Designated according to Article 29 of Regulation (EU) No 305/2011 and member of EOTA (European Organisation for Technical Assessment)

European Technical Assessment

ETA-17/1004 of 12 February 2018

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the European Technical Assessment:	Deutsches Institut für Bautechnik
Trade name of the construction product	TILCA Nail Anchor N
Product family to which the construction product belongs	Load controlled expansion anchor for multiple use for non-structural applications in concrete
Manufacturer	EFCO Befestigungstechnik AG Grabenstraße 1 8606 NÄNIKON SCHWEIZ
Manufacturing plant	Werk 1, Deutschland
This European Technical Assessment contains	10 pages including 3 annexes which form an integral part of this assessment
This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of	ETAG 001 Part 6: "Anchors for multiple use for non-structural applications", January 2011, used as EAD according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011.

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The TILCA Nail Anchor N is an anchor made of galvanised steel, stainless steel (marking "A4") or high corrosion resistant steel 1.4529/1.4565 (marking "HCR") which is pushed into a drilled hole and expanded by loading. The anchor head is provided with connecting thread M6 or M8, with nail head, a coupling nut or with a loop, respectively.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

The essential characteristics regarding Mechanical resistance and stability are included under the Basic Works Requirement Safety in use.

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for Class A1
Resistance to fire	See Annex C 2

3.3 Safety in use (BWR 4)

Essential characteristic	Performance
Characteristic values	See Annex C 1

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with guideline for European technical approval ETAG 001, January 2011, used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011, the applicable European legal act is: [97/161/EC].

The system to be applied is: 2+

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

TILCA Nail Anchor N

Product description
Anchor types and marking

Annex A1

Deutsches Institut für Bautechnik DIBt

Specifications of intended use

Anchorages subject to:

- static and quasi-static loads

Base materials:

- reinforced or unreinforced normal weight concrete according to EN 206-1:2000
- strength classes C12/15 to C50/60 according to EN 206-1:2000
- cracked and non-cracked concrete

Use conditions (environmental conditions):	**Effective anchorage depth**
• Structures subject to dry internal conditions; (zinc plated steel, stainless steel or high corrosion resistant steel).	$h_{ef} \geq 30mm$ and $h_{ef,red} \geq 25mm$
• Structures subject to permanently damp internal conditions, if no particular aggressive conditions exist; (stainless steel or high corrosion resistant steel).	$h_{ef} \geq 30mm$ and $h_{ef,red} \geq 25mm$
• Structures subject to external atmospheric exposure including industrial and marine environment, if no particular aggressive conditions exist; (stainless steel or high corrosion resistant steel).	$h_{ef} \geq 30mm$
• Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions; (high corrosion resistant steel).	$h_{ef} \geq 30mm$

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used.)

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.).
- The design of the fixture is such that in case of excessive slip or failure of one anchor the load can be transmitted to neighbouring anchors.
- Anchorages under static or quasi-static actions for multiple use in non-structural applications are designed in accordance with:
  - ETAG 001, Annex C, Edition August 2010, design method C or
  - CEN/TS 1992-4: 2009, design method C
- Fasteners are only to be used for multiple use for non-structural application, according to ETAG 001 Part 6, Edition August 2010.
- Anchorages under fire exposure are designed in accordance with:
  - EOTA Technical Report TR 020, Edition May 2004 or
  - CEN/TS 1992-4: 2009, Annex D
  - It must be ensured that local spalling of the concrete cover does not occur.

Installation:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site,
- Anchor installation in accordance with the manufacturer's specifications and drawings and using the appropriate tools,
- Hammer drilling only,
- Anchor installation such that the effective setting depth is complied with. This compliance is ensured, if the admissible thickness of fixture is kept or the loop of TILCA Nail Anchor N-O rests on the concrete surface.

Respective spacing between fixing points [1) 2)]	s_{cr}	[mm]	100					
	for $c_{cr} \geq$		200					
Respective edge distance [2)]	c_{cr}	[mm]	100					
	for $s_{cr} \geq$		200					
Optimized for minimum edge distance								
Characteristic resistance **C12/15**	F_{Rk}	[kN]	1,5	1,5 [4]	1,5	2,0	2,0 [4]	1,5
Characteristic resistance **C20/25** to **C50/60**			2,0	2,0 [4]		2,5	2,5 [4]	
Design resistance **C12/15**	F_{Rd}	[kN]	1,0	1,0 [4]	1,0	1,3	1,3 [4]	1,0
Design resistance **C20/25** to **C50/60**			1,3	1,3 [4]		1,7	1,7 [4]	
Respective spacing between fixing points [1)]	c_{cr}	[mm]	50					
	for $s_{cr} \geq$		100					
Shear load with lever arm								
Characteristic resistance, **steel zinc plated**	$M^0_{Rk,s}$	[Nm]	9,2	12,7	[3)]	9,2	12,7	[3)]
Characteristic resistance, **stainless steel A4/HCR**			9,2	13,5	[3)]	9,2	13,5	[3)]
Partial safety factor	γ_{Ms}	-	1,25					

1) A fixing point is defined as:
- Single anchor,
- Double anchor group with a minimum spacing s of 50 mm ≤ s < s_{cr} or
- Quadruple anchor group with a minimum spacing s of 50 mm ≤ s < s_{cr}

If the spacing in a fixing point is greater than or equal to the respective spacing in this table, the characteristic resistances apply to every single anchor.

2) Intermediate values can be linearly interpolated.

3) Proof against failure due to shear load with lever arm is not required.

4) When applying a shear load to anchor version TILCA N-M, shear load with lever arm must be proven.
