Guideline for European technical approval of "Metal  
anchors for use in concrete", ETAG 001 Part 5: "Bonded  
anchors", April 2013,  
used as European Assessment Document (EAD)  
according to Article 66 Paragraph 3 of Regulation (EU)  
No 305/2011.

**European Technical Assessment**

**ETA-13/0612**

English translation prepared by DIBt

**Page 2 of 22 | 5 July 2016**

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

**Specific Part****1 Technical description of the product**

The DRIZORO S.A.U. MAXFIX-ER Injection Adhesive is a bonded anchor consisting of a cartridge with injection mortar MAXFIX-ER and a steel element. The steel elements are either

- Threaded rods in the range of M 12 to M 27 or
- Reinforcing bar in the range of  $\phi$  12 to  $\phi$  25 mm

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

**2 Specification of the intended use in accordance with the applicable European Assessment Document**

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

**3 Performance of the product and references to the methods used for its assessment****3.1 Mechanical resistance and stability (BWR 1)**

Essential characteristic	Performance
Characteristic resistance tension and shear loads	See Annex C 1 to C 4
Displacements under tension and shear loads	See Annex C 5 to C 6

**3.2 Safety in case of fire (BWR 2)**

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for Class A1
Resistance to fire	No performance assessed

**3.3 Hygiene, health and the environment (BWR 3)**

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply..

**3.4 Safety in use (BWR 4)**

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

**European Technical Assessment**

**ETA-13/0612**

English translation prepared by DIBt

**Page 4 of 22 | 5 July 2016**

**4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

In accordance with guideline for European technical approval ETAG 001, April 2013 used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

**5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD**

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Issued in Berlin on 5 July 2016 by Deutsches Institut für Bautechnik

### DRIZORO S.A.U. MAXFIX-ER Injection Adhesive

#### Product description

Materials - Threaded rod

#### Annex A3

## MAXFIX-ER Epoxy Adhesive

Table A2: Reinforcing bar

Designation	Material
Rebar according EN 1992-1-1:2004 + AC:2010, Annex C	Bars and de-coiled rods class B or C $f_{yk}$ and k according to NDP or NCL of EN 1992-1-1/NA:2013 $f_{uk} = f_{tk} = k \cdot f_{yk}$

## Specication of intended use

### Anchorage subject to:

- Static or quasi-static action
- Cracked concrete
- Non-cracked concrete

### Base materials:

- Reinforced and unreinforced normal weight concrete according to EN 206: 2013
- Strength classes C20/25 to C50/60 according to EN 206: 2013

### Temperature Range:

- Installation:  $\geq 10^\circ\text{C}$

- Use conditions:

Temperatur Range I: -40° C to +43° C	(max. long therm temperature +24° C and max. short therm temperature +43° C)
Temperatur Range II: -40° C to +65° C	(max. long therm temperature +43° C and max. short therm temperature +65° C)

### Use conditions (Environmental conditions)

- Structures subject to dry internal conditions (zinc coated steel, stainless steel or high corrosion resistant steel).
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist (stainless steel or high corrosion resistant steel).
- Structures subject to external atmospheric exposure and to permanently damp internal conditions, if other particular aggressive conditions exist (high corrosion resistant steel).

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

### Design:

- Anchorages are to be designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings prepared are taking account of the loads to be anchored. The position of the anchor is indicated on the designed drawings. (e.g. position of the anchor relative to reinforcement or to supports).
- Anchorages under static or quasi-static actions are designed in accordance with:
  - EOTA Technical Report TR 029 "Design of Bonded Anchors"; Edition September 2010
  - CEN/TS 1992-4:2009, "Design of Fastenings for use in concrete" part 4-1 and part 4-5,

DRIZORO S.A.U. MAXFIX-ER Injection Adhesive

Intended use  
Specifications

Annex B1

## Specication of intended use

### Installation

- Use categorie: Dry or wet concrete (must not be installed in flooded holes).
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Anchor installation in accordance with the manufacturer's specifications and drawings using the tools.
- Use of the anchor only as supplied by the manufacturer without exchanging the components.
- Reinforcing bars shall comply with specifications given in Annex A4.
- Checks before placing the anchor to ensure that the strength class of the concrete in which the anchor is to be placed is in the range given and is not lower than that of the concrete to which the characteristic loads apply.
- Check of concrete being well compacted, e.g. without significant voids.
- Marking and keeping the effective anchorage depth.
- Edge distance and spacing not less than the specified values without minus tolerances.
- Positioning of the drill holes without damaging the reinforcement.
- Drilling by hammer-drilling.
- In case of aborted drill hole: The drill hole shall be filled with high strength non-shrinkage mortar.
- Cleaning the drill hole and installation in accordance with Annexes B4 to B7.
- Overhead installation is allowed.

**DRIZORO S.A.U. MAXFIX-ER Injection Adhesive**

**Intended use**  
Installation data

**Annex B3**

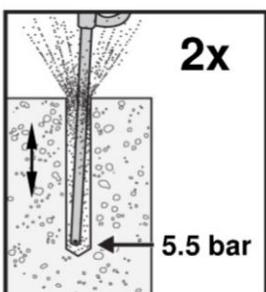

## HOLE PREPARATION

1.

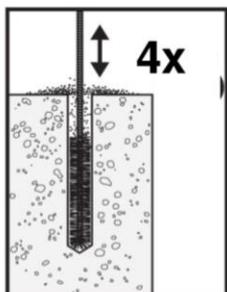

Drill hole to specified diameter and embedment depth.

2.

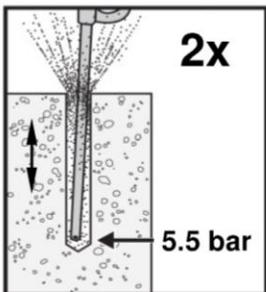

Blow dust from hole 2 times with oil-free compressed air (min. 5.5 bar) starting from the bottom of the hole.

3.

Brush 4 times with specified brush diameter (Annex B8).

4.

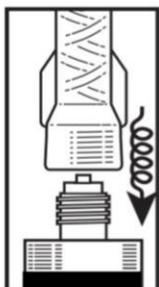

Blow 2 times with oil-free compressed air (min. 5.5 bar) and verify that the threaded rod and rebar can achieve the required embedment depth.

## CARTRIDGE PREPARATION AND HOLE FILLING

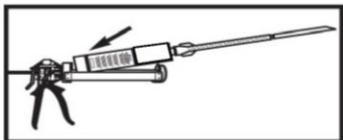

1. Check cartridge expiration date. **Do not use expired product.** Product is usable until end of printed expiration month. Open cartridge per package instructions.

2.

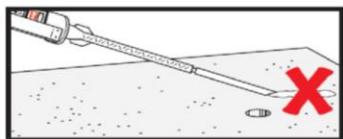

Attach proper mixing nozzle supplied by the manufacturer to the cartridge. Do not modify nozzle.

3.

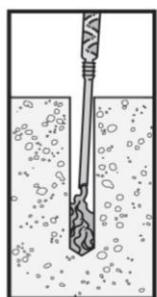

Insert cartridge into the appropriate dispensing tool.

4.

Dispense adhesive to the side until properly mixed, min. 3 strokes (uniform teal color). Discard initial adhesive!

5.

Fill hole approximately 2/3 full, starting from bottom or back of the cleaned drilled hole. Withdraw the nozzle slowly to avoid creating air pockets.

For drilled holes deeper than 150 mm (when  $d_0 \leq 16\text{mm}$ ) and drilled holes deeper than 250 mm (when  $16 < d_0 \leq 30\text{ mm}$ ) an extension tube shall be used. Adhesive retaining caps shall be used in overhead and horizontal installations (Annex B7).

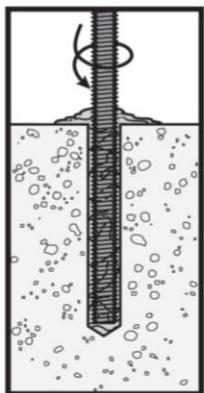

**DRIZORO S.A.U. MAXFIX-ER Injection Adhesive**

**Intended use**  
Installation instructions

**Annex B5**

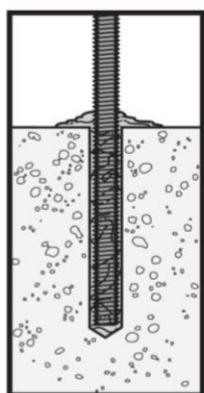

## ANCHOR INSTALLATION (vertical downward anchorage)

1.

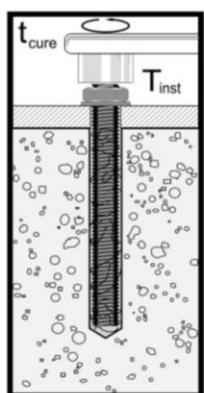

Insert clean, oil free anchor, turning slowly until the anchor contacts the bottom of the hole.  
Setting control: Excess mortar flows out of the borehole.

2.

Do not disturb the anchor until fully cured. The curing time  $t_{cure}$  is given in table B3.

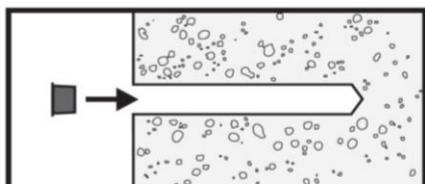

3.

After required curing time  $t_{cure}$  anchor can be loaded. Apply the installation torque  $T_{inst}$  using calibrated torque-wrench.

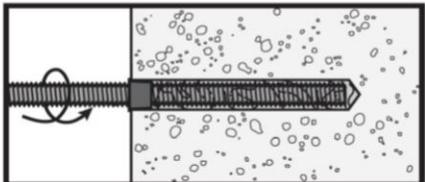

## ANCHOR INSTALLATION (horizontal and overhead anchorage)

1.

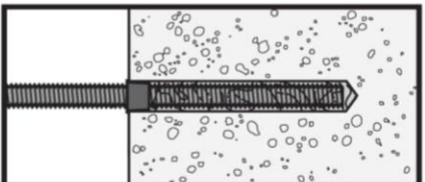

Install adhesive retaining cap.

2.

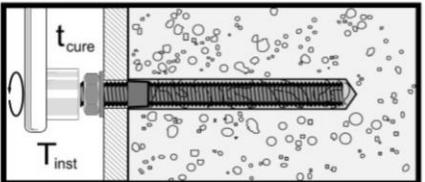

Insert clean, oil free anchor, turning slowly until the anchor contacts the bottom of the hole.

3.

Do not disturb the anchor until fully cured. The curing time  $t_{cure}$  is given in table B3.

4.

After required curing time  $t_{cure}$  anchor can be loaded. Apply the installation torque  $T_{inst}$  using calibrated torque-wrench.

**Table B3: Maximum working and minimum curing time**

Temperature in the anchorage base $T_{anchorage\ base}$	Working time $t_{gel}$	Curing time <sup>1)</sup> $t_{cure}$
$T_{anchorage\ base} \geq 10^\circ$	$\leq 60$ minutes	$\geq 72$ hours
$T_{anchorage\ base} \geq 21^\circ$	$\leq 45$ minutes	$\geq 24$ hours
$T_{anchorage\ base} \geq 32^\circ$	$\leq 20$ minutes	$\geq 24$ hours
$T_{anchorage\ base} \geq 43^\circ$	$\leq 12$ minutes	$\geq 24$ hours

<sup>1)</sup> For installation in wet concrete, the curing times shall be doubled (installation in water-filled drilled holes is not allowed).

#### Annex C2

**Table C3: Characteristic values of resistance to tension loads.**  
**Design method TR 029 or CEN/TS 1992-4-5**

MAXFIX-ER Epoxy Adhesive	Reinforcing bar						
	Ø12	Ø14	Ø16	Ø20	Ø25		
<b>Steel failure</b>							
Characteristic tension resistance B500B acc. DIN 488-2:2009-08 <sup>4)</sup>	N <sub>Rk,s</sub>	[kN]	62	85	111	173	270
Partial safety factor	γ <sub>Ms</sub> <sup>1)</sup>	[ - ]			1,4		
<b>Combined pull-out and concrete cone failure</b>							
Nom. rebar diameter	d	[mm]	12	14	16	20	25
Characteristic bond resistance in <b>non-cracked</b> concrete C20/25							
Temperature range I: 43°C / 24°C <sup>2)</sup>	τ <sub>Rk,ucr</sub>	[N/mm <sup>2</sup> ]	13,5	8	8	7	5,5
Temperature range II: 65°C / 43°C <sup>2)</sup>	τ <sub>Rk,ucr</sub>	[N/mm <sup>2</sup> ]	12,5	7,5	7,5	6,5	5
Factor according to CEN/TS 1992-4-5: 6.2.2.3	k <sub>8</sub>	[ - ]			10,1		
Characteristic bond resistance in <b>cracked</b> concrete C20/25							
Temperature range I: 43°C / 24°C <sup>2)</sup>	τ <sub>Rk,cr</sub>	[N/mm <sup>2</sup> ]	5	3,5	2,5	2,5	2,5
Temperature range II: 65°C / 43°C <sup>2)</sup>	τ <sub>Rk,cr</sub>	[N/mm <sup>2</sup> ]	4,5	3,5	2,5	2,5	2,5
Factor according to CEN/TS 1992-4-5: 6.2.2.3	k <sub>8</sub>	[ - ]			7,2		
Increasing factor for τ <sub>Rk,p</sub> in non-cracked and cracked concrete	Ψ <sub>c</sub>	C30/37			1,0		
		C40/50			1,02		
		C50/60			1,04		
Installation safety factor	γ <sub>2 = γ<sub>inst</sub></sub>	[ - ]			1,4		
<b>Concrete cone failure</b>							
Factor according to CEN/TS 1992-4-5: 6.2.3.1	k <sub>cr</sub>	[ - ]			7,2		
Factor according to CEN/TS 1992-4-5: 6.2.3.1	k <sub>ucr</sub>	[ - ]			10,1		
Edge distance	c <sub>cr,N</sub>	[mm]			1,5x h <sub>ef</sub>		
Center spacing	s <sub>cr,N</sub>	[mm]			3x h <sub>ef</sub>		
Installation safety factor	γ <sub>2 = γ<sub>inst</sub></sub>	[ - ]			1,4		
<b>Splitting failure</b>							
Edge distance (splitting)	c <sub>cr,sp</sub> <sup>3)5)</sup>	[mm]	τ <sub>k,ucr</sub> = h <sub>ef</sub> * $\left(\frac{\tau_{k,ucr}}{8}\right)^{0,4} * \left(3,1 - 0,7 \frac{h}{h_{ef}}\right)$				
Center spacing (splitting)	s <sub>cr,sp</sub>	[mm]			2x c <sub>cr,sp</sub>		
Installation safety factor	γ <sub>2 = γ<sub>inst</sub></sub>	[ - ]			1,4		

1) In absence of other national regulations

5) 
$$\tau_{k,ucr} \leq \frac{k_{ucr} * \sqrt{h_{ef} * f_{ck}}}{\pi * d}$$

2) Maximum short and long term temperatures

3) Ratio value [h/h<sub>ef</sub>] ≤ 2,4

4) For reinforcement bars that do not comply with DIN 488: The characteristic tension resistance N<sub>Rk,s</sub> shall be determined acc. Technical Report TR 029, equation (5.5) or CEN/TS 1992-4-1, equation (B5).

#### DRIZORO S.A.U. MAXFIX-ER Injection Adhesive

#### Performances

Characteristic values of resistance to tension loads - Reinforcing bar  
Design method: EOTA TR 029:09/2010 or CEN/TS 1992-4-5:2009

#### Annex C3

**Table C4: Characteristic values of resistance to shear loads.**  
**Design method TR 029 or CEN/TS 1992-4**

<b>MAXFIX-ER Epoxy Adhesive</b>	<b>Reinforcing bar</b>				
	Ø12	Ø14	Ø16	Ø20	Ø25
<b>Steel failure without lever arm<sup>5)</sup></b>					
Characteristic resistance B500B acc. DIN 488-2:2009-08 <sup>3)</sup>	V <sub>Rk,s</sub>	[kN]	31	42	55
Partial safety factor	γ <sub>Ms</sub> <sup>1)</sup>	[ - ]			1,5
<b>Steel failure with lever arm<sup>5)</sup></b>					
Characteristic bending moment B500B acc. DIN 488-2:2009-08 <sup>4)</sup>	M <sup>0</sup> <sub>Rk,s</sub>	[Nm]	112	178	265
Partial safety factor	γ <sub>Ms</sub> <sup>1)</sup>	[ - ]			1,5
<b>Concrete pry-out failure</b>					
Factor in equation ( 5.7 ) of TR 029 or in equation (27) to CEN/TS 1992-4-5	k / k <sub>3</sub>	[ - ]			2
<b>Concrete edge failure</b>					
Effectiv anchor length	l <sub>f</sub>	[ - ]	h <sub>ef</sub> <sup>2)</sup>		
Anchor diameter	d = d <sub>nom</sub>	[ - ]	12	14	16
			20	25	

1) In absence of other national regulations

2) CEN/TS 1992-4-5: h<sub>ef</sub> ≤ 8 d<sub>nom</sub>

3) For reinforcing bars that do not comply with DIN 488: The characteristic resistance V<sub>Rk,s</sub> shall be determined acc. Technical report TR 029, equation (5.5) or CEN/TS 1992-4-1, equation (B8).

4) For reinforcing bars that do not comply with DIN 488: The characteristic bending moment M<sup>0</sup><sub>Rk,s</sub> shall be determined with: M<sup>0</sup><sub>Rk,s</sub> = 1,2 × W<sub>el</sub> × f<sub>uk</sub>

5) Ductility factor according to CEN/TS 1992-4-5: 6.3.2.1: k<sub>2</sub> = 1,0

**DRIZORO S.A.U. MAXFIX-ER Injection Adhesive**

**Performances**

Characteristic values of resistance to shear loads - Reinforcing bar  
Design method: EOTA TR 029:09/2010 or CEN/TS 1992-4-5:2009

**Annex C4**

**Table C5: Displacements under tension loads**

<b>MAXFIX-ER Epoxy Adhesive</b>		<b>Threaded rod</b>					
		M12	M16	M20	M24	M27	
<b>Non-cracked concrete</b>							
<b>Temperature range I: 43°C / 24°C<sup>2)</sup></b>
