and types of construction

Bautechnisches Prüfamt

An institution established by the Federal and
Laender Governments

European Technical Assessment

ETA-16/0043
of 28 May 2018

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the
European Technical Assessment:

Deutsches Institut für Bautechnik

Trade name of the construction product

Würth Concrete Screw W-BS/S, W-BS/A4, W-BS/HCR

Product family
to which the construction product belongs

Concrete Screw of sizes 6, 8, 10, 12 and 14 mm for use in
concrete

Manufacturer

Adolf Würth GmbH & Co. KG
Reinhold-Würth-Straße 12-17
74653 Künzelsau
DEUTSCHLAND

Manufacturing plant

Herstellwerk W9

This European Technical Assessment
contains

16 pages including 3 annexes which form an integral part
of this assessment

This European Technical Assessment is
issued in accordance with Regulation (EU)
No 305/2011, on the basis of

EAD 330232-00-0601 and EAD 330011-00-0601

This version replaces

ETA-16/0043 issued on 7 August 2017

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The Würth Concrete Screw W-BS an anchor in size 6, 8, 10, 12 and 14 mm made of galvanised steel respectively steel with zinc flake coating, made of stainless or high corrosion resistant steel. The anchor is screwed into a predrilled cylindrical drill hole. The special thread of the anchor cuts an internal thread into the member while setting. The anchorage is characterised by mechanical interlock in the special thread.

Product and product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex C 1 and C 2
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 1 and C 2
Displacements (static and quasi-static loading)	See Annex C 3
Characteristic resistance and displacements for seismic performance category C1	See Annex C 4

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C 5

English translation prepared by DIBt

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with European Assessment Documents EAD No. 330232-00-0601 and EAD No. 330011-00-0601, the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Issued in Berlin on 28 May 2018 by Deutsches Institut für Bautechnik

Product descriptions
Dimensions and markings

Annex A 3

Intended use

Anchorage subject to:

- static and quasi-static loads, all sizes and all embedment depth
- used for anchorages with requirements related to resistance of fire, all sizes and all embedment depth,
- used for anchorages with seismic actions category C1, sizes 8-14 for maximum embedment depth h_{nom3} .

Base materials:

- reinforced and unreinforced concrete according to EN 206-1:2000,
- strength classes C20/25 to C50/60 according to EN 206-1:2000,
- cracked and uncracked concrete.

Use conditions (Environmental conditions):

- The anchor may only be used in dry internal conditions: All screw types,
- Structural subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition no particular aggressive conditions exists: screw types made of stainless steel with marking A4,
- Structural subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition if particular aggressive conditions exists: screw types made of stainless steel with marking HCR.

Note: Such particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work,
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings,
- Anchorages under static or quasi-static actions, under seismic actions and under fire exposure are designed in accordance with FprEN 1992-4:2016 and EOTA Technical Report TR 055,
- The design of anchorages under shear load according to FprEN 1992-4:2016, Section 6.2.2 applies for all specified diameters d_f of clearance hole in the fixture in Annex B 2, Table B1.

Installation:

- Hammer drilling or vacuum drill bit. In case of using an vacuum drill bit an additional cleaning of the borehole is not necessary – see Annex B 3.
- Fastener installation in accordance with the manufacturer's specifications using the appropriate tools carried out by appropriately qualified personnel.
- After installation further turning of the anchor is not possible. The head of the anchor is supported on the fixture and is not damaged.
- The drill hole can be used without or with injection mortar WIT-BS.
- Adjustability according to Annex B 4: sizes 8-14, all anchorage depths.

Minimum spacing	s_{min}	[mm]	50		70	50	70			

Installation instructions

Create drill hole

Clean the bore hole.
In case of using vacuum drill bit there is no further cleaning necessary.

Set the screw

Install the screw

Installation was successful when the head of the anchor is fully supported on the fixture and it is not damaged

Würth Concrete Screw W-BS/S, W-BS/A4, W-BS/HCR

Intended use

Minimum thickness of member, minimum spacing, minimum edge distance and installation instructions

Annex B 3

Installation instructions for adjustability for sizes 8 - 14

Create drill hole

Clean the bore hole. In case of using vacuum drill bit there is no further cleaning necessary

Set the screw

Install the screw

Installation was successful when the head of the anchor is fully supported on the fixture and it is not damaged

The Anchor may be adjusted max. two times while the anchor may turn back at most 10 mm.

Install the screw again after the adjustment. The total allowed thickness of shims added during the adjustment process is 10mm. The final embedment depth after adjustment process must be equal or larger than h_{nom} .

Würth Concrete Screw W-BS/S, W-BS/A4, W-BS/HCR

Intended use

Installation instruction for adjustability

spacing																	
R30 bis R120	$S_{cr, fi}$		[mm]	$4 \times h_{ef}$													

The characteristic resistance to fire exposure for pull-out failure, concrete cone failure, concrete pry-out failure and concrete edge failure shall be calculated according to FprEN 1992-4. If no value for $N_{Rk,p}$ is given, in the equation D.4 and D.5 the value of $N^0_{Rk,c}$ shall be inserted instead of $N_{Rk,p}$.

Würth Concrete Screw W-BS/S, W-BS/A4, W-BS/HCR

Performances

Characteristic values of resistance to fire exposure

Annex C 5
