and types of construction

Bautechnisches Prüfamt

An institution established by the Federal and
Laender Governments

European Technical Assessment

ETA-12/0208
of 26 May 2017

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the
European Technical Assessment:

Deutsches Institut für Bautechnik

Trade name of the construction product

termoz SV II ecotwist

Product family
to which the construction product belongs

Screwed-in plastic anchor for fixing of external thermal
insulation composite systems with rendering in concrete
and masonry

Manufacturer

fischerwerke GmbH & Co. KG
Klaus-Fischer-Straße 1
72178 Waldachtal
DEUTSCHLAND

Manufacturing plant

fischerwerke

This European Technical Assessment
contains

12 pages including 3 annexes which form an integral part
of this assessment

This European Technical Assessment is
issued in accordance with Regulation (EU)
No 305/2011, on the basis of

European Assessment Document (EAD)
330196-01-0604

This version replaces

ETA-12/0208 issued on 20 June 2013

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific part

1 Technical description of the product

The Fischer termoz SV II ecotwist screwed-in anchor consists of an anchor sleeve and a screw plate in different colours, both made of polyamide and an accompanying specific screw of galvanised steel.

An illustration and the description of the product are given in Annex 1.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 25 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Requirements with respect to the mechanical resistance and stability of non-load bearing parts of the works are not included in this Essential requirement but are under the Essential Requirement safety in use.

3.2 Safety and accessibility in use (BWR 4)

Essential characteristic	Performance
Characteristic resistance	See Annex C 1
Edge distances and spacing	See Annex B 2
Displacements	See Annex C 2

3.3 Energy economy and heat retention (BWR 6)

Essential characteristic	Performance
Point thermal transmittance	See Annex C 2

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with EAD No. 330196-01-0604, the applicable European legal act is: [97/463/EC].

The system to be applied is: 2+

English translation prepared by DIBt

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

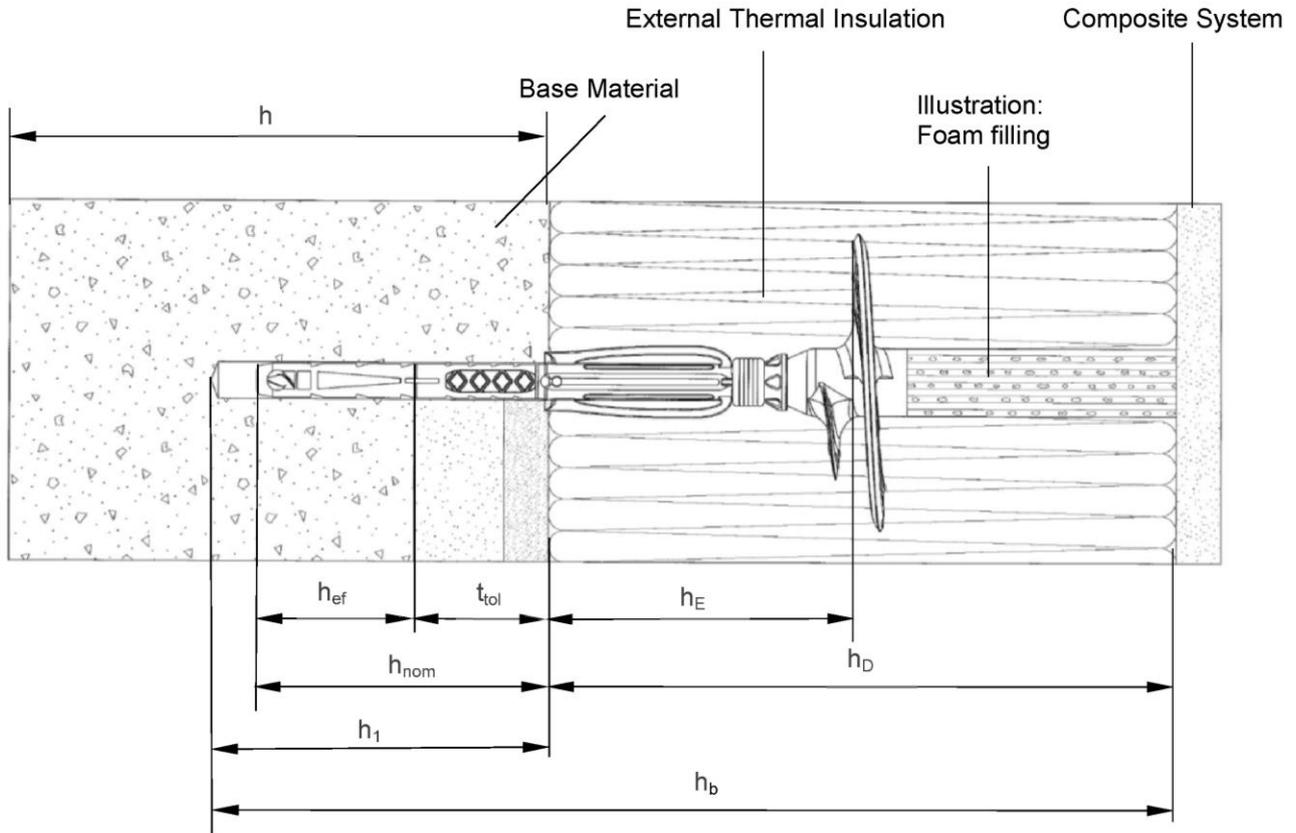

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Issued in Berlin on 26 May 2017 by Deutsches Institut für Bautechnik

Installed anchor : termoz SV II ecotwist

Intended use

Fixing of external thermal insulation composite systems (ETICS) in concrete and masonry

Legend

- h_{nom} = Overall plastic anchor embedment depth in the base material with non-load bearing coating (t_{tol})
- h_1 = Depth of drilled hole to deepest point in the base material
- h = Thickness of base material (wall)
- h_D = Thickness of insulation material
- t_{tol} = Thickness of equalizing layer and / or non-load bearing coating
- h_E = Embedment depth
- h_b = Total bore hole depth
- h_{ef} = Effective anchor embedment depth in the base material

Figures not to scale.

Product description

Anchor types, marking on the anchor plate/sleeve, dimensions and material

Annex A3

Specifications of intended use

Anchorage subject to:

- The anchor may only be used for transmission of wind suction loads and shall not be used for the transmission of dead loads of the external thermal insulation composite system (ETICS).

Base materials:

- Normal weight concrete (use category A), according to Annex C1
- Solid masonry (use category B), according to Annex C1
- Hollow or perforated masonry (use category C), according to Annex C1
- Lightweight aggregate concrete (use category D), according to Annex C1
- Autoclaved aerated concrete (use category E), according to Annex C1
- For other base materials of the use categories A, B, C, D and E the characteristic resistance of the anchor may be determined by job site tests acc. to EOTA Technical Report TR 051 Edition December 2016.

Temperature Range:

- 0°C to +40°C (max. short term temperature +40°C and max. long term temperature +24°C)

Design:

- The anchorages are designed under the responsibility of an engineer experienced in anchorages and masonry work with the partial safety factors $\gamma_M = 2,0$ and $\gamma_F = 1,5$ in absence of other national regulations.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchors is indicated on the design drawings.
- Fasteners are only to be used for multiple fixings of ETICS.

Installation:

- Drillmethod according to Annex C1
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters on the site
- Installation temperature from 0°C to +40°C
- Exposure to UV due to solar radiation of the anchor not protected by rendering ≤ 6 weeks

Minimum thickness of member, distances and spacing

Annex B2

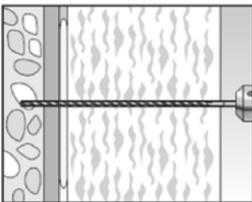

Installation instructions

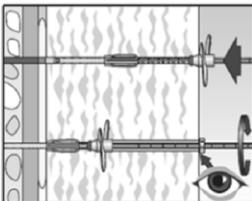

1. Measure insulation thickness h_D
(example: 18 cm = 180 mm).

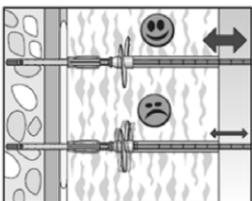

2. Adjust the setting tool ring corresponding to the insulation material thickness h_D in mm. Number is legible. Additionally to the setting tool ring a thin plastic plate (maximum 1 mm thickness) can be used as a stop unit for easier mounting.

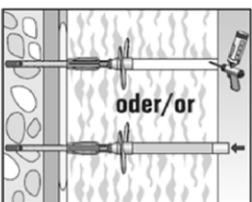

3. Drill bore hole.
Total drill hole depth must be at
 $t_{\text{tol}} 0-10 \text{ mm} \rightarrow h_D + 55 \text{ mm}$
 $t_{\text{tol}} 0-30 \text{ mm} \rightarrow h_D + 75 \text{ mm}$
 $t_{\text{tol}} 30-60 \text{ mm} \rightarrow h_D + 105 \text{ mm}$.
Note: Hlz, AAC only with rotary drilling

4. Press the anchor with the screw plate tight against the surface of the insulation material, then start screwing-in the anchor. Setting is finished when the surface of the ring is flush with the surface of the insulation material.

5. When step 4 is completed, press the adjustment tool tight against the installed anchor. If there is no axial movement of the anchor, remove the setting tool. In case of axial movement, a new anchor has to be set in a new drill hole.

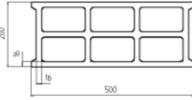

5. The hole in the insulation material must be filled with a suitable foam (illustrated in Annex A1) or must be closed with an appropriate insulation cylinder.
