The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

## Specific Part

### 1 Technical description of the product

The Injection system Power Anchor 287 for masonry is a bonded anchor (injection type) consisting of a mortar cartridge with injection mortar Power Anchor 287, Power Anchor 287 Low Speed and Power Anchor 287 High Speed, a perforated sieve sleeve and an anchor rod with hexagon nut and washer or an internal threaded rod. The steel elements are made of zinc coated steel, stainless steel or high corrosion resistant steel.

The anchor rod is placed into a drilled hole filled with injection mortar and is anchored via the bond between steel element, injection mortar and masonry and mechanical interlock.

The product description is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

| Essential characteristic | Performance |
|---|---|
| Characteristic resistance for tension and shear loads | See Annex C 1 – C 4 |
| Characteristic resistance for bending moments | See Annex C 5 |
| Displacements under shear and tension loads | See Annex C 5 |
| Reduction Factor for job site tests (β-Factor) | See Annex C 6 |
| Edge distances and spacing | See Annex C 7 – C8 |

#### 3.2 Safety in case of fire (BWR 2)

| Essential characteristic | Performance |
|---|---|
| Reaction to fire | Anchorages satisfy requirements for Class A1 |
| Resistance to fire | No performance assessed |

#### 3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

### 3.4 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

## 4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with guideline for European technical approval ETAG 029, April 2013 used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011 the applicable European legal act is: [97/177/EC].

The system to be applied is: 1

## 5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

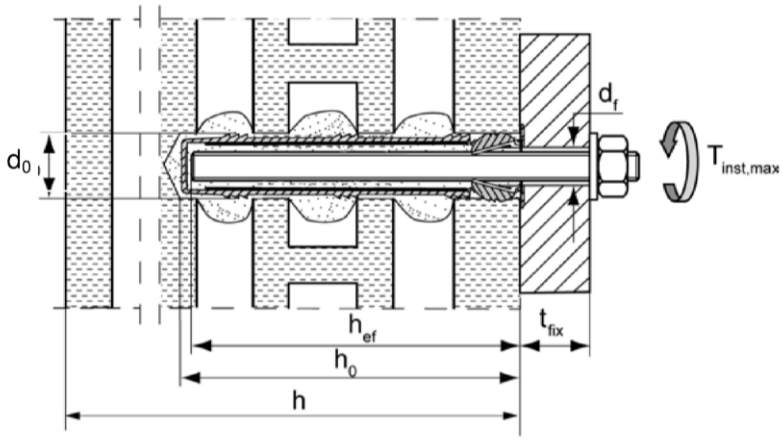
## Installation conditions part 1

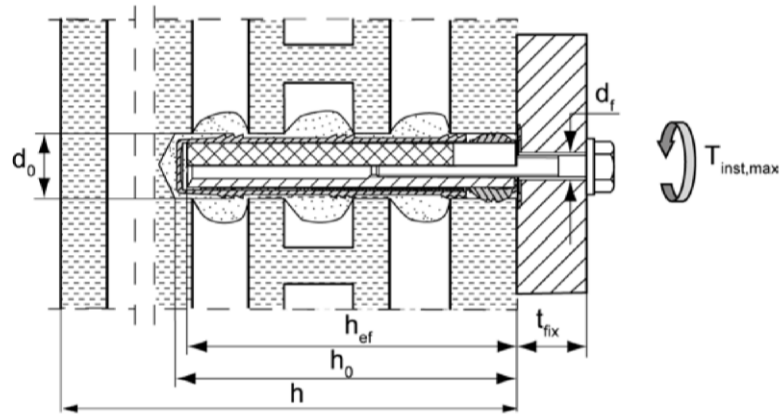
### Threaded rods with perforated sleeve; Installation in perforated and solid brick masonry



**Pre-positioned installation**

Perforated sleeve 12x85
Perforated sleeve 16x85
Perforated sleeve 16x130
Perforated sleeve 20x85
Perforated sleeve 20x130
Perforated sleeve 20x200

### Internal threaded anchors with perforated sleeve; Installation in perforated and solid brick masonry



**Pre-positioned installation**

Perforated sleeve 16x85 –
Internal threaded anchor 11x85 M6 and M8
Perforated sleeve 20x85 –
Internal threaded anchor 15x85 M10 and M12

$h_{ef}$ = effective anchorage depth
$h_0$ = depth of drill hole
$t_{fix}$ = thickness of fixture
h = thickness of masonry

$d_0$= nominal drill bit diameter
$d_f$= diameter of clearance hole in the fixture
$T_{inst,max}$ = maximum torque moment

**Injection system Power Anchor 287 for masonry**

**Product description**
Materials

**Annex A 4**

Deutsches Institut für Bautechnik DIBt

## Specifications of intended use

**Anchorages subject to:**

- Static and quasi-static loads

**Base materials:**

- Solid brick masonry (Use category b) and autoclaved aerated concrete (Use category d), acc. to Annex B8.
  Note: The characteristic resistance is also valid for larger brick sizes and higher compressive strength of the masonry unit.
- Hollow brick masonry (use category c), according to Annex B8
- Mortar strength class of the masonry M2,5 at minimum according to EN 998-2:2010
- For other bricks in solid masonry, hollow or perforated masonry and autoclaved aerated concrete, the characteristic resistance of the anchor may be determined by job site tests according to ETAG 029, Annex B under consideration of the β-factor according to Annex C6, Table C4

**Temperature Range:**

- **I**: From - 40°C to +80°C (max. short term temperature +80°C and max. long term temperature +50°C)

**Use conditions (Environmental conditions):**

- Dry and wet structure (regarding injection mortar)
- Structures subject to dry internal conditions exist
  (zinc coated steel, stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure including industrial and marine environment or exposure to permanently damp internal condition, if no particular aggressive conditions exist
  (stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions exist (high corrosion resistant steel)
  Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

| **Injection system Power Anchor 287 for masonry** | **Annex B 1** |
| **Intended Use**<br>Specifications | |

Deutsches Institut für Bautechnik DIBt

## Specifications of intended use

**Design:**

- The anchorages have to be designed in accordance with the ETAG 029, Annex C, Design method A under the responsibility of an engineer experienced in anchorages and masonry work
  Applies to all bricks, if no other values are specified:

  $N_{Rk} = N_{Rk,s} = N_{Rk,p} = N_{Rk,b} = N_{Rk,pb}$

  $V_{Rk} = V_{Rk,s} = V_{Rk,b} = V_{Rk,c} = V_{Rk,pb}$

- Verifiable calculation notes and drawings have to be prepared taking account the relevant masonry in the region of the anchorage, the loads to be transmitted and their transmission to the supports of the structure. The position of the anchor is indicated on the design drawings

**Installation:**

- Category d/d: -Installation and use in dry structures
- Category w/w: -Installation and use in dry and wet structures
- Hole drilling by hammer drill mode
- In case of aborted hole: The hole shall be filled with mortar
- Bridging of unbearing layer (e.g. plaster) see Annex B 4 (Table B1.3)
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Fastening screws or threaded rods (including nut and washer) must comply with the appropriate material and property class of the internal threaded anchor
- minimum curing time see Annex B5. Table B3
- Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled:

  Material dimensions and mechanical properties of the metal parts according to the specifications are given in Annex A4, Table A1

  Conformation of material and mechanical properties of the metal parts by inspection certificate 3.1 according to EN 10204:2004, the documents shall be stored

  Marking of the threaded rod with the envisage embedment depth. This may be done by the manufacturer of the rod or by a person on job site

## Cleaning brush

Only for solid bricks and autoclaved aerated concrete

## Table B2: Parameters of steel brush

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| Drill hole diameter | $d_0$ | [mm] | 10 | 12 | 14 | 16 | 18 | 20 |
| Brush diameter | $d_{b,nom}$ | [mm] | 11 | 14 | 16 | 20 | 20 | 25 |

## Table B3: Maximum processing time of the mortar and minimum curing time

(During the curing time of the mortar the masonry temperature may not fall below the listed minimum temperature).

| Temperature at anchoring base [ °C ] | Minimum curing time [1] $t_{cure}$ [minutes] | | |
|---|---|---|---|
| | Power Anchor 287 High Speed [3] | Power Anchor 287 [2] | Power Anchor 287 Low Speed [2] |
| -10 to -5 | 12 hours | | |
| >-5 to ±0 | 3 hours | 24 hours | |
| >±0 to +5 | 90 | 3 hours | 6 hours |
| >+5 to +10 | 45 | 90 | 3 hours |
| >+10 to +20 | 30 | 60 | 2 hours |
| >+20 to +30 | | 45 | 60 |
| >+30 to +40 | | 35 | 30 |

| System-temperature (mortar) [ °C ] | Maximum processing time $t_{work}$ [minutes] | | |
|---|---|---|---|
| | Power Anchor 287 High Speed | Power Anchor 287 [2] | Power Anchor 287 Low Speed [2] |
| | | | |
| ±0 | 5 | | |
| +5 | 5 | 13 | 20 |
| +10 | 3 | 9 | 20 |
| +20 | 1 | 5 | 10 |
| +30 | | 4 | 6 |
| +40 | | 2 | 4 |

[1] For wet bricks the curing time must be doubled
[2] Minimum cartridge temperature +5°C
[3] Minimum cartridge temperature ±0°C

## Installation instructions Part 1

**Installation and Preparing the cartridge in solid brick and autoclaved aerated concrete (without perforated sleeve)**

| | | |
|---|---|---|
| 1 |   | Drill the hole. Depth of drill hole $h_0$ and drill hole diameter $d_0$ see Table **B1.1** or **B1.2** |
| 2 |   | Blow out the drill hole two times. Brush the drill hole two times (see Table B2) and blow out two times again |
| 3 |  | Remove the sealing cap — Screw on the static mixer (the spiral in the static mixer must be clearly visible) |
| 4 |  | Place the cartridge into a suitable dispenser. — Press out approximately 10 cm of material until the mortar is permanent-ly grey in colour. Mortar which is not grey in colour will not cure and must be disposed off. |
| 5 |  | Fill approximately 2/3 of the drill hole with mortar Always begin from the bottom of the hole to eliminate voids[1]. — For push through installation (not Internal threaded anchor) fill the annular gap also with mortar. |
| 6 |  | Only use clean and oil-free anchor elements. Mark the threaded rod for setting depth. Press the threaded rod or internal threaded anchor down to the bottom of the hole, turning it slightly by hand while doing. After inserting the anchor element, excess mortar must emerge around the anchor element. |
| 7 |  | Do not touch. Minimum curing time $t_{cure}$ see Table **B3** —  Mounting the fixture $T_{inst,max}$ see Table **B1.1** or **B1.2** |

[1] For the exact quantity of mortar see manufacturer`s specification.

| | |
|---|---|

| **Intended Use**<br>Installation instructions part 1 in solid brick and autoclaved aerated concrete | |

Deutsches Institut für Bautechnik DIBt

## Installation instructions Part 2

**Installation in perforated or solid brick with perforated sleeve** (pre-positioned anchorage)

| | | | | |
|---|---|---|---|---|
| 1 |  | Drill the hole (hammer drill). Depth of drill hole $h_0$ and drill hole diameter $d_0$ see Table **B1.3** | When install perforated sleeves in solid bricks or solid areas of hollow bricks, also clean the hole by blowing out and brushing | |
| 2 |  | Remove the sealing cap |  | Screw on the static mixer (the spiral in the static mixer must be clearly visible) |
| 3 |  | Place the cartridge into a suitable dispenser |  | Press out approximately 10 cm of material until the mortar is permanently grey in colour. Mortar which is not grey in colour will not cure and must be disposed off |
| 4 |  | Insert the perforated sleeve flush with the surface of the masonry or plaster . |  | Fill the perforated sleeve completely with mortar beginning from the bottom of the hole[1)]. |
| 5 |   | | Only use clean and oil-free anchor elements. Mark the threaded rod for setting depth. Insert the threaded rod or the internal threaded anchor by hand using light turning motions until reaching the setting depth marking (threaded rod) or flush with the surface (internal threaded anchor). | |
| 6 |  | Do not touch. Minimum curing time $t_{cure}$ see Table **B3** |  | Mounting the fixture. $T_{inst,max}$ see Table B1.3 |

[1)] For the exact quantity of mortar see manufacturer`s specification.

| 10 | all sizes | 100 | 250 | | 300 | | 2 | | | | |

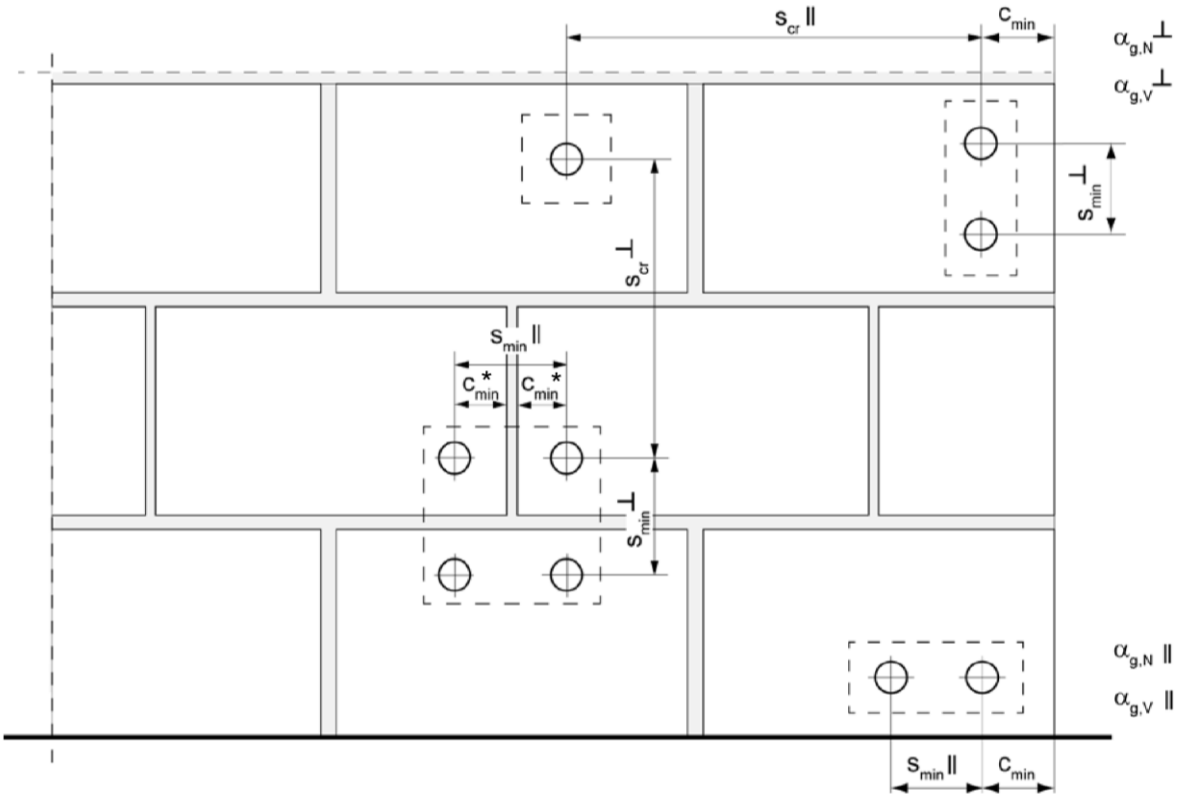
[1] only valid for tension loads, for shear loads $s_{min}\| = s_{cr}\|$
[2] spacing depending on brick dimension, brick dimension see table B4, brick 7

**Injection system Power Anchor 287 for masonry**

**Performances**
Edge distance and spacing

**Annex C 7**

Deutsches Institut für Bautechnik DIBt



* Only, if joints are visible and vertical joints are not filled with mortar

$s_{min}$ || = Minimum spacing parallel to bed joint
$s_{min}$ ⊥ = Minimum spacing vertical to bed joint
$s_{cr}$ || = Characteristic spacing parallel to bed joint
$s_{cr}$ ⊥ = Characteristic spacing vertical to bed joint
$c_{cr} = c_{min}$ = Edge distance
$\alpha_{g,N}$ || = Group factor for tension load parallel to bed joint
$\alpha_{g,V}$ || = Group factor for shear load parallel to bed joint
$\alpha_{g,N}$ ⊥ = Group factor for tension load vertical to bed joint
$\alpha_{g,V}$ ⊥ = Group factor for shear load vertical to bed joint

For $s > s_{cr}$ $\alpha_g = 2$

For $s_{min} \leq s \leq s_{cr}$ $\alpha_g$ according to table C5

$N^g_{Rk} = \alpha_{g,N} \bullet N_{Rk}$; $V^g_{Rk} = \alpha_{g,V} \bullet V_{Rk}$ (Group of 2 anchors)

$N^g_{Rk} = \alpha_{g,N}$ || $\bullet$ $\alpha_{g,N}$ ⊥ $\bullet N_{Rk}$; $V^g_{Rk} = \alpha_{g,V}$ || $\bullet$ $\alpha_{g,V}$ ⊥ $\bullet V_{Rk}$ (Group of 4 anchors)
