Specific Part

1 Technical description of the product

The NIEDAX Nail Anchor NA is an anchor made of galvanised steel, stainless steel (marking "A4") or high corrosion resistant steel (marking "C") which is pushed into a drilled hole and expanded by loading.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C 2

3.2 Safety in use (BWR 4)

Essential characteristic	Performance
Characteristic resistance for all load directions and modes of failure for simplified design	See Annex C 1

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with European Assessment Document EAD No. 330747-00-0601, the applicable European legal act is: [97/161/EC].

The system to be applied is: 2+

Z72498.18 8.06.01-567/18

English translation prepared by DIBt

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

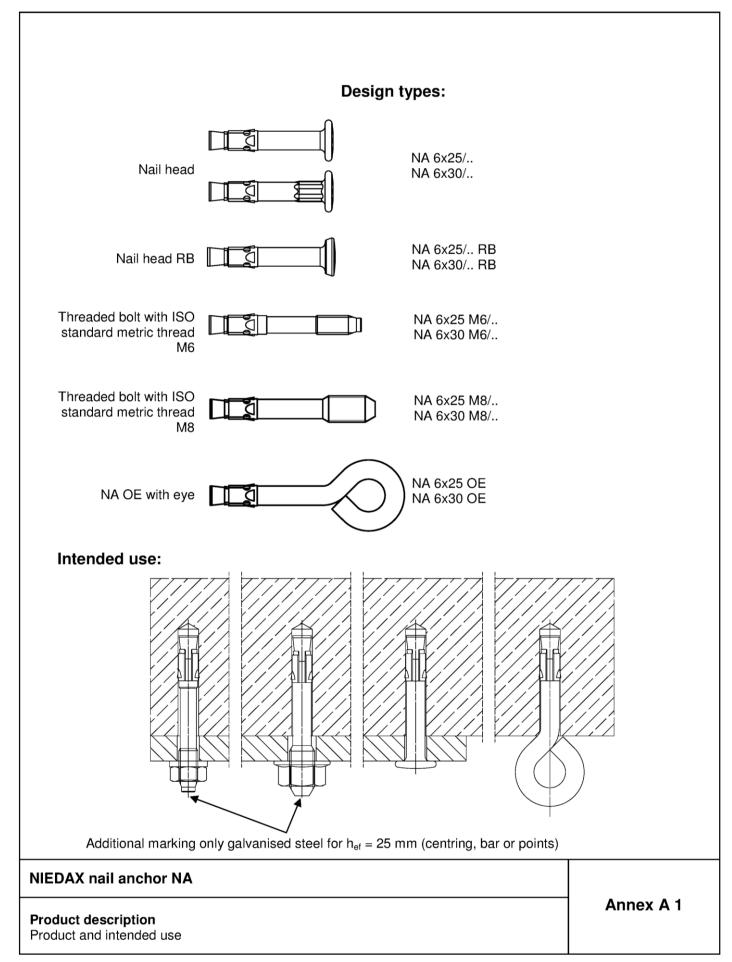

Issued in Berlin on 12 December 2018 by Deutsches Institut für Bautechnik

Marking:

Nail head

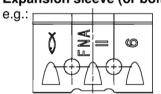

Marking at **X**: "O" for $h_{ef} = 25$ mm and "I" for $h_{ef} = 30$ mm;

Marking at Y: tfix

Marking at Z: "A4" or "C" (stainless steel)

Expansion sleeve (or bolt)

For stainless steel additional marking "A4" or "C"

Marking-Codes for Y:

	Marking Codes for 1.										
	Α	Q	Т	N 20	Р	В	L		Н		כ
t_{fix}	5	10	15	20	25	30	35	5	40		45
	D	٧	S	W 65	Х	Ε	N	1	Z		K
$t_{fi \times}$	50	55	60	65	70	75	80)	85		90
	(A)	F		(B) 105	(D)	(E)	C	à		J
t_{fix}	95	10	0	105	110	11	5	12	20	1	25
	Att 105 and the second of the firms I										

At t_{fix} > 125 mm the corresponding figure is marked.

Shaft (threaded bolt)

Marking e.g.: 6/10 thread size/thickness of the fixture

Marking e.g.: 8/10

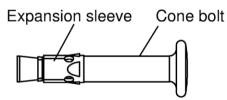

thread size /thickness of the fixture Exception: 8/5 no marking

Table A1: Materials

Designation Material: Galvanized steel			
Cone Bolt	Cold form steel or free cutting steel (zinc plated) Nominal steel tensile strength: f _{uk} ≤ 1000 N/mm²		
Expansion sleeve	Cold strip, EN 10139:2013 (zinc plated)		

Designation	Material: A4 (stainless steel)
Cone Bolt	Stainless steel EN 100882: 2014 Nominal steel tensile strength: f _{uk} ≤ 1000 N/mm²
Expansion sleeve	Stainless steel EN 10088: 2014

Designation	Material: C (high corrosion resistant steel)
Cone Bolt	High corrosion resistant steel EN 10088: 2014 Nominal steel tensile strength: f _{uk} ≤ 1000 N/mm²
Expansion sleeve	Stainless steel EN 10088: 2014

NIEDAX nail anchor NA	
Product description Marking and materials	Annex A 2

Specifications of intended use

Anchorages subject to:

- Static and quasi-static loads: All types and all embedment depths
- Only for use in concrete for redundant non-structural systems
- Fire exposure: only for concrete C20/25 to C50/60

Base materials:

- Compacted reinforced and unreinforced normal weight concrete without fibers according to EN 206:2013
- Strength classes C12/15 to C50/60 according to EN 206:2013
- Uncracked and cracked concrete: All types and all embedment depths

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (gvz, A4, C) with h_{ef} ≥ 25 mm
- Structures subject to permanently damp internal condition, if no other particular aggressive conditions exist
 - (A4, C) with $h_{ef} \ge 25$ mm
- Structures subject to external atmospheric exposure including industrial and marine environment, if no particular aggressive conditions exist (A4, C) with h_{ef} ≥ 30 mm
- Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions exist (C) with h_{ef} ≥ 30 mm

 Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution(e.g. in desulphurization plants or road tunnels where de-icing materials are used.)

Design:

- Anchorages have to be designed under the responsibility of an engineer experienced in anchorages and concrete work
- Verifiable calculation notes and drawings have to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Design of fasteners according to EN 1992-4:2018, Design Method C and Technical Report TR 055

Installation:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- · Create drill hole with hammer drill and clean the hole
- Anchor installation such that the effective anchorage depth is complied with. This compliance is
 ensured, if the admissible thickness of the fixture is kept. For the anchor type NA 6 x h_{ef} OE the loop
 has to sit direct at the concrete surface.
- In case of aborted hole: New hole must be drilled at a minimum distance of twice the depth of the
 aborted hole or closer, if the hole is filled with a high strength mortar and only if the hole is not in the
 direction of the oblique tensile or shear load

NA 6x30 OE A4/C	100	50		0,3	0,2		0,1	

Fire resistance class for all load directions for h _{ef} = 30+5 ¹⁾ mm								
Type of anchor	Spacing	Edge distance	Effective anchorage depth	Characteristic resistance F _{Rk,fi} [kN]				
	s _{cr,fi} ≥ [mm]	c _{cr,fi} ≥ [mm]	h _{ef} ≥ [mm]	R 30	R 60	R 90	R 120	
NA 6x30/A4/C	140	70	30+5 ¹⁾		,3 1,0		0,7	
NA 6x30 M6/A4/C NA 6x30 M8/A4/C	100	50	30+5	0,7		0,6		

The effective anchorage depth $h_{ef} = 30 + 5$ mm is reached by setting the anchor FNA 6x30/... 5 mm deeper with an anchor that is 5 mm longer than required for the actual thickness of the fixture.

In case of fire attack from more than one side, the edge distance shall be ≥ 300 mm
