This European Technical Assessment contains

9 pages including 5 annexes which form an integral part of this assessment

This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of

EAD 150009-00-0301

European Technical Assessment

ETA-12/0537

English translation prepared by DIBt

Page 2 of 9 | 11 October 2017

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific part**1 Technical description of the product**

The blast furnace cement CEM III/A 52,5 N-SR "ENCI Rotterdam" is a cement which fulfils all requirements given in EN 197-1¹ for a common cement of strength class 52,5 N.

Furthermore the blast furnace cement CEM III/A 52,5 N-SR "ENCI Rotterdam" has a high resistance against sulfate attack on concrete.

The assessment for the verification of the essential characteristic "sulfate resistance" (SR) was done on a blast furnace cement CEM III/A with a blast furnace content of 52 % by mass. The blast furnace slag has a glass content of at least 90 % and a (CaO + MgO)/SiO₂-ratio of at least 1,2.

The blast furnace cement CEM III/A 52,5 N-SR "ENCI Rotterdam" is manufactured from a Portland cement clinker, a blast furnace slag and an addition of gypsum or anhydrite or any mixture of them to control setting. The specific surface (Blaine) of the cement shall be at least 550 m²/kg by combined grinding of the raw materials. It is also possible to manufacture the blast furnace cement CEM III/A 52,5 N-SR "ENCI Rotterdam" by separately grinding and subsequent mixing of the raw materials with a specific surface (Blaine) of at least 550 m²/kg.

The cement does not contain minor additional constituents.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The blast furnace cement CEM III/A 52,5 N-SR "ENCI Rotterdam" is intended to be used for preparation of concrete, mortar, grouts and other mixes for construction and for the manufacturing of construction products.

Especially the blast furnace cement CEM III/A 52,5 N-SR "ENCI Rotterdam" is characterized by an evidently high resistance against sulfate attack on concrete.

The verifications and assessment methods on which the European Technical Assessment is based lead to the assumption of a working life of the concrete incorporating the blast furnace cement CEM III/A 52,5 N-SR "ENCI Rotterdam" of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment**3.1 Mechanical resistance and stability (BWR 1)**

Essential characteristic	Performance
(CaO + MgO)/SiO ₂ -ratio of the blast furnace slag	B = 1,4
Glass content of the blast furnace slag	GC = 99 %
Specific surface of the cement (Blaine)	$\rho = 550 \text{ m}^2/\text{kg}$
Sulfate resistance	see Annex A (A1 to A4)
Characteristics for a common cement (CEM III/A)	
Early strength (2 days)	Class N ($\geq 20,0 \text{ N/mm}^2$)

¹ EN 197-1

Cement - Part 1: Composition, specification and conformity criteria for common cement

European Technical Assessment**ETA-12/0537**

English translation prepared by DIBt

Page 4 of 9 | 11 October 2017

Essential characteristic	Performance
Standard strength (28 days)	Class 52,5 ($\geq 52,5 \text{ N/mm}^2$)
Initial setting time	Passed (140 min)
Soundness	Passed (1 mm)
Loss on ignition	Passed (0,97 % by mass)
Insoluble residue	Passed (0,25 % by mass)
Sulfate content (as SO ₃)	Passed (3,1 % by mass)
Chloride content	Passed (0,05 % by mass)
Composition of the cement: Clinker (K): Blast furnace slag (S):	K = 48 % by mass (35 – 48 % by mass) S = 52 % by mass (52 – 65 % by mass)

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

According to Decision 97/555/EC² of the European Commission amended by the Commission Decision 2010/683/EU³, the assessment and verification of constancy of performance system (AVCP system) (see Annex V to Regulation (EU) 305/2011 as amended by the Commission Delegated Regulation (EU) No 568/2014) given in table1 applies.

Table 1: AVCP system

Product	Intended use(s)	Level(s) or Classe(s) of performance	AVCP system
Blast furnace cement CEM III/A with assessment of sulfate resistance (SR) and optional with low effective alkali content (LA) and/or low heat of hydration (LH)	Preparation of concrete, mortar, grouts and other mixes for construction and for the manufacture of construction products	-----	1+

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Annex A3

Testing of Sulfate Resistance of Blast-furnace cement CEM III/A – Flat prism method S_{FPM}

The testing procedure was done according to EAD 150009-00-0301, Annex B.

After a testing period of 180 days the specimens show no expansion damages, cracks or flaking based on formation of thaumasite, see figures A1 to A4.

Figure A1: Specimens with CEM III/A 52,5 N-SR "ENCI Rotterdam" after 180 days;
Storage: 20 °C in Ca(OH)₂-Solution (3 left-hand side specimens) and in
Na₂O₄-Solution (3 right-hand side specimens)
