

## Amendments / Supplements / Renewals

<p><b>I would like to have my <i>allgemeine bauaufsichtliche Zulassung</i> ('national technical approval') renewed. What do I have to submit?</b></p>	<p>You submit an application for a <a href="#">renewal of the approval</a> and the formulation according to our <a href="#">material data sheet</a>. In addition, for products which are subject to external surveillance according to the approval, a summary control report by the external body is required over the past period of surveillance (normally 5 years). You have to also submit a new emission test over 28 days, based on the then current LCI list. The <a href="#">break-off criteria</a> may be applied.</p>
<p><b>I have developed a new product which is similar to the products for which I already have an approval. Can I have the already existing approval changed and/or supplemented?</b></p>	<p>Basically, amendments / supplements / renewals are possible. You submit a <a href="#">request for amendment / renewal</a> together with the corresponding information (formulation, technical data, etc.). DIBt will then decide if the product can be regulated in the existing approval, whether any additional tests are possibly necessary or whether the product needs a separate approval.</p>
