DEUTSCHLAND

Manufacturing plant

Halfen Herstellwerk HB1, HB3

This European Technical Assessment contains

61 pages including 3 annexes which form an integral part of this assessment

This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of

Guideline for European technical approval of "Metal Injection Anchors for Use in Masonry", ETAG 029, April 2013,
used as European Assessment Document (EAD)
according to Article 66 Paragraph 3 of Regulation (EU)
No 305/2011.

**European Technical Assessment
ETA-17/0196**

English translation prepared by DIBt

Page 2 of 61 | 10 March 2017

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part**1 Technical description of the product**

The Injection System HBU-VMU plus for masonry is a bonded anchor (injection type) consisting of a mortar cartridge with injection mortar HBU-VMU plus or HBU-VMU plus Polar, a perforated sleeve and an anchor rod with hexagon nut and washer. The steel elements are made of zinc coated steel or stainless steel.

The anchor rod is placed into a drilled hole filled with injection mortar and is anchored via the bond between steel element, injection mortar and masonry and mechanical interlock.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment**3.1 Mechanical resistance and stability (BWR 1)**

Essential characteristic	Performance
Characteristic resistance for steel elements	See Annex C2
Characteristic resistance for anchors in masonry units	See Annex C3 – C45
Displacements under shear and tension loads	See Annex C4 – C45
Reduction Factor for job site tests (β -Factor)	See Annex C1
Edge distances and spacing	See Annex C3 – C45
Group factor for group fastenings	See Annex C3 – C45

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	No performance assessed

3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

3.4 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with guideline for European technical approval ETAG 029, April 2013 used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011 the applicable European legal act is: [97/177/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

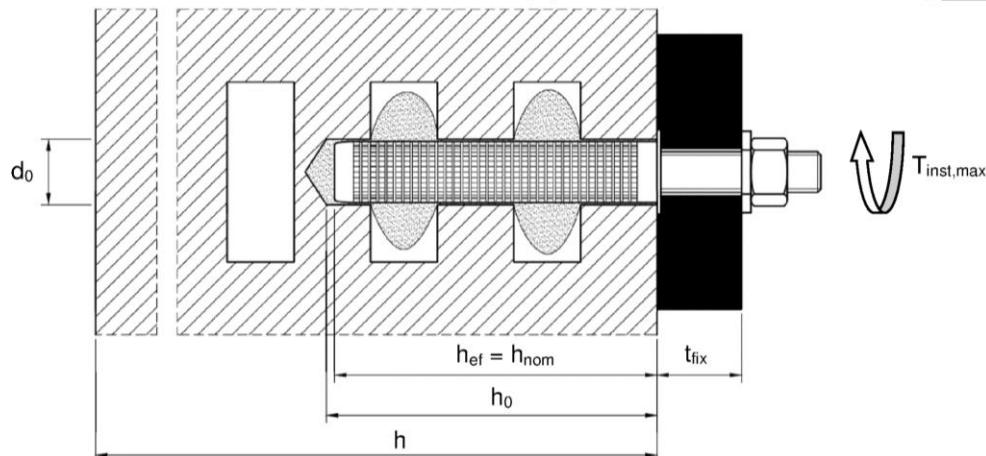

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Injection System HB-VMU plus for masonry

Product description

Sizes of threaded rods and sleeves

Annex A5

Specifications of intended use

Anchorage subject to:

- Static and quasi-static loads

Base material:

- Autoclaved Aerated Concrete (use category d) according to Annex B2
- Solid brick masonry (use category b), according to Annex B2.
- Hollow brick masonry (use category c), according to Annex B2 and B3.
- Mortar strength class of the masonry M 2,5 at minimum according to EN 998-2:2010.
- For other bricks in solid masonry and in hollow or perforated masonry, the characteristic resistance of the anchor may be determined by job site tests according to ETAG 029, Annex B under consideration of the β factor according to Annex C1, Table C1

Note: The characteristic resistance for solid bricks and autoclaved aerated concrete are also valid for larger brick sizes and larger compressive strength of the masonry unit.

Temperature range:

- T_a : - 40°C to +40°C (max. short term temperature +40°C and max. long term temperature +24°C)
- T_b : - 40°C to +80°C (max. short term temperature +80°C and max. long term temperature +50°C)
- T_c : - 40°C to +120°C (max. short term temperature +120°C and max. long term temperature +72°C)

Use conditions (Environmental conditions):

- Dry and wet structure (regarding injection mortar).
- Structures subject to dry internal conditions (zinc coated steel, stainless steel or high corrosion resistant steel).
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist (stainless steel or high corrosion resistant steel).
- Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions exist (high corrosion resistant steel).

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

Use categories in respect of installation and use:

- Category d/d: Installation and use in dry masonry
- Category w/d: Installation in wet masonry and use in dry masonry
- Category w/w: Installation and use in dry or wet masonry

Design:

- Verifiable calculation notes and drawings are prepared taking account the relevant masonry in the region of the anchorage, the loads to be transmitted and their transmission to the supports of the structure. The position of the anchor is indicated on the design drawings.
- The anchorages are designed in accordance with the ETAG 029, Annex C, Design method A under the responsibility of an engineer experienced in anchorages and masonry work.

Characteristic values	$N_{Rk,s}$ $V_{Rk,s}$	$N_{Rk,p} = N_{Rk,b}$ $V_{Rk,b}$ and $V_{Rk,c}$	$N_{Rk,pb}$ $V_{Rk,pb}$
Determination acc. to	Annex C3	Annex C4 to C45	ETAG 029, Annex C

- For application with sleeve with drill bit size \leq 15mm installed in joints not filled with mortar:

$$N_{Rk,p,j} = 0,18 * N_{Rk,p} \text{ and } N_{Rk,b,j} = 0,18 * N_{Rk,b} \quad (N_{Rk,p} = N_{Rk,b} \text{ see Annex C4 to C45})$$
$$V_{Rk,c,j} = 0,15 * V_{Rk,c} \text{ and } V_{Rk,b,j} = 0,15 * V_{Rk,b} \quad (V_{Rk,b} \text{ and } V_{Rk,c} \text{ see Annex C4 to C45})$$

- Application without sleeve installed in joints not filled with mortar is not allowed.

Installation:

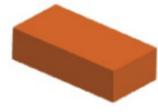

- Dry or wet structures
- Drill method acc. to Annex C4 to C45.
- Anchor Installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- When using anchor rods with internal thread (HB-VMU-IG) fastening screws or threaded rods (incl. nut and washer) must comply with the appropriate material and property class of the Internal threaded rod.

0 °C to + 4 °C		10 min	2,5 h
+ 5 °C to + 9 °C		6 min	80 min
+ 10 °C		6 min	60 min

¹⁾ In wet base material the curing time must be doubled.

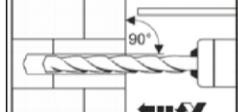

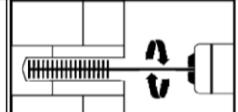

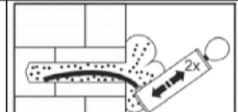

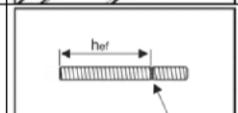

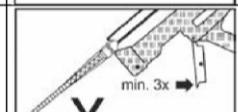

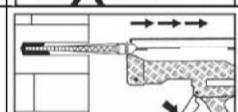

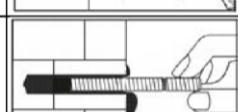

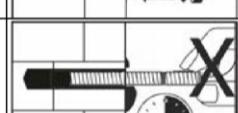

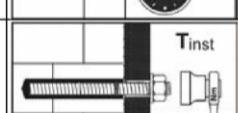

Injection System HB-VMU plus for masonry

Intended Use

Working and curing time

Annex B5

Installation Instruction - Solid masonry without sleeve

1.		Drill hole perpendicular to the surface of base material with drill method according to Annex C4-C45, with nominal drill hole diameter and bore hole depth according to the size and embedment depth required by the selected anchor. In case of aborted drill hole the hole shall be filled with mortar.
2a.		Drill hole must be cleaned prior to installation of the anchor. Blow out from the bottom of the bore hole two times.
2b.		Attach the appropriate sized brush (acc.to Annex B4) to a drilling machine or a battery screwdriver, brush the hole clean two times.
2c.		Finally blow out the hole again two times.
3.		Remove the cap and attach the supplied static-mixing nozzle to the cartridge and load the cartridge into the correct dispensing tool. In case of a foil tube cartridge, cut off the clip before use. For every working interruption longer than the recommended working time (Table B4 or B5) as well as for new cartridges, a new static-mixer shall be used.
4.		The position of the embedment depth shall be marked on the threaded rod. The anchor rod shall be free of dirt, grease, oil or other foreign material.
5.		Initial adhesive is not suitable for fixing the anchor. Prior to dispensing into the anchor hole, squeeze out separately a minimum of three full strokes, for foil tube cartridges six full strokes and discard non-uniformly mixed adhesive components until the mortar shows a consistent grey color.
6.		Starting from the bottom or back of the cleaned anchor hole, fill up the hole to min two-thirds with adhesive. Slowly withdraw the static mixing nozzle will avoid creating air pockets. Observe the working times given in Table B4 and B5.
7.		Push the threaded rod into the anchor hole while turning slightly to ensure positive distribution of the adhesive until the embedment depth is reached. Be sure that the annular gap is fully filled with mortar. If no excess mortar is visible at the top of the hole, the application has to be renewed.
8.		Allow the adhesive to cure to the specified curing time given in Table B4 or B5. Do not move or load the anchor until it is fully cured. After curing time remove access mortar.
9.		After full curing, the fixture can be installed with up to the max. installation torque acc. to Table B2 or B3 with calibrated torque wrench.

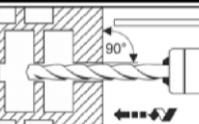

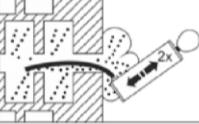

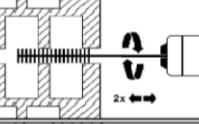

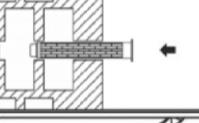

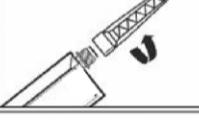

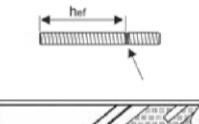

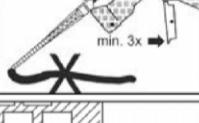

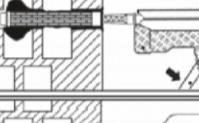

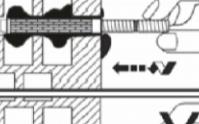

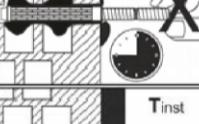

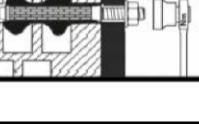

Injection System HB-VMU plus for masonry

Intended Use

Installation instructions (Solid masonry without sleeve)

Annex B6

Installation Instructions - Solid or hollow masonry - with sleeve

1.		Drill hole perpendicular to the surface of base material with drill method according to Annex C4-C45, with nominal drill hole diameter and bore hole depth according to the size and embedment depth required by the selected anchor. In case of aborted drill hole the drill hole shall be filled with mortar.
2a.		Drill hole must be cleaned prior to installation of the anchor. Blow out from the bottom of the bore hole two times.
2b.		Attach the appropriate sized brush (acc.to Annex B4) to a drilling machine or a battery screwdriver, brush the hole clean two times.
2c.		Finally blow out the hole again two times.
3.		Insert the perforated sleeve flush with the surface of the masonry or plaster. Only use sleeves that have the right length. Never cut the sleeve.
4.		Remove the cap and attach the supplied static-mixing nozzle to the cartridge and load the cartridge into the correct dispensing tool. In case of a foil tube cartridge, cut off the clip before use. For every working interruption longer than the recommended working time (Table B4 or B5) as well as for new cartridges, a new static-mixer shall be used.
5.		The position of the embedment depth shall be marked on the threaded rod. The anchor rod shall be free of dirt, grease, oil or other foreign material.
6.		Initial adhesive is not suitable for fixing the anchor. Prior to dispensing into the anchor hole, squeeze out separately a minimum of three full strokes, for foil tube cartridges six full strokes and discard non-uniformly mixed adhesive components until the mortar shows a consistent grey colour.
7.		Starting from the bottom or back fill the sleeve with adhesive. For embedment depth equal to or larger than 130 mm an extension nozzle shall be used. For quantity of mortar attend cartridges label installation instructions. Observe the working times given in Table B4 or B5.
8.		Push the threaded rod into the anchor hole while turning slightly to ensure positive distribution of the adhesive until the embedment depth is reached.
9.		Allow the adhesive to cure to the specified curing time given in Table B4 or B5. Do not move or load the anchor until it is fully cured. After curing time remove access mortar.
10.		After full curing, the fixture can be installed with up to the max. installation torque acc. to Table B2 and B3 with calibrated torque wrench.

Performances

Characteristic steel resistance under tension and shear load

Annex C2

Spacing and edge distance

C_{cr} = Characteristic edge distance

C_{min} = Minimum edge distance

S_{cr} = Characteristic spacing

S_{min} = Minimum spacing

$S_{cr,II}; (S_{min,II})$ = Characteristic (minimum) spacing for anchors placed parallel to bed joint

$S_{cr,\perp}; (S_{min,\perp})$ = Characteristic (minimum) spacing for anchors placed perpendicular to bed joint

Load direction Anchor position	Tension load	Shear load parallel to free edge	Shear load perpendicular to free edge
Anchors places parallel to bed joint $s_{cr,II}; (s_{min,II})$			
Anchors places perpendicular to bed joint $s_{cr,\perp}; (s_{min,\perp})$			

$\alpha_{g,N,II}$ = Group factor in case of tension load for anchors placed parallel to the bed joint

$\alpha_{g,V,II}$ = Group factor in case of shear load for anchors placed parallel to the bed joint

$\alpha_{g,N,\perp}$ = Group factor in case of tension load for anchors placed perpendicular to the bed joint

$\alpha_{g,V,\perp}$ = Group factor in case of shear load for anchors placed perpendicular to the bed joint

Group of 2 anchors:

$$N_{Rk}^g = \alpha_{g,N} * N_{Rk}$$

and

$$V_{Rk}^g = \alpha_{g,V} * V_{Rk}$$

Group of 4 anchors:

$$N_{Rk}^g = \alpha_{g,N,II} * \alpha_{g,N,\perp} * N_{Rk}$$

and

$$V_{Rk}^g = \alpha_{g,V,II} * \alpha_{g,V,\perp} * V_{Rk}$$

(N_{Rk} : $N_{Rk,b}$ or $N_{Rk,b,j}$ for c_{cr})

(V_{Rk} : $V_{Rk,c}$; $V_{Rk,c,j}$; $V_{Rk,b}$ or $V_{Rk,b,j}$ for c_{cr})
