Approval body for construction products and types of construction
Bautechnisches Prüfamt
An institution established by the Federal and Laender Governments

Designated according to Article 29 of Regulation (EU) No 305/2011 and member of EOTA (European Organisation for Technical Assessment)

European Technical Assessment

ETA-15/0440 of 6 July 2015

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the European Technical Assessment:	Deutsches Institut für Bautechnik
Trade name of the construction product	fischer injection system FIS EB
Product family to which the construction product belongs	Bonded anchor for use in concrete
Manufacturer	fischerwerke GmbH & Co. KG Otto-Hahn-Straße 15 79211 Denzlingen DEUTSCHLAND
Manufacturing plant	fischerwerke
This European Technical Assessment contains	27 pages including 3 annexes which form an integral part of this assessment
This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of	Guideline for European technical approval of "Metal anchors for use in concrete", ETAG 001 Part 5: "Bonded anchors", April 2013, used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011.

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The fischer injection system FIS EM is a bonded anchor consisting of a cartridge with injection mortar fischer FIS EM and a steel element. The steel element consist of

- a threaded rod with washer and hexagon nut of sizes M8 to M30 or
- a reinforcing bar of sizes ϕ = 8 to 40 mm or

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic values under static and quasi-static action for design according to TR 029 or CEN/TS 1992-4:2009, Displacements	See Annex C 1 to C 8
Characteristic values for seismic performance categories C1 and C2 for design according to Technical Report TR 045, Displacements	See Annex C 9 to C 12

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for Class A1
Resistance to fire	No performance assessed

3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

3.4 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

3.5 Protection against noise (BWR 5)

Not applicable.

3.6 Energy economy and heat retention (BWR 6)

Not applicable.

3.7 Sustainable use of natural resources (BWR 7)

The sustainable use of natural resources was not investigated.

3.8 General aspects

The verification of durability is part of testing the essential characteristics. Durability is only ensured if the specifications of intended use according to Annex B are taken into account.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

According to Decision of the Commission of 24 June 1996 (96/582/EC) (OJ L 254 of 08.10.96 p. 62-65), the system of assessment and verification of constancy of performance (see Annex V and Article 65 Paragraph 2 to Regulation (EU) No 305/2011) given in the following table applies.

Product	Intended use	Level or class	System
Metal anchors for use in concrete (heavy-duty type)	For fixing and/or supporting concrete structural elements or heavy units such as cladding and suspended ceilings	—	1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 6 July 2015 by Deutsches Institut für Bautechnik

Annex A 3

Deutsches Institut für Bautechnik DIBt

Specifications of intended use (part 1)

Table B1: Overview use categories and performance categories

Anchorages subject to		FIS EB with ...			
		Threaded rod 		Reinforcing bar 	
Hammer drilling		all sizes			
Diamond drilling		all sizes			
Static and quasi static load, in	un-cracked concrete	all sizes	Tables: C1, C2, C5, C6	all sizes	Tables: C3, C4, C7, C8
	cracked concrete				
Seismic performance category (only hammer drilling)	C1	M10 – M30	Table C9	ϕ 10 - ϕ 32	Table C10
	C2	M12, M16, M20, M24	Table C11	--	--
Use category	Dry or wet concrete	all sizes			
	Flooded hole	all sizes			
Installation temperature		+5°C to +40°C			
In-service temperature	Temperature range	-40°C to +72°C		(max. long term temperature +50°C and max. short term temperature +72°C)	

Base materials:
- Reinforced or unreinforced normal weight concrete according to EN 206-1:2013
- Strength classes C20/25 to C50/60 according to EN 206-1:2013

Use conditions (Environmental conditions):
- Structures subject to dry internal conditions (zinc coated steel, stainless steel)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist (stainless steel)
  Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

Deutsches Institut für Bautechnik DIBt

Specifications of intended use (part 2)

Design:

- Anchorages have to be designed under the responsibility of an engineer experienced in anchorages and concrete work
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.)
- Anchorages under static or quasi-static actions are designed in accordance with EOTA Technical Report TR 029 "Design of bonded anchors" Edition September 2010 or CEN/TS 1992-4:2009
- Anchorages under seismic actions (cracked concrete) have to be designed in accordance with:
  - EOTA Technical Report TR 045 "Design of Metal Anchors under Seismic Action", Edition February 2013
  - Anchorages shall be positioned outside of critical regions (e.g. plastic hinges) of the concrete structure.
  - Fastenings in stand-off installation or with a grout layer are not allowed.

Installation:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- In case of aborted hole: The hole shall be filled with mortar
- Marking and keeping the effective anchorage depth
- Overhead installation is allowed

Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled:

- Materials, dimensions and mechanical properties according to Annex A 3, Table A1
- Inspection certificate 3.1 according to EN 10204:2004, the documents should be stored
- Marking of embedment depth

fischer injection system FIS EB	Annex B 2
Intended Use Specifications (part 2)

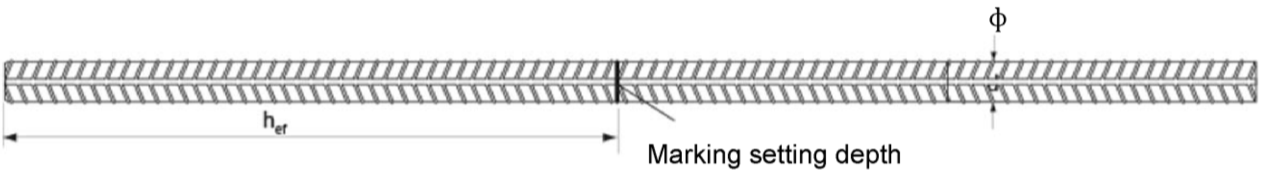
Minimum thickness of concrete member	h_{min}	[mm]	$h_{ef} + 2d_0$								

Reinforcing bar



- Minimum value of related rip area $f_{R,min}$ according to EN 1992-1-1:2004+AC:2010
- The rib height h must be $0{,}05 \cdot \phi \leq h \leq 0{,}07 \cdot \phi$
  (ϕ = nominal bar size, h = Rip height of the bar)

Table B4: Parameters of steel brush FIS BS Ø

Drill bit diameter	[mm]	12	14	16	18	20	24	25	28	30	32	35	40	45	55
Steel brush diameter d_b	[mm]	14	16	20		25	26	27	30	40			42	47	58

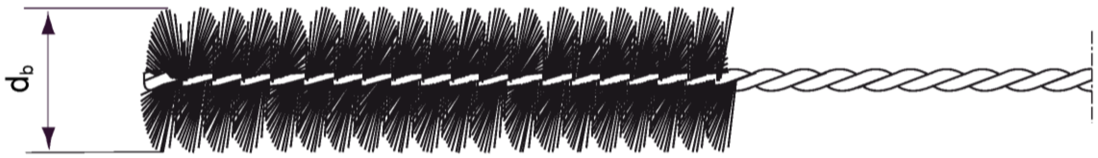


Table B5: Maximum processing time of the mortar and minimum curing time

System temperature [°C]	Maximum processing time [minutes]	Minimum curing time[1)] [hours]
+5 to +10	120	45
≥ +10 to +20	30	22
≥ +20 to +30	14	12
≥ +30 to +40	7	6

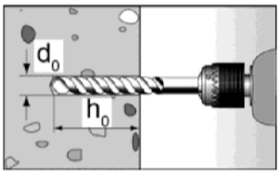
1) In wet concrete or flooded holes the curing times must be doubled.

fischer injection system FIS EB	Annex B 5
Intended Use Cleaning tools Processing times and curing times	

Installation instructions part 1

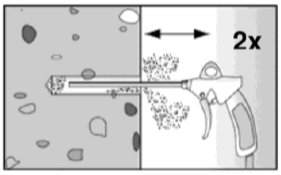
Drilling and cleaning the hole (hammer-drilling)

1



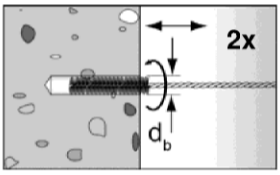
Drill the hole.
Drill hole diameter $\mathbf{d_0}$ and drill hole depth $\mathbf{h_0}$ see **Tables B2, B3**.

2



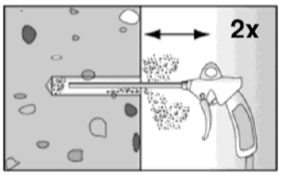
Clean the drill hole: Blow out the drill hole two times, using oil-free compressed air ($p \geq 6$ bar)

3



Brush the drill hole two times. For drill hole diameter ≥ 30 mm use a power drill. For deep holes use an extension. Corresponding brushes see **Table B4**

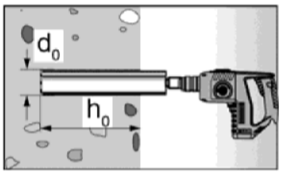
4



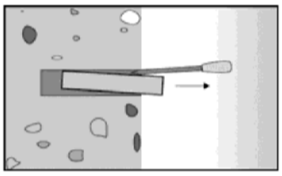
Clean the drill hole: Blow out the drill hole two times, using oil-free compressed air ($p \geq 6$ bar)

Drilling and cleaning the hole (diamond-drilling)

1

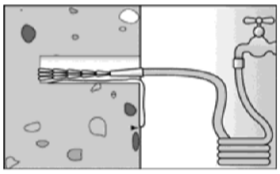


Drill the hole.
Drill hole diameter $\mathbf{d_0}$ and drill hole depth $\mathbf{h_0}$ see **Tables B2, B3.**



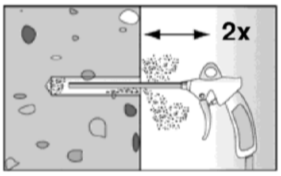
Break the drill core and draw it out.

2



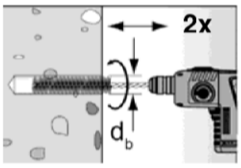
Flush the drill hole until the water comes clear.

3



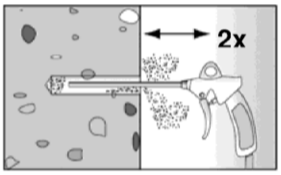
Blow out the drill hole two times, using oil-free compressed air ($p > 6$ bar)

4



Brush the drill hole two times using a power drill. Corresponding brushes see **Table B4**

5



Blow out the drill hole two times, using oil-free compressed air ($p > 6$ bar)

fischer injection system FIS EB

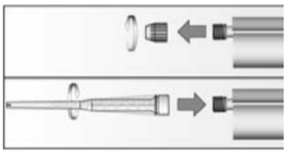
Intended use
Installation instructions part 1

Annex B 6

Installation instructions part 2

Preparing the cartridge

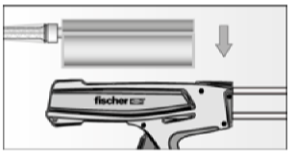
5

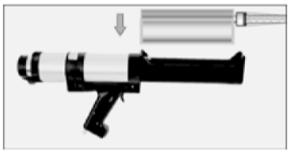


Twist off the sealing cap

Twist on the static mixer (the spiral in the static mixer must be clearly visible).

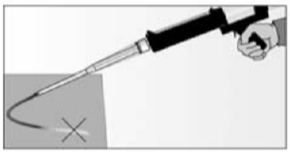
6





Place the cartridge into the dispenser.

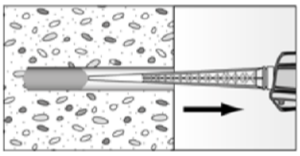
7



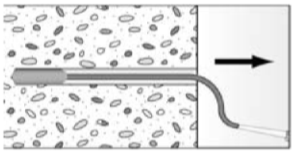
Press approx. 10 cm of material out until the resin is evenly grey in colour. Don`t use mortar that is not uniformly grey.

Injection of the mortar

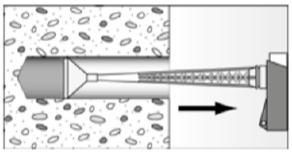
8



Fill approx. 2/3 of the drill hole with mortar. Always begin from the bottom of the hole and avoid bubbles.



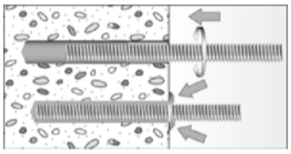
For drill hole depth ≥ 150 mm use an extension tube.



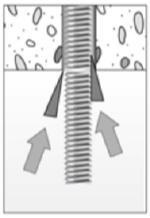
For overhead installation, deep holes h_0 > 250 mm or drill hole diameter d_0 ≥ 40 mm use an injection-adapter.

Installation threaded rods

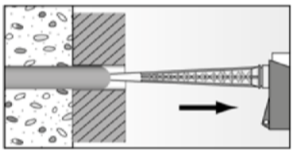
9



Only use clean and oil-free anchor elements. Mark the setting depth of the anchor. Press the threaded rod down to the bottom of the hole, turning it slightly while doing so. After inserting the anchor element, excess mortar must emerge around the anchor element.



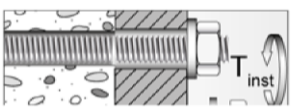
For overhead installations support the threaded rod with wedges.



For push through installation fill the annular clearance with mortar.

10

Wait for the specified curing time, t_{cure} see **Table B5**.



Mounting the fixture $T_{inst,max}$ see **Table B2.**

fischer injection system FIS EB	**Annex B 7**
Intended use Installation instructions part 2	

Installation instructions part 3
Installation reinforcing bars

9		Only use clean and oil-free reinforcing bars. Mark the setting depth of the reinforcing bar. Using a turning movement, push the reinforcement bar vigorously into the filled hole up to the insertion depth marking.
		When reaching the setting depth mark, excess mortar must emerge from the mouth of the drill hole.
10		Wait for the specified curing time t_{cure} see **Table B5**.
