Specific Part

1 Technical description of the product

The BTI High-Performance Anchor BHA, BHA-I is an anchor made of galvanised steel (sizes with external diameter 10, 12, 15, 18, 24, 28 and 32, sizes with internal thread 12/M6 I, 12/M8 I, 15/M10 I and 15/M12 I) or stainless steel (sizes with external diameter 10, 12, 15, 18 and 24, sizes with internal thread 12/M6 I, 12/M8 I, 15/M10 I and 15/M12 I) which is placed into a drilled hole and anchored by torque-controlled expansion.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

| Essential characteristic | Performance |
|------------------------------------------------------------------------------------------|-----------------------------|
| Characteristic resistance to tension load | See Annex C 1 and C 2 |
| (static and quasi-static loading) | |
| Characteristic resistance to shear load | See Annex C 3 and C 4 |
| (static and quasi-static loading) | |
| Displacements (static and quasi-static loading) | See Annex C 9 and C 10 |
| Characteristic resistance and displacements for seismic performance categories C1 and C2 | See Annex C 7, C 8 and C 10 |

3.2 Safety in case of fire (BWR 2)

| Essential characteristics | Performance |
|---------------------------|-----------------------|
| Reaction to fire | Class A1 |
| Resistance to fire | See Annex C 5 and C 6 |

European Technical Assessment ETA-09/0159

Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330232-00-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

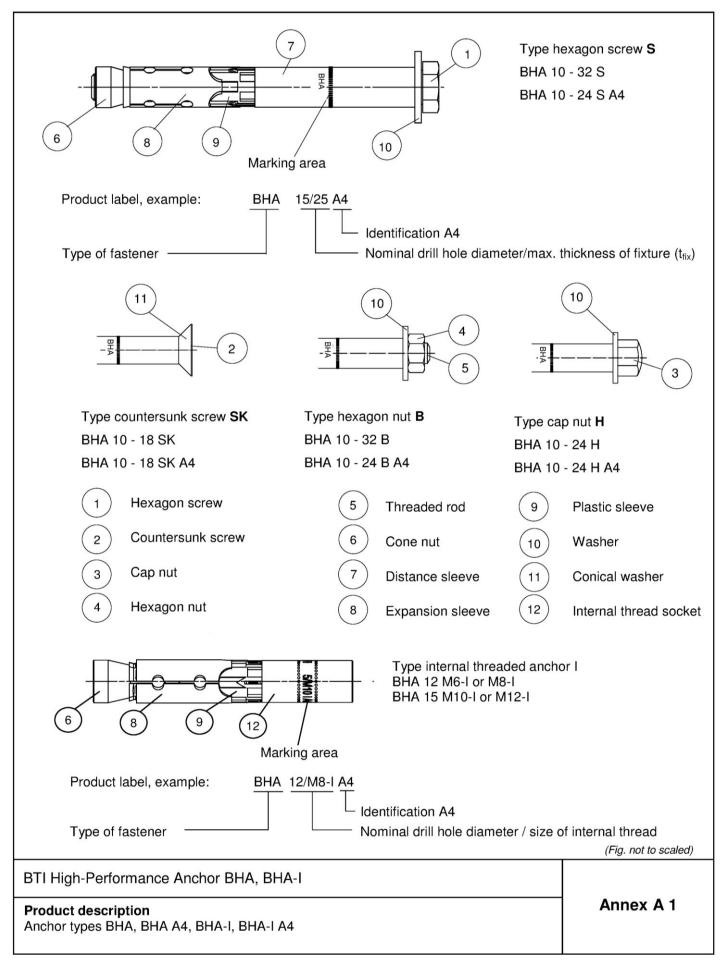

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 4 September 2018 by Deutsches Institut für Bautechnik

BD Dipl.-Ing. Andreas Kummerow Head of Department

beglaubigt: Baderschneider

| category C2 BHA | | | | / | | | | |
| | C2 BHA A4 | | / | | | | - | |

Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres (cracked or uncracked) according to EN 206:2013
- Strength classes C20/25 to C50/60 according to EN 206:2013

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (BHA, BHA A4, BHA-I, BHA-I A4)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to
 permanently damp internal conditions, if no particular aggressive conditions exist (BHA A4, BHA-I A4)
 Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater,
 chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants
 or road tunnels where de-icing materials are used)

Design:

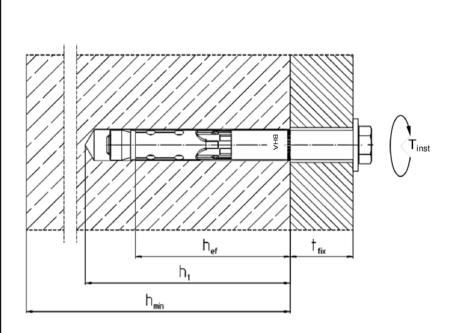

- Anchorages are to be designed under the responsibility of an engineer experienced in anchorages and concrete work
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Design of fastenings according to FprEN 1992-4: 2016 and EOTA Technical Report TR 055

Installation:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Hammer or hollow drilling according to Annex B5 and B6
- In case of aborted hole: New hole must be drilled at a minimum distance of twice the depth of the aborted hole or closer, if the hole is filled with a high strength mortar and only if the hole is not in the direction of the oblique tensile or shear load

Installation instruction for the BTI High-Performance anchor internal thread BHA-I and BHA-I A4 Continue with step 2, 3, and 4 Hammer Step Description Step Create Create drill hole with hammer drill, drill hole with hollow drill 1 clean drill hole and vacuum cleaner 2 Hammering in the anchor flushed with the surface of the concrete 3 Tighten the anchor. The included hexagon bit in the package should be used. Other tightening methods are allowed. Tighten the anchor in the concrete until the gap U is 3 - 5 mm or the required setting torque T_{inst} is reached. Only one of the above requirements has to be fulfilled. Attach the fixture and use a suitable screw or anchor rod. The length of the screw or anchor rod should be 4 determined depending on the thickness of fixture tfix, admissible tolerances, and available thread length ls.max and $I_{s,min}$ including the gap U. Tighten the screw with the torque ≤ max T_{fix} (max T_{fix} see table B3.1) Types of drill bits Hammer drill Hollow drill BTI High-Performance Anchor BHA, BHA-I Annex B 6 Intended use Installation instructions BHA-I, BHA-I A4

Table C10.3: Displacements under **tension loads** for **seismic performance category C2** for BHA and BHA A4

| Anchor type BHA-S,-SK,-B,-H and BHA-S A4,-SK A4,-B A4,-H A4 | | | BHA 12 | BHA 15 | BHA 18 | BHA 24 | BHA 28 | BHA 32 |
|-------------------------------------------------------------|------------------------------|--------|-----------|-----------|-----------|-----------|-----------|-----------|
| Displacement DLS | $\delta_{\text{N,C2 (DLS)}}$ | [mm] | 1,55 | 2,63 | 2,04 | 4,26 | 3, | 06 |
| Displacement ULS | $\delta_{\text{N,C2 (ULS)}}$ | - [mm] | 8,71 | 11,07 | 7,30 | 11,70 | 11 | ,44 |

Table C10.4: Displacements under **shear loads** for **seismic performance category C2** for BHA and BHA A4

| Anchor type BHA-S,-S BHA-S A4,-SK A4 | K and | 12 | ВНА 15 | 18 | ВНА 24 | 28 | ВНА 32 |
|-----------------------------------------|-------------------------------|-----------|-----------|-----------|-----------|-------------------|-----------|
| Displacement DLS | $\delta_{V,C2}$ (DLS) [mm] | 3,53 | 4,18 | 4,67 | 5,59 | 4, | 79 |
| Displacement ULS | $\delta_{	extsf{V,C2}}$ (ULS) | 6,62 | 7,38 | 9,03 | 14,09 | 9, | 95 |
| | | | | | | | |
| | | | | | | | |
| Anchor type BHA-B,-H BHA-B A4,-H A4 | l and | BHA 12 | BHA 15 | BHA 18 | BHA 24 | BHA 28 | BHA 32 |
| 7. | δν (2) (DI S) | | | | | | |
| BHA-B A4,-H A4 | | 12 | 15 | 18 | | 28 4,79 | |

| BTI High-Performance Anchor BHA, BHA-I | |
