Designated according to Article 29 of Regulation (EU) No 305/2011 and member of EOTA (European Organisation for Technical Assessment)

European Technical Assessment

ETA-18/0723 of 25 September 2018

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the European Technical Assessment:	Deutsches Institut für Bautechnik
Trade name of the construction product	fermacell flooring systems
Product family to which the construction product belongs	Thermal and sound insulating dry screed systems with prefabricated flooring elements
Manufacturer	Fermacell GmbH Düsseldorfer Landstraße 395 47259 Duisburg DEUTSCHLAND
Manufacturing plant	Plant 1; Plant 3; Plant 4; Plant 5
This European Technical Assessment contains	16 pages including 4 annexes which form an integral part of this assessment
This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of	EAD 190013-00-0502

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

This European Technical Assessment applies to the thermal and sound insulating dry screed systems consisting of prefabricated flooring elements and additional layers forming a kit. The flooring elements exist of two homogeneous gypsum fibre boards.

The prefabricated flooring elements are made of gypsum fibre boards according to EN 15283-2 with a density of 1000 - 1250 kg/m³ glued together with a 50 mm (± 1 mm) overlap. An insulation layer according to EN 13162, EN 13163 or EN 13171 can be glued under the gypsum fibre boards.

The gypsum fibre boards have the following characteristics according to EN 15283-2:

- Tolerance in length: 0 mm / - 5 mm
- Tolerance in width: 0 mm / - 4 mm
- Tolerance in thickness: Class C1 (± 0,2 mm)
- Squareness: 2,5 mm/m
- Bending strength: ≥ 4 N/mm²

The insulation layers have the following characteristics:

	Mineral wool according to EN 13162	Wood fibre according to EN 13171	EPS according to EN 13163
length	± 2 %	± 2 %	L(3)
width	± 1,5 %	± 1,5 %	W(3)
thickness	T7	T5 (-1 mm; +3 mm)	T(2)
squareness	5 mm/m (length and width)	5 mm/m (length and width)	S(5)
Compressive stress / strength	-	CS(10)150	CS(10)100
Compressibility	CP2 (≤ 2 mm)	-	-
Thermal conductivity	λ_D = 0,040	λ_D = 0,046	λ_D = 0,038

The following additional layers are covered:

- loose dry levelling compound made of aerated concrete with a bulk density of 430 ± 40 kg/m³
- loose fill honeycomb infill made of limestone split filled in a honeycomb board (mass per unit area: 42 – 48 kg/m² for a 30 mm layer, 84 – 96 kg/m² for a 60 mm layer)
- bonded levelling compound made of expanded polystyrene (EPS) granules and cement-based binders acc. to European Assessment Document 040635-00-1201 with a bulk density of the dry mixuture of 280 kg/m³ ± 5 %, a density of the bound material of 390 kg/m³ ± 10 %, a compressive stress at 10 % strain of 500 kPA and a reaction to fire class A2 – s1,d0[1]
- self-levelling compound (screed material and floor screeds with gypsum based binders) acc. to EN 13813 with a compressive strength of Class C 25, a bond strength of Class B 1.5, a bending strength of Class F 6 and a reaction to fire class A1.

[1] To be used on wood-based boards with a density ≥ 680 kg/m³ and a board thickness ≥ 12 mm or on substrates of classes A1 or A2 – s1,d0 according to EN 13501-1 with a board density ≥ 700 kg/m³ and a board thickness ≥ 10 mm

The prefabricated flooring elements covered by this European Technical Assessment are described in Table 1.

Table 1 Prefabricated flooring elements covered by the ETA

Prefabricated flooring elements		Mass per unit area
Type 1	- 25 mm prefabricated flooring element (2 x 12,5 mm gypsum fibre board)	29 kg/m² ± 5 %
Type 2	- 30 mm or 35 mm prefabricated flooring element (2 x 10 mm or 2 x 12,5 mm gypsum fibre board) with 10 mm wood fibre insulation layer (s' ≤ 120 MN/m³)	30 mm flooring element: 25 kg/m² ± 5 % 35 mm flooring element: 31 kg/m² ± 5 %
Type 3	- 30 mm or 35 mm prefabricated flooring element (2 x 10 mm or 2 x 12,5 mm gypsum fibre board) with 10 mm mineral wool insulation layer (s' ≤ 55 MN/m³)	30 mm flooring element: 25 kg/m² ± 5 % 35 mm flooring element: 30 kg/m² ± 5 %
Type 4	- 45 mm prefabricated flooring element (2 x 12,5 mm gypsum fibre board) with 20 mm mineral wool insulation layer (s' ≤ 35 MN/m³)	33 kg/m² ± 5 %
Type 5	- 50 mm prefabricated flooring element (2 x 10 mm gypsum fibre board) with 30 mm expanded polystyrene insulation layer (s' ≤ 55 MN/m³)	24 kg/m² ± 5 %

The flooring elements have the following dimensions:

Nominal lenghth: 1200 mm to 1500 mm

Nominal width: 500 mm to 600 mm

The thickness tolerance of the flooring elements amounts to ± 3 mm.

The kits covered by the ETA are formed by the prefabricated flooring elements according to Table 1 and one of the additional layers underneath the flooring elements according to Table 2.

Table 2 Kits covered by the ETA

Type of the flooring element according to Table 1	Additional layers[2]
1	- 10 – 100 mm loose dry levelling compound or
	- ≥ 10 mm bonded levelling compound
2	- No additional layer or
	- 10 – 100 mm loose dry levelling compound or
	- ≥ 10 mm bonded levelling compound or
	- 30 mm loose fill honeycomb infill in a honeycomb board or
	- 60 mm loose fill honeycomb infill in a honeycomb board
3	- No additional layer or
	- 10 – 100 mm loose dry levelling compound or
	- 60 mm loose fill honeycomb infill in a honeycomb board
4	- No additional layer or
	- 10 – 100 mm loose dry levelling compound or
	- 30 mm loose fill honeycomb infill in a honeycomb board or
	- 60 mm loose fill honeycomb infill in a honeycomb board
5	- No additional layer

The European Technical Assessment has been issued for the product on the basis of agreed data/information, deposited with Deutsches Institut für Bautechnik, which identifies the product that has been assessed. The European Technical Assessment applies only to products corresponding to this agreed data/information.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The thermal and sound insulating dry screed systems are intended to be used for thermal and / or sound insulation on floors inside buildings. The insulating dry screed systems can also be used for raising the height of floors or levelling out uneven floors. For levelling out uneven floors the additional layers mentioned in section 1 are used. The insulating dry screed systems are only exposed to static loads.

The insulating dry screed systems are always used with a floor covering. In wet rooms the insulating dry screed systems are lined with a waterproof floor covering.

[2] The self-levelling compound can be part of the kit for levelling out uneven floors (e. g. on a heavyweight reinforced concrete floor) without influencing the sound insulation performance

The insulating dry screed systems are laid completely supported on an even floor structure (if necessary unevenness is leveled off). Cross joints are avoided.

The flooring elements are laid with edges tightly abutted in such a way that no gaps will occur in the joint area. The joints are glued and fastened with flooring screws or staples.

Appropriate edge insulating strips are used at the boundary area on rising walls in order to avoid sonic bridges.

In case of using a loose dry levelling compound / loose fill honeycomb infill a trickle protection sheet can be laid before the insulating dry screed system will be built in.

The performance according to section 3 only applies if the insulating dry screed system is installed according to the manufacture's installation instructions and if it is protected from precipitation, wetting or weathering during transport, storage and installation.

The design value of the thermal conductivity shall be laid down according to relevant national provisions.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the insulating dry screed system of at least 25 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

For sampling, conditioning and testing the provisions of the EAD No 190013-00-0502 "Thermal and sound insulating dry screed systems with prefabricated flooring elements" apply.

3.1 Mechanical resistance and stability (BWR 1)

Not applicable.

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire prefabricated flooring elements type 1, 3 and 4 test acc. to EN ISO 9239-1:2010 test acc. to EN ISO 1716:2010	Class $A2_{fl}$ – s1[3] acc. to EN 13501-1:2007 + A1:2009
Reaction to fire prefabricated flooring elements type 2 and 5 test acc. to EN ISO 9239-1:2010 test acc. to EN ISO 11925-2:2010	Class B_{fl} – s1[4] acc. to EN 13501-1:2007 + A1:2009

[3] Thickness of the gypsum fibre layer ≥ 20 mm, thickness of the mineral wool layer ≥ 10 mm, to be used on wood or substrates of classes $A1_{fl}$ and $A2_{fl}$ according to EN 13501-1

[4] Thickness of the gypsum fibre ≥ 20 mm, thickness of the expanded polystyrene layer ≥ 20 mm, thickness of the wood fibre layer ≥ 10 mm, to be used on wood or substrates of classes $A1_{fl}$ and $A2_{fl}$ according to EN 13501-1

Essential characteristic	Performance
Reaction to fire loose dry levelling compound in accordance with Commission Decision 96/603/EC	Class A1 acc. to EN 13501-1:2007 + A1:2009
Reaction to fire Honeycomb boards with loose fill honeycomb infill (limestone split)	No performance assessed

3.3 Hygiene, health and the environment (BWR 3)

No performance assessed

3.4 Safety and accessibility (BWR 4)

Essential characteristic	Performance
Resistance to functional failure from concentrated load test according to Annex 1 of the EAD 190013-00-0502	see Annex D

3.5 Protection against noise (BWR 5)

Essential characteristic	Performance
Impact sound reduction of the kit on a heavyweight standard floor test according to the relevant parts of EN ISO 10140 (category II according to EN ISO 10140-1, Annex H) rating according to EN ISO 717-2	see Annex A
Airborne sound insulation of the floor in which the kit is used test according to the relevant parts of EN ISO 10140 rating according to EN ISO 717-1	see Annex B
Impact sound insulation of the floor in which the kit is used test according to the relevant parts of EN ISO 10140 (category II according to EN ISO 10140-1, Annex H) rating according to EN ISO 717-2	see Annex C

3.6 Energy economy and heat retention (BWR 6)

No performance assessed

3.7 Sustainable use of natural resources (BWR 7)

For the sustainable use of natural resources no performance was investigated for this product.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with EAD No. 190013-00-0502, the applicable European legal act is: 2000/273/EC.

The system to be applied is:

3 for any use except for uses subject to regulations on reaction to fire

For reaction to fire the system to be applied is:

1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.
