Approval body for construction products and types of construction

Bautechnisches Prüfamt

An institution established by the Federal and Laender Governments

Designated according to Article 29 of Regulation (EU) No 305/2011 and member of EOTA (European Organisation for Technical Assessment)

European Technical Assessment

ETA-16/0515 of 17 June 2019

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the European Technical Assessment:	Deutsches Institut für Bautechnik
Trade name of the construction product	HVU2
Product family to which the construction product belongs	Bonded Fastener for use in concrete
Manufacturer	Hilti AG Liechtenstein Feldkircherstraße 100 9494 Schaan FÜRSTENTUM LIECHTENSTEIN
Manufacturing plant	Hilti Corporation
This European Technical Assessment contains	27 pages including 3 annexes which form an integral part of this assessment
This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of	EAD 330499-01-0601
This version replaces	ETA-16/0515 issued on 14 December 2017

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The HVU2 is a bonded anchor consisting of a mortar capsule Hilti HVU2 and a steel element. The steel element consist of

- an anchor rod Hilti HAS-U or Hilti HAS-(E) with washer and hexagon nut of sizes M8 to M30 or
- an internally threaded sleeve HIS-(R)N of sizes M8 to M20.

The mortar capsule is placed in the hole and the steel element is driven by machine as specified in Annex B7.

The anchor rod is anchored via the bond between steel element, chemical mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance for static and quasi-static tension load	See Annex C1 to C5
Characteristic resistance for static and quasi-static shear load	See Annex C6 to C8
Displacements for static and quasi-static loads	See Annex C9
Characteristic resistance for seismic performance categories C1	See Annex C10
Characteristic resistance and displacements for seismic performance categories C2	See Annex C11
Characteristic resistance for 100 years working life	No performance assessed

3.2 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with EAD 330499-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 17 June 2019 by Deutsches Institut für Bautechnik

Table A1: Materials

Designation	Material
Metal parts made of zinc coated steel	
HAS-(E)	M8 to M16: Strength class 5.8, f_{uk} = 570 N/mm², f_{yk} = 456 N/mm². M20 and M24: Strength class 5.8, f_{uk} = 500 N/mm², f_{yk} = 400 N/mm². Rupture elongation (l_0 = 5d) > 8% ductile. M8 to M30: Strength class 8.8, f_{uk} = 800 N/mm², f_{yk} = 640 N/mm². Rupture elongation (l_0 = 5d) > 12% ductile. Electroplated zinc coated ≥ 5 µm, (F) hot dip galvanized ≥ 45 µm.
HAS-U-…	M8 to M24: Strength class 5.8, f_{uk} = 500 N/mm², f_{yk} = 400 N/mm². Rupture elongation (l_0 = 5d) > 8% ductile. M8 to M30: Strength class 8.8, f_{uk} = 800 N/mm², f_{yk} = 640 N/mm². Rupture elongation (l_0 = 5d) > 12% ductile. Electroplated zinc coated ≥ 5 µm, (F) hot dip galvanized ≥ 45 µm.
Internally threaded sleeve HIS-N	Electroplated zinc coated ≥ 5 µm.
Washer	Electroplated zinc coated ≥ 5 µm, hot dip galvanized ≥ 45 µm.
Nut	Strength class of nut adapted to strength class of threaded rod. Electroplated zinc coated ≥ 5 µm, hot dip galvanized ≥ 45 µm.
Metal parts made of stainless steel	
HAS-(E)R	M8 to M16: Strength class 70, f_{uk} = 700 N/mm², f_{yk} = 500 N/mm². M20 and M24: Strength class 70, f_{uk} = 700 N/mm², f_{yk} = 450 N/mm². M27 and M30: Strength class 70, f_{uk} = 500 N/mm², f_{yk} = 210 N/mm². Rupture elongation (l_0 = 5d) > 8% ductile. Stainless steel A4 according to EN 10088-1:2014.
HAS-U-R	M8 to M24: Strength class 70, f_{uk} = 700 N/mm², f_{yk} = 450 N/mm². M27 and M30: Strength class 70, f_{uk} = 500 N/mm², f_{yk} = 210 N/mm². Rupture elongation (l_0 = 5d) > 8% ductile. Stainless steel A4 according to EN 10088-1:2014.
Internally threaded sleeve HIS-RN	Stainless steel A4 according to EN 10088-1:2014.
Washer	Stainless steel A4 according to EN 10088-1:2014.
Nut	Strength class of nut adapted to strength class of threaded rod. Stainless steel A4 according to EN 10088-1:2014.
Metal parts made of high corrosion resistant steel	
HAS-(E)HCR HAS-U-HCR	M8 to M20: f_{uk} = 800 N/mm², f_{yk} = 640 N/mm². M24: f_{uk} = 700 N/mm², f_{yk} = 400 N/mm². Rupture elongation (l_0 = 5d) > 8% ductile. High corrosion resistant steel according to EN 10088-1:2014.
Washer	High corrosion resistant steel according to EN 10088-1:2014.
Nut	Strength class of nut adapted to strength class of threaded rod. High corrosion resistant steel according to EN 10088-1:2014.

Specifications of intended use

Anchorages subject to:

- Static and quasi static loading.
- Seismic performance category C1. HAS-U-… and HAS-(E)… size M10 to M30.
- Seismic performance category C2. HAS-U-… and HAS-(E)… size M16 and M20.

Base material:

- Compacted reinforced or unreinforced normal weight concrete without fibres according to EN 206:2013.
- Strength classes C20/25 to C50/60 according to EN 206:2013.
- Cracked and uncracked concrete.

Temperature in the base material:

- **At installation**
  -10 °C to +40 °C
  For the standard variation of temperature and rapid variation of temperature after installation.
- **In-service**
  Temperature range I: -40 °C to +40 °C
  (max. long term temperature +24 °C and max. short term temperature +40 °C)
  Temperature range II: -40 °C to +80 °C
  (max. long term temperature +50 °C and max. short term temperature +80 °C)
  Temperature range III: -40 °C to +120 °C
  (max. long term temperature +72 °C and max. short term temperature +120 °C)

Table B1: Specifications of intended use

	Foil capsule HVU2 with …	
Elements	HAS-U-…, HAS-(E)… 	HIS-(R)N 
Hammer drilling with hollow drill bit TE-CD or TE-YD 	M12 to M30	M8 to M20
Hammer drilling 	M8 to M30	M8 to M20
Diamond coring 	M10 to M30	M8 to M20

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions
  (zinc coated steel, stainless steel or high corrosion resistant steel).
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal conditions, if no particular aggressive conditions exist
  (stainless steel or high corrosion resistant steel).
- Structures subject to external atmospheric exposure and to permanently damp internal conditions, if other particular aggressive conditions exist
  (high corrosion resistant steel).
  Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution
  (e.g. in desulphurization plants or road tunnels where de-icing products are used).

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- The anchorages are designed in accordance with:
  EN 1992-4:2018 and EOTA Technical Report TR 055.
  Anchorages under seismic actions shall be positioned outside of critical regions (e.g. plastic hinges) of the concrete structure. Fastening in stand-off installation or with a grout layer under seismic action are not covered in this European technical assessment (ETA).

Installation:

- Concrete condition I1:
  Installation in dry or wet (water saturated) concrete and use in service in dry or wet concrete.
- Drilling technique: hammer drilling, diamond coring (e.g. Hilti DD 30-W or other Hilti DD machines), hammer drilling with hollow drill bit TE-CD, TE-YD.
- Installation direction:
  D2: downward and horizontal installation for HVU2 M8 to M30.
  D3: downward and horizontal and upward (e.g. overhead) installation for HVU2 M8 to M24.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.

Cleaning alternatives

Manual Cleaning (MC):
Hilti hand pump for blowing out drill holes with diameters $d_0 \leq 18$ mm and drill hole depths $h_0 \leq 10$ d.

Compressed Air Cleaning (CAC):
Air nozzle with an orifice opening of minimum 3,5 mm in diameter.

Automatic Cleaning (AC):
Cleaning is performed during drilling with Hilti TE-CD and TE-YD drilling system including vacuum cleaner.

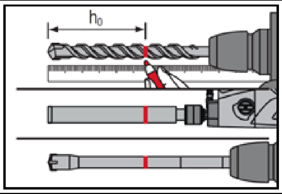
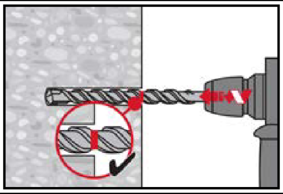
Installation instruction

Hole drilling



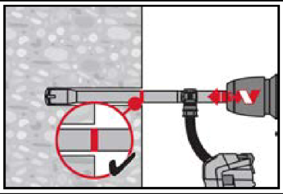
Mark required drilling depth h_0 on drill bit or core bit

a) Hammer drilling: For dry or wet concrete.



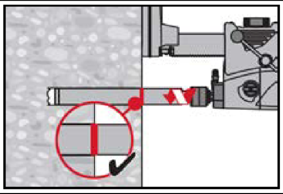
Drill hole to the required embedment depth with a hammer drill set in rotation-hammer mode using an appropriately sized carbide drill bit.

b) Hammer drilling with Hilti hollow drill bit: For dry or wet concrete.



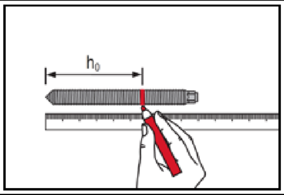
Drill hole to the required embedment depth with an appropriately sized Hilti TE-CD or TE-YD hollow drill bit attached to Hilti vacuum cleaner. This drilling system removes the dust and cleans the drill hole during drilling when used in accordance with the user's manual. After drilling is completed, proceed to the “setting the element” step in the installation instruction.

c) Diamond coring: For dry or wet concrete.

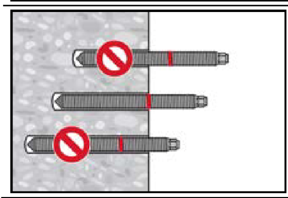


Diamond coring is permissible when suitable diamond core drilling machines and the corresponding core bits are used.

Check setting depth



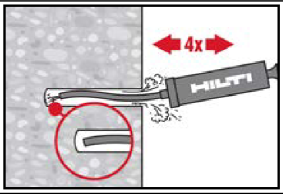
Mark required setting depth on fastener (see table B3).



Check the setting depth with the marked element.
The element has to fit in the hole until the required embedment depth, not deeper.
If it is not possible to insert the element to the required embedment depth, drill deeper.

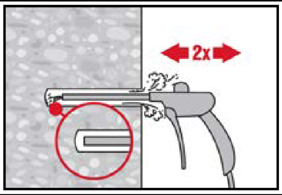
Drill hole cleaning: Just before setting an anchor, the drill hole must be free of dust and debris. Inadequate hole cleaning = poor load values.

Manual Cleaning (MC): For drill hole diameters $d_0 \leq 18$ mm and drill hole depths $h_0 \leq 10$ d.



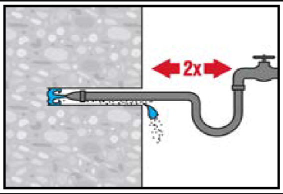
The Hilti hand pump may be used for blowing out drill holes.
Blow out at least 4 times from the back of the drill hole until return air stream is free of noticeable dust.

Compressed Air Cleaning (CAC): For all drill hole diameters d_0 and all drill hole depths h_0.

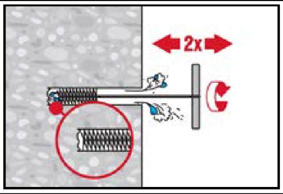


Blow 2 times from the back of the hole (if needed with nozzle extension) over the whole length with oil-free compressed air (min. 6 bar at 6 m³/h) until return air stream is free of noticeable dust.

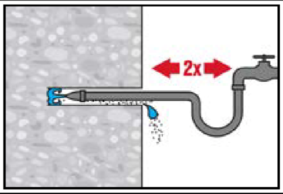
Cleaning of hammer drilled flooded holes and diamond cored holes:
For all drill hole diameters d_0 and all drill hole depths h_0.



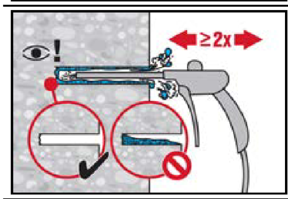
Flush 2 times by inserting a water hose (water-line pressure) to the back of the hole until water runs clear.



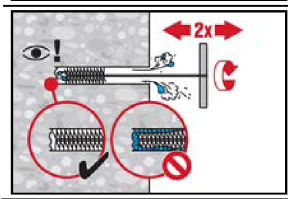
Brush 2 times with the specified brush (see table B5) by inserting the steel brush Hilti HIT-RB to the back of the hole (if needed with extension) in a twisting motion and removing it.
The brush must produce natural resistance as it enters the drill hole (brush Ø ≥ drill hole Ø) - if not, the brush is too small and must be replaced with the proper brush diameter.



Flush 2 times by inserting a water hose (water-line pressure) to the back of the hole until water runs clear.



Blow 2 times from the back of the hole (if needed with nozzle extension) over the whole length with oil-free compressed air (min. 6 bar at 6 m³/h) until return air stream is free of noticeable dust and water.



Brush 2 times with the specified brush (see Table B5) by inserting the steel brush Hilti HIT-RB to the back of the hole (if needed with extension) in a twisting motion and removing it.
The brush must produce natural resistance as it enters the drill hole (brush Ø ≥ drill hole Ø) - if not, the brush is too small and must be replaced with the proper brush diameter.

HVU2	**Annex B8**
Intended Use Installation instructions	

Deutsches Institut für Bautechnik DIBt

	Blow again with compressed air 2 times until return air stream is free of noticeable dust and water.
Setting the element	
	Insert the foil capsule with the peak ahead to the back of the hole.
	Drive the anchor rod with the plugged tool into the hole, applying moderate pressure. Rotary hammer tool in rotation hammer mode (450 RPM to maximum 1300 RPM). Setting tool see Annexes B6. After reaching the embedment depth switch off setting machine immediately.
	Overhead installation for HVU2 M8 to M24. For overhead installation use the overhead dripping cup HIT-OHC.
	Loading the anchor: After required curing time t_{cure} (see Table B4) the anchor can be loaded. The applied installation torque shall not exceed the values T_{max} given in Table B2 and Table B3.

Table C1: continued

HAS-U-… and HAS-(E)...			M8	M10	M12	M16	M20	M24	M27	M30
Influence factors ψ on bond resistance τ_{Rk}										
Hammer drilled holes and **hammer drilled holes with hollow drill bit TE-CD or TE-YD**										
Uncracked concrete: Factor for concrete strength	ψ_c	C30/37	1,08							
		C40/50	1,15							
		C50/60	1,20							
Cracked concrete: Factor for concrete strength	ψ_c	C30/37	1,04							
		C40/50	1,07							
		C50/60	1,10							
Cracked and uncracked concrete: Sustained load factor	ψ^0_{sus}	24 °C / 40 °C	1,00							
		50 °C / 80 °C	0,73							
		72 °C / 120 °C	0,73							
Diamond cored holes										
Uncracked concrete: Factor for concrete strength	ψ_c	C30/37	1,08							
		C40/50	1,15							
		C50/60	1,20							
Cracked concrete: Factor for concrete strength	ψ_c	C50/60	1,00							
Cracked and uncracked concrete: Sustained load factor	ψ^0_{sus}	24 °C / 40 °C	0,78							
		50 °C / 80 °C	0,71							
		72 °C / 120 °C	0,78							
Concrete cone failure										
Factor for uncracked concrete	$k_{ucr,N}$	[-]	11,0							
Factor for cracked concrete	$k_{cr,N}$	[-]	7,7							
Edge distance	$c_{cr,N}$	[mm]	$1{,}5 \cdot h_{ef}$							
Spacing	$s_{cr,N}$	[mm]	$3{,}0 \cdot h_{ef}$							
Splitting failure										
Edge distance $c_{cr,sp}$ [mm] for		$h / h_{ef} \geq 2{,}0$	$1{,}0 \cdot h_{ef}$							
		$2{,}0 > h / h_{ef} > 1{,}3$	$4{,}6\, h_{ef} - 1{,}8\, h$							
		$h / h_{ef} \leq 1{,}3$	$2{,}26\, h_{ef}$							
Spacing	$s_{cr,sp}$	[mm]	$2 \cdot c_{cr,sp}$

Deutsches Institut für Bautechnik DIBt

Table C2: Essential characteristics for internally threaded sleeve HIS-(R)N under tension load in concrete

HIS-(R)N			**M8**	**M10**	**M12**	**M16**	**M20**
Installation safety factor							
Hammer drilling and drilling with hollow drill bit TE-CD or TE-YD	γ_{inst}	[-]	1,0				
Diamond coring	γ_{inst}	[-]	1,0				
Steel failure							
HIS-N with screw or threaded rod grade 8.8	$N_{Rk,s}$	[kN]	25	46	67	125	116
Partial factor	$\gamma_{Ms,N}$ 1)	[-]	1,5				
HIS-RN with with screw or threaded rod grade 70	$N_{Rk,s}$	[kN]	26	41	59	110	166
Partial factor	$\gamma_{Ms,N}$ 1)	[-]	1,87				2,4
Combined pullout and concrete cone failure							
Effective embedment depth	h_{ef}	[mm]	90	110	125	170	205
Effective diameter of fastener	d	[mm]	12,5	16,5	20,5	25,4	27,6
Uncracked concrete C20/25 in **hammer drilled holes and hammer drilled holes with hollow drill bit TE-CD or TE-YD**							
Temperature range I: 24 °C / 40 °C	$\tau_{Rk,ucr}$	[N/mm^2]	11,0				
Temperature range II: 50 °C / 80 °C	$\tau_{Rk,ucr}$	[N/mm^2]	9,0				
Temperature range III: 72 °C / 120 °C	$\tau_{Rk,ucr}$	[N/mm^2]	5,5				
Uncracked concrete C20/25 in **diamond cored holes**							
Temperature range I: 24 °C / 40 °C	$\tau_{Rk,ucr}$	[N/mm^2]	11,0				
Temperature range II: 50 °C / 80 °C	$\tau_{Rk,ucr}$	[N/mm^2]	9,0				
Temperature range III: 72 °C / 120 °C	$\tau_{Rk,ucr}$	[N/mm^2]	5,5				
Cracked concrete C20/25 in **hammer drilled holes and hammer drilled holes with hollow drill bit TE-CD or TE-YD**							
Temperature range I: 24 °C / 40 °C	$\tau_{Rk,cr}$	[N/mm^2]	6,5				
Temperature range II: 50 °C / 80 °C	$\tau_{Rk,cr}$	[N/mm^2]	5,0				
Temperature range III: 72 °C / 120 °C	$\tau_{Rk,cr}$	[N/mm^2]	3,0				
Cracked concrete C20/25 in **diamond cored holes**							
Temperature range I: 24 °C / 40 °C	$\tau_{Rk,cr}$	[N/mm^2]	4,5				
Temperature range II: 50 °C / 80 °C	$\tau_{Rk,cr}$	[N/mm^2]	3,5				
Temperature range III: 72 °C / 120 °C	$\tau_{Rk,cr}$	[N/mm^2]	2,5

HVU2

Performances
Essential characteristics under shear loads in concrete

Annex C8

Table C5: Displacements for HAS-U-… and HAS-(E) under tension load[1)]

HAS-U-… and HAS-(E)…			**M8**	**M10**	**M12**	**M16**	**M20**	**M24**	**M27**	**M30**
Uncracked concrete temperature range I to III										
Displacement	δ_{N0}-factor	[mm/(N/mm²)]	0,06						0,15	
	$\delta_{N\infty}$-factor	[mm/(N/mm²)]	0,10						0,30	
Cracked concrete temperature range I to III										
Displacement	δ_{N0}-factor	[mm/(N/mm²)]	0,10						0,15	
	$\delta_{N\infty}$-factor	[mm/(N/mm²)]	0,14						0,30	

1) Calculation of the displacement
$\delta_{N0} = \delta_{N0}$-factor · τ; $\delta_{N\infty} = \delta_{N\infty}$-factor · τ (τ: bond stress due to applied tension force).

Table C6: Displacements for HAS-U-… and HAS-(E) under shear load[1)]

HAS-U-… and HAS-(E)…			**M8**	**M10**	**M12**	**M16**	**M20**	**M24**	**M27**	**M30**
Displacement	δ_{V0}-factor	[mm/kN]	0,06	0,06	0,05	0,04	0,04	0,03		
	$\delta_{V\infty}$-factor	[mm/kN]	0,09	0,08	0,08	0,06	0,06	0,05		

1) Calculation of the displacement
$\delta_{V0} = \delta_{V0}$-factor · V; $\delta_{V\infty} = \delta_{V\infty}$-factor · V (V: applied shear force).

Table C7: Displacements for internally threaded sleeves HIS-(R)N under tension load[1)]

HIS-(R)N			**M8**	**M10**	**M12**	**M16**	**M20**
Uncracked concrete temperature range I to III							
Displacement	δ_{N0}-factor	[mm/(N/mm²)]	0,05				0,15
	$\delta_{N\infty}$-factor	[mm/(N/mm²)]	0,10				0,15
Cracked concrete temperature range I to III							
Displacement	δ_{N0}-factor	[mm/(N/mm²)]	0,13				0,20
	$\delta_{N\infty}$-factor	[mm/(N/mm²)]	0,15				0,20

1) Calculation of the displacement
$\delta_{N0} = \delta_{N0}$-factor · τ; $\delta_{N\infty} = \delta_{N\infty}$-factor · τ (τ: bond stress due to applied tension force).

Table C8: Displacements for internally threaded sleeves HIS-(R)N under shear load[1)]

HIS-(R)N			**M8**	**M10**	**M12**	**M16**	**M20**
Displacement	δ_{V0}-factor	[mm/kN]	0,06	0,06	0,05	0,04	0,04
	$\delta_{V\infty}$-factor	[mm/kN]	0,09	0,08	0,08	0,06	0,06

1) Calculation of the displacement
$\delta_{V0} = \delta_{V0}$-factor · V; $\delta_{V\infty} = \delta_{V\infty}$-factor · V (V: applied shear force).
