Approval body for construction products and types of construction

Bautechnisches Prüfamt

An institution established by the Federal and Laender Governments

Designated according to Article 29 of Regulation (EU) No 305/2011 and member of EOTA (European Organisation for Technical Assessment)

European Technical Assessment ETA-04/0095 of 23 April 2015

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the European Technical Assessment:	Deutsches Institut für Bautechnik
Trade name of the construction product	Würth Injection System W-VIZ
Product family to which the construction product belongs	Torque controlled bonded anchor with anchor rod W-VIZ-A and internal threaded rod W-VIZ-IG for use in concrete
Manufacturer	Adolf Würth GmbH & Co. KG Reinhold Würth Straße 12-17 74653 Künzelsau
Manufacturing plant	Würth Herstellwerk W1, Deutschland
This European Technical Assessment contains	32 pages including 3 annexes which form an integral part of this assessment
This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of	Guideline for European technical approval of "Metal anchors for use in concrete", ETAG 001 Part 5: "Bonded anchors", April 2013, used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011.

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission according to Article 25 Paragraph 3 of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The Injection System W-VIZ is a torque controlled bonded anchor consisting of a cartridge with injection mortar WIT-VM 100, WIT-VIZ or WIT-Express and an anchor rod with expansion cones and external connection thread (type W-VIZ-A) or with internal connection thread (type W-VIZ-IG).

The load transfer is realised by mechanical interlock of several cones in the bonding mortar and then via a combination of bonding and friction forces in the anchorage ground (concrete).

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance of W-VIZ-A	See Annex C1 to C7
Displacements under tension and shear loads for W-VIZ-A	See Annex C8 and C9
Characteristic resistance of W-VIZ-IG	See Annex C10 to C12
Displacements under tension and shear loads for W-VIZ-IG	See Annex C12

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for Class A1
Resistance to fire	No performance determined (NPD)

3.3 Hygiene, health and the environment (BWR 3)

Not applicable.

3.4 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

3.5 Protection against noise (BWR 5)

Not applicable.

3.6 Energy economy and heat retention (BWR 6)

Not applicable.

3.7 Sustainable use of natural resources (BWR 7)

The sustainable use of natural resources was not investigated.

3.8 General aspects

The verification of durability is part of testing the essential characteristics. Durability is only ensured if the specifications of intended use according to Annex B are taken into account.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

According to Decision of the Commission of 24 June 1996 (96/582/EC) (OJ L 254 of 08.10.96 p. 62-65), the system of assessment and verification of constancy of performance (see Annex V and Article 65 Paragraph 2 to Regulation (EU) No 305/2011) given in the following table applies.

Product	Intended use	Level or class	System
Metal anchors for use in concrete (heavy-duty type)	For fixing and/or supporting concrete structural elements or heavy units such as cladding and suspended ceilings	—	1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 23 April 2015 by Deutsches Institut für Bautechnik

4	Mortar cartridge	Vinylester resin, styrene free, mixing ratio 1:10			

Requirements of the fastening screw or the threaded rod and nut

- Minimum screw-in depth L_{sdmin} see Table B8:
- The length of screw or the threaded rod must depending on the thickness of fixture t_{fix}, available thread length L_{th} (= maximum available thread length, see Table B8:) and the minimum screw-in depth L_{sdmin} be established.
- A_5 > 8 % ductility

Steel, zinc plated

- Minimum property class 8.8 according to EN ISO 898-1:2013 or EN ISO 898-2:2012

Stainless steel A4

- Material 1.4401; 1.4404; 1.4578; 1.4571; 1.4439; 1.4362 according to EN 10088:2005
- Minimum property class 70 according to EN ISO 3506:2009

High corrosion resistant steel (HCR)

- Material 1.4529; 1.4565 according to EN 10088:2005
- Minimum property class 70 according to EN ISO 3506:2009

Specifications of intended use

Injection System W-VIZ-A	**M8**	**M10**	**M12**	**M16**	**M20**	**M24**
Static or quasi-static action	✓					
Seismic action, category C1 and C2	-	✓	✓	✓	✓	✓
Cracked and non-cracked	✓					

Injection System W-VIZ-IG	**M6**	**M8**	**M10**	**M12**	**M16**	**M20**
Static or quasi-static action	✓					
Seismic action	-					
Cracked and non-cracked	✓					

Base materials:

- Reinforced or unreinforced normal weight concrete according to EN 206-1:2000
- Strength classes C20/25 to C50/60 according to EN 206-1:2000

Temperature Range:

- Temperature Range I: -40 °C to +80 °C (max short term temperature +80 °C and max long term temperature +50 °C)
- Temperature Range II: -40 °C to +120 °C (max short term temperature +120 °C and max long term temperature +72 °C)

Use conditions:

- Structures subject to dry internal conditions
  (zinc plated steel, stainless steel or high corrosion resistant steel).
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist
  (stainless steel or high corrosion resistant steel).
- Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions (high corrosion resistant steel).
  Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages under static or quasi-static actions are designed in accordance with:
  - ETAG 001, Annex C, design method A, Edition August 2010 or
  - CEN/TS 1992-4:2009, design method A
- Anchorages under seismic actions (cracked concrete) are designed in accordance with:
  - EOTA Technical Report TR 045, Edition February 2013
  - Anchorages shall be positioned outside of critical regions (e.g. plastic hinges) of the concrete structure.
  - Fastenings in stand-off installation or with a grout layer are not allowed.

Injection System W-VIZ	**Annex B1**
Intended Use Specifications	

Table B1: Installation conditions

- Anchor installation is carried out by appropriately qualified personnel and under the supervision of the construction manager.
- Water filled bore holes (where admissible) must not be polluted – otherwise the cleaning of the drill hole must be repeated.
- The anchor component installation temperature shall be at least +5 °C; during curing of the injection mortar the temperature of the concrete must not fall below -5 °C. Curing time must be observed prior to loading the anchor.

Anchor size W-VIZ-A			**M8**	**M10 and 75 M12**	**70 M12 and 80 M12 - M24**
Nominal diameter of drill hole	d_0	[mm]	< 14		≥ 14
Installation allowable in	dry concrete	-	yes		yes
	wet concrete	-	yes		yes
	water-filled hole	-	**no**		yes
Hole drilling by	Hammer drill bit	-	yes		yes
	Diamond drill bit (not under seismic action)	-	**no**	yes	yes
Anchor size W-VIZ-IG			**M6 – M8**		**M10 – M20**
Nominal diameter of drill hole	d_0	[mm]	< 14		≥ 14
Installation allowable in	dry concrete	-	yes		yes
	wet concrete	-	yes		yes
	water-filled hole	-	**no**		yes
Hole drilling by	Hammer drill bit	-	yes		yes
	Diamond drill bit	-	**no**		yes

Non-cracked concrete													
Minimum spacing	s_{min}	[mm]	50	60	60	60	60	80	80	80	80	105	105
Minimum edge distance	c_{min}	[mm]	50	60	60	60	60	80	80	80	80	105	105

[1)] The remote face of the concrete member shall be inspected to ensure there has been no break-through by drilling. In case of break-through, the ground of the drill hole shall be closed with high strength mortar. The full bonded length h_{ef} shall be achieved and any potential loss of injection mortar shall be compensated.

[2)] For an edge distance c ≥ 80 mm a minimum spacing s_{min} = 55 mm is applicable.

Injection System W-VIZ	Annex B4
Intended Use Minimum spacing and edge distance, **W-VIZ-A**	

Deutsches Institut für Bautechnik DIBt

Installation instructions W-VIZ-A

Making and cleaning of hammer drilled holes

1	Pre-setting installation **V**		Use Hammer drill or air drill with drill bit and depth gauge. Drill perpendicular to concrete surface.
	Through-setting installation **D**		**Drill hole must be cleaned directly prior to installation of the anchor.** It must be ensured that icing does not occur in the drill hole.
2	**V**		**W-VIZ-A M8 - M16:** Blow out drill hole from the bottom with Blow-out pump at least two times. The Extension Tube with reduced diameter must be added to the Blow-out pump for the diameter M8.
			**W-VIZ-A M20 - M24:** Connect Air Blower to compressed air (min. 6 bar, oil-free). Open air valve and blow out drill hole along the entire depth with back and forth motion at least two times.
	D		**W-VIZ-A M10 - M16:** Blow out drill hole from the bottom with Blow-out pump at least two times.
			**W-VIZ-A M20 - M24:** Connect Air Blower to compressed air (min. 6 bar, oil-free). Open air valve and blow out drill hole along the entire depth with back and forth motion at least two times.
3	**V**		Check diameter of cleaning brush. If brush can be pushed into the drill hole without any resistance, it must be replaced. Chuck brush into drill machine. Turn on drill machine. Brush drill hole back and forth along the entire drill hole depth at least two times while rotated by drill machine.
	D		
4	**V**		**W-VIZ-A M8 - M16:** Blow out drill hole from the bottom with Blow-out pump at least two times. The Extension Tube with reduced diameter must be added to the Blow-out pump for the diameter M8.
			**W-VIZ-A M20 - M24:** Connect Air Blower to compressed air (min. 6 bar, oil-free). Open air valve and blow out drill hole along the entire depth with back and forth motion at least two times.
	D		**W-VIZ-A M10 - M16:** Blow out drill hole from the bottom with Blow-out pump at least two times.
			**W-VIZ-A M20 - M24:** Connect Air Blower to compressed air (min. 6 bar, oil-free). Open air valve and blow out drill hole along the entire depth with back and forth motion at least two times.

Injection System W-VIZ	**Annex B5**
Intended Use Installation instructions **W-VIZ-A** Making and cleaning of hammer drilled holes	

Deutsches Institut für Bautechnik DIBt

Making and cleaning of diamond core drilled holes

1	Pre-setting installation **V**		Use diamond drill with diamond drill bit and depth gauge. Drill perpendicular to concrete surface.
	Through-setting installation **D**		**Drill hole must be cleaned directly prior to installation of the anchor.** It must be ensured that icing does not occur in the drill hole.
2	**V**		Remove drill core at least up to the nominal hole depth and check drill hole depth.
	D		
3	**V**		Flushing of drill hole: Flush drill hole with water, starting from the bottom, until clear water gets out of the drill hole.
	D		
4	**V**		Connect Air Blower to compressed air (min. 6 bar, oil-free). Open air valve and blow out drill hole along the entire depth with back and forth motion at least two times.
	D		

Injection System W-VIZ	**Annex B6**
Intended Use Installation instructions **W-VIZ-A** Making and cleaning of diamond core drilled holes	

Injection

5	D + V		Check expiration date on WIT-VM 100, WIT-VIZ or WIT-Express cartridge. Never use when expired. Remove cap from cartridge. Screw Mixer Nozzle on cartridge. When using a new cartridge always use a new Mixer Nozzle. Never use cartridge without Mixer Nozzle and never use Mixer Nozzle without helix inside.
6	D + V		Insert cartridge in Dispenser. Before injecting discard mortar (at least 2 full strokes or a line of 10 cm) until it shows a consistent grey colour. Never use this mortar.
7	V		Prior to injection, check if Mixer Nozzle reaches the bottom of the drill hole. If it does not reach the bottom, plug Mixer Extension onto Mixer Nozzle in order to fill the drill hole properly. Fill hole with a sufficient quantity of injection mortar. Start from the bottom of the drill hole and work out to avoid trapping air pockets.
	D		

Insertion of anchor rod

8	V		Insert the anchor rod W-VIZ-A by hand, rotating slightly up to the full embedment depth as marked on the anchor rod. The anchor rod is properly set when excess mortar seeps from the hole. If the hole is not completely filled, pull out anchor rod, let mortar cure, drill out hole and repeat entire cleaning process.
	D		Insert the anchor rod W-VIZ-A by hand, rotating slightly up to the full embedment depth. After the installation, the annular gap in the clearance hole in the fixture has to be filled completely by excess mortar. If the hole is not completely filled, pull out anchor rod, let mortar cure, drill out hole and repeat entire cleaning process.
9	V		Follow minimum curing time shown in Table B2 or Table B3 During curing time, anchor rod must not be moved or loaded.
	D		
10	V		Remove excess mortar.
	D		
11	D + V		The fixture can be mounted after curing time. Apply installation torque T_{inst} according to Table B4 or Table B5 by using torque wrench.

Injection System W-VIZ	**Annex B7**
Intended Use Installation instructions **W-VIZ-A** Anchor installation	

Deutsches Institut für Bautechnik DIBt

Installation instructions <u>W-VIZ-A 75 M12</u>

Through-setting installation with clearance between concrete and anchor plate

Work step 1-7 as illustrated in Annexes B5 – B7		
Requirement: Diameter of clearance hole in the fixture $d_f \leq$ 14 mm		
8		Insert the anchor rod W-VIZ-A by hand, rotating slightly up to the full embedment depth.
9		Check if excess mortar seeps from the hole. If the hole is not completely filled, pull out anchor rod, let mortar cure, drill out hole and repeat the entire cleaning process. **The annular gap in the fixture does not have to be filled.**
10		During curing time according to Table B2 or Table B3 anchor rod must not be moved or loaded.
11		Washer and nut can be mounted after curing time and backfilling of anchor plate. Apply installation torque T_{inst} according to Table B4 by using torque wrench.

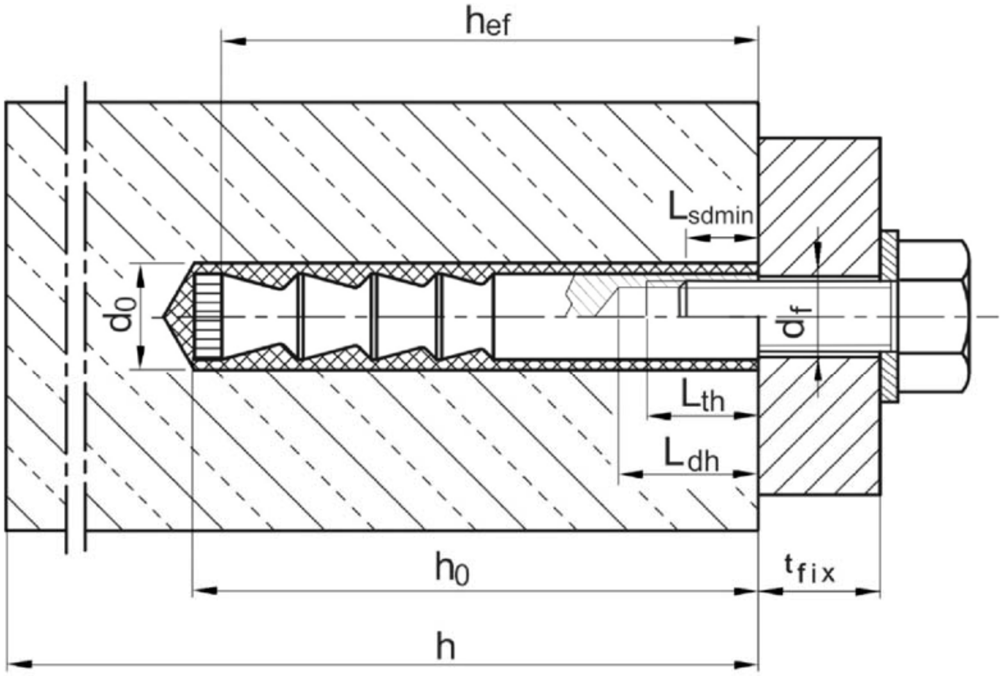
[1)] The remote face of the concrete member shall be inspected to ensure there has been no break-through by drilling. In case of break-through the ground of the drill hole shall be closed with high strength mortar. The full bonded length h_{ef} shall be achieved and any potential loss of injection mortar shall be compensated.



Injection System W-VIZ	**Annex B9**
Intended Use Installation parameters W-VIZ-IG	

Installation instructions W-VIZ-IG

Making and cleaning of hammer drilled holes

1		Use Hammer drill or air drill with drill bit and depth gauge. Drill perpendicular to concrete surface. **Drill hole must be cleaned directly prior to installation of the anchor.** It must be ensured that icing does not occur in the drill hole.
2		**W-VIZ-IG M6 - M12:** Blow out drill hole from the bottom with Blow-out pump at least two times. The Extension Tube with reduced diameter must be added to the Blow-out pump for the diameter M6.
		**W-VIZ-IG M16 - M20:** Connect Air Blower to compressed air (min. 6 bar, oil-free). Open air valve and blow out drill hole along the entire depth with back and forth motion at least two times.
3		Check diameter of Cleaning Brush. If brush can be pushed into the drill hole without any resistance, it must be replaced. Chuck brush into drill machine. Turn on drill machine. Brush drill hole back and forth along the entire drill hole depth at least two times while rotated by drill machine.
4		**W-VIZ-IG M6 - M12:** Blow out drill hole from the bottom with Blow-out pump at least two times. The Extension Tube with reduced diameter must be added to the Blow-out pump for the diameter M6.
		**W-VIZ-IG M16 - M20:** Connect Air Blower to compressed air (min. 6 bar, oil-free). Open air valve and blow out drill hole along the entire depth with back and forth motion at least two times.

Making and cleaning of diamond drilled holes

1		Use diamond drill with diamond drill bit and depth gauge. Drill perpendicular to concrete surface. **Drill hole must be cleaned directly prior to installation of the anchor.** It must be ensured that icing does not occur in the drill hole.
2		Remove drill core at least up to the nominal hole depth and check drill hole depth.
3		Flushing of drill hole: Flush drill hole with water, starting from the bottom, until clear water gets out of the drill hole.
4		Connect Air Blower to compressed air (min. 6 bar, oil-free). Open air valve and blow out drill hole along the entire depth with back and forth motion at least two times.

Injection System W-VIZ	**Annex B10**
Intended Use Installation instructions W-VIZ-IG Drilling and cleaning	

Injection

5		Check expiration date on WIT-VM 100, WIT-VIZ or WIT-Express cartridge. Never use when expired. Remove cap from cartridge. Screw Mixer Nozzle on cartridge. When using a new cartridge always use a new Mixer Nozzle. Never use cartridge without Mixer Nozzle and never use Mixer Nozzle without helix inside.
6		Insert cartridge in dispenser. Before injecting discard mortar (at least 2 full strokes or a line of 10 cm) until it shows a consistent grey colour. Never use this mortar.
7		Prior to injection, check if Mixer Nozzle reaches the bottom of the drill hole. If it does not reach the bottom, plug Mixer Extension onto Mixer Nozzle in order to fill the drill hole properly. Fill cleaned drill hole with a sufficient quantity of injection mortar. Start from the bottom of the drill hole and work out to avoid trapping air pockets.

Setting of anchor

8		Insert the anchor rod W-VIZ-IG by hand, rotating slightly up to about 1mm below the concrete surface in the drill hole. The anchor rod is properly set when excess mortar seeps from the hole. If the hole is not completely filled, pull out anchor rod, let mortar cure, drill out hole and repeat the entire cleaning process.
9		Follow minimum curing time shown in Table B2 and Table B3. During curing time anchor rod must not be moved or loaded.
10		Remove excess mortar.
11		The fixture can be mounted after curing time. Apply installation torque T_{inst} according to Table B8 by using torque wrench.

Displacement	δ_{N0}	[mm]	0,5		0,5	0,6	0,6		0,7			0,7	0,8	0,8
	$\delta_{N\infty}$	[mm]	1,3									1,1	1,3	1,3
Tension load in **non-cracked** concrete	N	[kN]	4,3	8,5	11,1	15,6	14,1	17,2	20,5	25,9	33,0	29,6	53,3	53,3
Displacement	δ_{N0}	[mm]	0,2	0,4	0,4		0,4		0,6			0,5	0,6	0,6
	$\delta_{N\infty}$	[mm]	1,3									1,1	1,3	1,3

Table C19: **Displacements** under **shear loads, W-VIZ-IG**

Anchor size W-VIZ-IG			**40 M6**	**50 M6**	**60 M8**	**75 M8**	**70 M10**	**80 M10**	**90 M12**	**105 M12**	**125 M12**	**115 M16**	**170 M16**	**170 M20**
Shear load **Steel, zinc plated**	V	[kN]	4,6		5,4	8,4	10,1		19,3			14,8	35,8	30,7
Displacement	δ_{V0}	[mm]	0,4		0,5	0,4	0,5		1,2			0,8	1,9	1,2
	$\delta_{V\infty}$	[mm]	0,7		0,8	0,7	0,8		1,9			1,2	2,8	1,9
Shear load **Stainless steel A4 / HCR**	V	[kN]	3,2		5,4	5,9	9,3		13,5			18,5	25,2	26,9
Displacement	δ_{V0}	[mm]	0,3		0,5	0,3	0,5		0,9			1,0	1,4	1,1
	$\delta_{V\infty}$	[mm]	0,4		0,7	0,5	0,7		1,4			1,5	2,1	1,6

Injection System W-VIZ

Performance
Characteristic values for **shear load, W-VIZ-IG**, **cracked and non-cracked concrete**
(Design method A according to ETAG 001, Annex C or CEN/TS 1992-4), **Displacements**

Annex C12
