#### European Technical Assessment ETA-99/0011 English translation prepared by DIBt

#### Specific Part

#### 1 Technical description of the product

The Würth Fixanchor W-FAZ and W-FAZ-IG is an anchor made of galvanised steel or made of stainless steel or high corrosion resistant steel which is placed into a drilled hole and anchored by torque-controlled expansion. The following anchor types are covered:

- Anchor type W-FAZ with external thread, washer and hexagon nut, sizes M8 to M27,
- Anchor type W-FAZ-IG S with internal thread, hexagon head nut and washer S-IG, sizes M6 to M12,
- Anchor type W-FAZ-IG SK with internal thread, countersunk head screw and countersunk washer SK-IG, sizes M6 to M12,
- Anchor type W-FAZ-IG B with internal thread, hexagon nut and washer B-IG, sizes M6 to M12.

The product description is given in Annex A.

# 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

#### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance for static and quasi static action for W-FAZ	See Annex C 1 to C 5
Characteristic resistance for seismic performance categories C1 and C2 for W-FAZ	See Annex C 6
Characteristic resistance for static and quasi static action for W-FAZ-IG	See Annex C 10 to C 12
Displacements under tension loads for W-FAZ	See Annex C 8
Displacements under shear loads for W-FAZ	See Annex C 9
Displacements under tension and shear loads for W-FAZ-IG	See Annex C 14

## European Technical Assessment

ETA-99/0011

#### Page 4 of 32 | 4 March 2015

English translation prepared by DIBt

#### 3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for Class A1
Resistance to fire for W-FAZ	See Annex C 7
Resistance to fire for W-FAZ-IG	See Annex C 13

**3.3** Hygiene, health and the environment (BWR 3)

Not applicable.

#### 3.4 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

#### 3.5 Protection against noise (BWR 5)

Not applicable.

# 3.6 Energy economy and heat retention (BWR 6)

Not applicable.

### 3.7 Sustainable use of natural resources (BWR 7)

The sustainable use of natural resources was not investigated.

#### 3.8 General aspects

The verification of durability is part of testing the essential characteristics. Durability is only ensured if the specifications of intended use according to Annex B are taken into account.

# 4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

According to Decision of the Commission of 24 June 1996 (96/582/EC) (OJ L 254 of 08.10.96 p. 62-65), the system of assessment and verification of constancy of performance (see Annex V and Article 65 Paragraph 2 to Regulation (EU) No 305/2011) given in the following table applies.

Product	Intended use	Level or class	System
Metal anchors for use in concrete (heavy-duty type)	For fixing and/or supporting concrete structural elements or heavy units such as cladding and suspended ceilings	_	1

#### European Technical Assessment ETA-99/0011 English translation prepared by DIBt

Page 5 of 32 | 4 March 2015

# 5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 04 March 2015 by Deutsches Institut für Bautechnik

<sup>1)</sup> only for standard anchorage depth
 <sup>2)</sup> only cold formed anchors acc. to Annex A3

#### **Base materials:**

- Reinforced or unreinforced normal weight concrete according to EN 206-1: 2000
- Strength classes C20/25 to C50/60 according to EN 206-1: 2000

#### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (zinc plated steel, stainless steel or high corrosion resistant steel).
- Structures subject to external atmospheric exposure including industrial and marine environment or exposure to
  permanently damp internal condition, if no particular aggressive conditions exist
  (stainless steel or high corrosion resistant steel).
- Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions (high corrosion resistant steel)

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used.)

#### Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages under static or quasi-static actions are designed in accordance with:
  - ETAG 001, Annex C, design method A, Edition August 2010 or
  - CEN/TS 1992-4: 2009, design method A
- Anchorages under seismic actions (cracked concrete) are designed in accordance with:
  - EOTA Technical Report TR 045, Edition February 2013
    - Anchorages shall be positioned outside of critical regions (e.g. plastic hinges) of the concrete structure
  - Fastenings in stand-off installation or with a grout layer are not allowed
- Anchorages under fire exposure are designed in accordance with:
  - ETAG 001, Annex C, design method A, Edition August 2010 and EOTA Technical Report TR 020, Edition May 2004 or
  - CEN/TS 1992-4: 2009, Annex D (It must be ensured that local spalling of the concrete cover does not occur)

#### Intended use

Minimum spacings and edge distances for standard anchorage depth

### Installation instructions W-FAZ

The fitness for use of the anchor can only be assumed if the anchor is installed as follows:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site,
- Use of the anchor only as supplied by the manufacturer without exchanging the components of the anchor.
  Checks before placing the anchor to ensure that the strength class of the concrete in which the anchor is to be placed is in the range given and is not lower than that of the concrete to which the characteristic loads apply
- Check of concrete being well compacted, e.g. without significant voids,
- Edge distances and spacing not less than the specified values without minus tolerances.

#### Performance

Characteristic values for **shear loads**, **W-FAZ-IG**, **cracked and non-cracked concrete**, static and quasi-static action

#### Table C13: Characteristic values for tension and shear load under fire exposure, W-FAZ-IG cracked and non-cracked concrete C20/25 to C50/60 M6 M8 M10 M12 Anchor size **Tension load** Steel failure Steel zinc plated 0.7 2.5 R30 1.4 3.7 R60 0.6 2.0 1.2 2.9 Characteristic $N_{\mathsf{Rk},\mathsf{s},\mathsf{fi}}$ [kN] resistance R90 0.5 0.9 1.5 2.2 R120 0.4 0.8 1.3 1.8 Stainless steel A4, HCR 2.9 5.4 8.7 12.6 R30 Characteristic R60 1.9 3.8 6.3 9.2 $N_{\mathsf{R}k,s,\mathsf{fi}}$ [kN] resistance R90 1.0 2.1 3.9 5.7 0.5 2.7 R120 1.3 4.0 Shear load Steel failure without lever arm Steel zinc plated R30 0.7 1.4 2.5 3.7 R60 1.2 2.0 2.9 Characteristic 0.6 $V_{\mathsf{R}k,s,\mathsf{fi}}$ [kN] resistance R90 0.5 0.9 1.5 2.2 R120 0.4 0.8 1.3 1.8 Stainless steel A4, HCR 2.9 5.4 8.7 12.6 R30 R60 1.9 3.8 9.2 6.3 Characteristic $V_{\mathsf{R}\mathsf{k},\mathsf{s},\mathsf{f}\mathsf{i}}$ [kN] resistance R90 1.0 2.1 3.9 5.7 R120 0.5 1.3 2.7 4.0 Steel failure with lever arm Steel zinc plated R30 0.5 1.4 3.3 5.7 0.4 1.2 2.6 R60 4.6 Characteristic M<sup>0</sup><sub>Rk,s,fi</sub> [Nm] resistance R90 0.4 0.9 2.0 3.4 R120 0.3 1.6 2.8 0.8 Stainless steel A4, HCR 2.2 19.6 R30 5.5 11.2 R60 1.5 3.9 8.1 14.3 Characteristic M<sup>0</sup><sub>Rk,s,fi</sub> [Nm] resistance 0.7 R90 2.2 5.1 8.9 R120 0.4 3.5 6.2 1.3

The characteristic resistance for pull-out failure, concrete cone failure, concrete pry-out failure and concrete edge failure can be designed according to TR020 / CEN/TS 1992-4.

# Würth Fixanchor W-FAZ-IG

#### Performance

Characteristic values for tension and shear loads under fire exposure, W-FAZ-IG cracked and non-cracked concrete C20/25 to C50/60

# Table C14: Displacements under tension load, W-FAZ-IG

Anchor size			M6	M8	M10	M12
Tension load in cracked concrete	Ν	[kN]	2.0	3.6	4.8	8.0
Dianla comonto	δ <sub>N0</sub>	[mm]	0.6	0.6	0.8	1.0
Displacements	$\delta_{N^{\infty}}$	[mm]	0.8	0.8	1.2	1.4
Tension load in non-cracked concrete	Ν	[kN]	4.8	6.4	8.0	12.0
Displacements	δ <sub>N0</sub>	[mm]	0.4	0.5	0.7	0.8
	$\delta_{N\infty}$	[mm]	0.8	0.8	1.2	1.4

# Table C15: Displacements under shear load, W-FAZ-IG

Anchor size			M6	M8	M10	M12
Shear load in cracked and non-cracked concrete	V	[kN]	4.2	5.3	6.2	16.9
Dianlagomente	δ <sub>vo</sub>	[mm]	2.8	2.9	2.5	3.6
Displacements	$\delta_{V\!\infty}$	[mm]	4.2	4.4	3.8	5.3

### Würth Fixanchor W-FAZ-IG

#### **Performance** Displacements under tension load and under shear load
