## Specific Part

## 1 Technical description of the product

The B+BTec Chemical Capsule Anchor VD-EA is a bonded anchor consisting of a glass capsule VDP-EA and a threaded anchor rod with hexagon nut and washer. The anchor rod (including nut and washer) is made of zinc-plated steel, hot-dip galvanised steel, stainless steel or made of high corrosion resistant steel.
The glass capsule is placed into the hole and the anchor rod is driven by machine with simultaneous hammering and turning. The anchor rod is anchored via the bond between anchor rod, chemical mortar and concrete.
The product description is given in Annex A.
2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex $B$.
The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment
3.1 Mechanical resistance and stability (BWR 1)

| Essential characteristic | Performance |
| :--- | :--- |
| Characteristic resistance for static and quasi static <br> loads, Displacements | See Annex C1 - C6 |

3.2 Safety in case of fire (BWR 2)

| Essential characteristic | Performance |
| :--- | :--- |
| Reaction to fire | Anchorages satisfy requirements for <br> Class A1 |
| Resistance to fire | No performance assessed |

### 3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

## $3.4 \quad$ Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with guideline for European technical approval ETAG 001, April 2013 used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011 the applicable European legal act is: [96/582/EC]
The system to be applied is: 1
5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

| :--- | :--- |
| Product description <br> Materials <br> Dimensions | Annex A 2 |

## Specifications of intended use

## Anchorages subject to:

- Static and quasi-static loads: all sizes.

## Base materials:

- Reinforced or unreinforced normal weight concrete according to EN 206-1:2000.
- Strength classes C20/25 to C50/60 according to EN 206-1:2000.
- Non-cracked concrete.

## Temperature Range:

- I: $-40^{\circ} \mathrm{C}$ to $+40^{\circ} \mathrm{C}$ (max long term temperature $+24^{\circ} \mathrm{C}$ and max short term temperature $+40^{\circ} \mathrm{C}$ )
- II: $-40^{\circ} \mathrm{C}$ to $+80^{\circ} \mathrm{C}$ (max long term temperature $+50^{\circ} \mathrm{C}$ and max short term temperature $+80^{\circ} \mathrm{C}$ )

## Use conditions (Environmental conditions):

- Structures subject to dry internal conditions
(zinc coated steel, stainless steel or high corrosion resistant steel).
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist (stainless steel or high corrosion resistant steel).
- Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions exist
(high corrosion resistant steel).
Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

## Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages under static or quasi-static actions are designed in accordance with:
- EOTA Technical Report TR 029 "Design of bonded anchors", Edition September 2010 or
- CEN/TS 1992-4:2009

## Installation:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Dry or wet concrete: all sizes.
- Hole drilling by hammer drilling.
- cleaning the drill hole:
removing possibly existing water in the drill hole completely and cleaning the drill hole by at least one blowing operation, by at least $1 \times$ brushing / $1 \times$ blowing / $1 \times$ brushing operation by using the steel brush supplied by the manufacturer; before brushing cleaning the brush and checking whether the brush diameter according to Annex B 2, Table B3 is still sufficient. The steel brush shall produce natural resistance as it enters the anchor hole. If this is not the case a new brush or a brush with a larger diameter must be used.
- the anchor component installation temperature shall be at least $+5^{\circ} \mathrm{C}$; during curing of the chemical mortar the temperature of the concrete must not fall below $-5^{\circ} \mathrm{C}$.
