English translation prepared by DIBt

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The Simpson Strong-Tie® - Screw Anchor THD is an anchor made of galvanised or mechanically zinc coated steel of sizes 8, 10, 12, 16 and 20. The anchor is screwed into a predrilled cylindrical drill hole. The special thread of the anchor cuts an internal thread into the member while setting. The anchorage is characterised by mechanical interlock in the special thread.

Product and product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

| Essential characteristic | | | Performance | | | |
|---|---------------|-------|-----------------------|--|--|--|
| Characteristic values and tension and shear loads | Displacements | under | See Annex C 1 and C 2 | | | |

3.2 Safety in case of fire (BWR 2)

| Essential characteristic | Performance |
|--------------------------|---|
| Reaction to fire | Anchorages satisfy requirements for Class A1 |
| Resistance to fire | See Annex C 3 and C 4 |

3.3 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

Assessment and verification of constancy of performance (AVCP) system applied, with 4 reference to its legal base

In accordance with guideline for European technical approval ETAG 001, April 2013 used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

European Technical Assessment ETA-12/0060 English translation prepared by DIBt

Page 4 of 14 | 8 December 2016

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 8 December 2016 by Deutsches Institut für Bautechnik

| Product description | |
| Materials and dimensions | |

Specifications of intended use

Anchorages subject to:

- · Static and quasi-static loads: All sizes and emdedment depths.
- · Fire exposure: All sizes and emdedment depths.

Base materials:

- Cracked and non-cracked concrete.
- Reinforced or unreinforced normal weight concrete of strength classes C20/25 to C50/60 according to EN 206-1: 2000

Use conditions (Environmental conditions):

• Structures subject to dry indoor conditions.

Design:

- Anchorages are to be designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- · Anchorages under static or quasi-static actions are to be designed in accordance with:
 - ETAG 001, Annex C, design method A, Edition August 2010 or
 - CEN/TS 1992-4:2009, design method A
- Anchorages under fire exposures are to be designed in accordance with:
 - EOTA Technical Report TR 020, Edition Mai 2004 or
 - CEN/TS 1992-4:2009, Annex D
 - It must be ensured that local spalling of the concrete cover does not occur.

Installation:

- Screw installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Use of the screw only as supplied by the manufacturer.
- · Screw installation in accordance with manufacturer's specifications and drawings.
- Edge distances and spacings not less than the specified values without minus tolerances.
- Hole drilling by hammer-drilling.
- Cleaning of the drill hole
- In case of aborted hole, drilling of new hole at a minimum distance of twice the depth of the aborted hole, or smaller distance provided the aborted drill hole is filled with high strength non-shrinkage mortar. No shear or oblique tension loads are allowed in the direction of a not filled aborted hole.
- The fixture is fully pressed on the concrete surface without intermediate layers.
- · After installation further turning of the screw is not possible.
- · The head of the screw is fully supported on the fixture and is not damaged.
- The screw may be used only once.

| R30R120 | | k | [-] | | | 2 | | |
| Concrete edge failure | | | | | | | | |

The initial value $V^0_{Rk,c,fi}$ of the characteristic resistance in concrete C20/25 to C50/60 under fire exposure may be determined by:

$$V_{Rk,c,fi}^{0} = 0.25 \times V_{Rk,c}^{0} (\le R90)$$

$$V_{Rk,c,fi}^{0} = 0.25 \times V_{Rk,c}^{0}$$
 (R120)

With $V^0_{Rk,c}$ equal to the characteristic resistance in non-cracked concrete C20/25 under normal temperatures.

In absence of other national regulations a partial safety factor for resistance under fire exposure of $\gamma_{M,fi}$ = 1,0 is recommended.
