Laender Governments

European Technical Assessment

ETA-18/0727
of 14 January 2019

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the
European Technical Assessment:

Deutsches Institut für Bautechnik

Trade name of the construction product

DHTI - Cantilever step stair

Product family
to which the construction product belongs

Prefabricated stair with steps made of steel for use as
indoor stair in buildings

Manufacturer

Deutsches HolztreppeInstitut e.V.
Von der Heydt
66115 Saarbrücken
DEUTSCHLAND

Manufacturing plant

Plant 1 - 100

This European Technical Assessment
contains

13 pages including 3 annexes which form an integral part
of this assessment

This European Technical Assessment is
issued in accordance with Regulation (EU)
No 305/2011, on the basis of

EAD 340006-00-0506

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The *DHTI - Cantilever step stair* is a prefabricated stair system, which consists of steps and fasteners.

The steps consist of a welded steel section, which is fixed by wall ties on the wall side in a concrete wall. Alternatively the steel section can be screwed or welded on steel columns.

The product description is given in Annex A. The material values, dimensions and tolerances of the components of the stair not indicated in the annexes shall correspond to the values laid down in the technical documentation¹.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the stair is used in compliance with the specifications and conditions given in Annex B.

The verification and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the stair of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

¹ The technical documentation comprises all information of the manufacturer necessary for the production, installation and maintenance of the stair; these are in particular the structural analysis, design drawings and the manufacturer's installation instructions. The part to be treated confidentially is deposited with Deutsches Institut für Bautechnik and, as far as this is relevant to the tasks of the approved bodies involved in the procedure of attestation of the AVCP-System, shall be handed over to the approved body.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Load-bearing capacity of stair	See Annex C2
Load-bearing capacity of fixings	See technical documentation of this European Technical Assessment
Load/displacement behaviour	See Annex C2
Vibration behaviour	Construction type 1 according to Annex A1: Walking on the stair does not result in vibration of the entire construction. Construction type 2 according to Annex A1: First natural frequency: $f_1 \geq 5$ Hz (inclusive a single mass of 100 kg) Deflection under a single load $F = 1$ kN: $w \leq 5$ mm
Prevention of progressive collapse	Failure of individual components of the stair does not lead to a progressive collapse of the complete stair
Residual load-bearing capacity	Local material failure does not lead to an abrupt total loss of load-bearing capacity of the stair
Long-term behaviour	Load-bearing capacity are ensured under an appropriate use and maintenance over the indicated working life
Resistance to earthquakes	No performance assessed
Durability against physical, chemical and biological agents	Adequate durability for the intended use under an appropriate use and maintenance

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Components made of steel: A1
Fire resistance	No performance assessed

3.3 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Release of formaldehyde	No formaldehyde treated materials are used
Release of pentachlorophenol	No pentachlorophenol treated materials are used
Radioactive emission	Not relevant

English translation prepared by DIBt

3.4 Safety in use (BWR 4)

Essential characteristic	Performance
Geometry	See Annex C1
Slipperiness	No performance assessed
Equipment of the stair for a safe use	No performance assessed
Safe breakage of components	No brittle failure of individual components
Impact resistance	No performance assessed

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD No. 340006-00-0506 the applicable European legal act is: 1999/89/EC

The System to be applied is: 2+

In addition, with regard to reaction to fire for products covered by the European Assessment Document EAD No. 340006-00-0506 the applicable European legal act is: 2001/596/EC

The System to be applied is: 4

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 14 January 2019 by Deutsches Institut für Bautechnik

BD Dipl.-Ing. Andreas Kummerow
Head of Department

beglaubigt:
Stiller

Types of plan

Walking line is exemplified, position may be chosen freely within the walking zone.
Walking zone is 20% of the clear width of the stair in the middle of the stair

Types of construction

Type 1
Concrete wall

Type 2
Steel columns

DHTI – Cantilever step stair

Product

Annex A1

Joint to concrete wall with bolts (\geq C20/25)

Joint to concrete wall with anchor (\geq C20/25)

Dimensions in mm, more details according (geometry, joints etc.) according to the technical documentation

DHTI – Cantilever step stair

Steps and joint to concrete wall

Annex A2

Joint to steel columns

Screwed joint

Welded joint

Dimensions in mm, more details (geometry, joints etc.) according to technical documentation

DHTI – Cantilever step stair

Steps and joint to steel columns

Annex A3

Table 1: Minimum dimensions and materials of relevant stair components

Component of stair	Minimum dimensions			Material
Step (box section) ³⁾	Thickness / Width	[mm]	46 / 320	Steel S235
Column ²⁾	Rectangle section	[mm]	90 / 50 / 4	Steel S235
Fasteners	Diameter	[mm]	12	Steel ¹⁾

- 1) characteristic values of material according to technical documentation
 2) maximum length: 3.00 m; Fixed at bottom and hinged support at the top; maximum distance between columns: 260 mm
 3) Wood covering and covering of natural stone with maximum dead load of 0.56 kN/m² is possible

DHTI – Cantilever step stair

Steps and joint to steel columns

Annex A4

Specification of intended use (Part 1)

Intended use:

- European Technical Assessment applies for a construction system.
- For the specific case of use the corresponding type of stair is manufactured within the context of the values defined in this European Technical Assessment.
- Values of this ETA applies to all types of stairs, the real dimensions follow in accordance with the relevant case of use.

Stair subject to:

- Static and quasi static loads

Use conditions:

- Indoor stair
- Air temperatures between +5 °C and +30 °C
- Relative air humidity between 30% and 70%
- To the individual requirements handrail and barrier can be attached to the stair optionally. Conditions for possible handrail/barrier:
 - Dead load ≤ 0.50 kN/m
 - Height ≤ 1.0 m
 - Distance of baluster ≤ 0.90 m

Design:

- Design of the stair according to the annexes and the technical documentation of this European Technical Assessment.
- Fastening of the stair to the construction works according to the annexes and the technical documentation of this Technical European Assessment.
- Verification of the transmission of loads to the construction works by the civil engineer responsible for the construction works.
- Load bearing capacity at ultimate limit state:

$$q_k \cdot \gamma_Q \leq q_{Rk} / \gamma_M$$

$$Q_k \cdot \gamma_Q \leq Q_{Rk} / \gamma_M$$

$$h_k \cdot \gamma_Q \cdot \psi_0 \leq h_{Rk} / \gamma_M$$

with

q_{Rk}, Q_{Rk}, h_{Rk} : characteristic values of resistance; see Table 3

γ_M : recommended material partial safety factor; see Table 3

q_k, Q_k, h_k : characteristic values of imposed loads according to EN 1991-1-1:2002 + AC:2009

$\gamma_Q = 1.5$: recommended partial safety factor, in absence of other national regulations

$\psi_0 = 0.7$: recommended combination factor, in absence of other national regulations

- Maximum characteristic values of imposed loads under consideration of the partial factors mentioned above; see Table 5

DHTI – Cantilever step stair

Specification of intended use (Part 1)

Annex B1

Specification of intended use (Part 2)

Installation:

- Installation by personal appropriately trained and authorized by the manufacturer of the assessment by means of the technical documentation of this European Technical Assessment
- Installation only in the way as specified in the technical documentation of this European Technical Assessment
- Sufficient support of the stair when assembling
- Installation of stair components without imposed deformations
- Bolted connection are protected such that they will not be loosened by vibrations

Indication of the manufacturer:

- Ensure that all persons involved will be appropriately informed about the specific conditions according to sections 1 and 2 (including the annexes to which reference is being made as well as the not confidential parts of the technical documentation deposited to this European Technical Assessment)
- Instructions for use should provide information as to use, maintenance and repair of the stair

DHTI – Cantilever step stair

Specification of intended use (Part 2)

Annex B2

Table 2: Geometry

designation			dimension	
			minimum	maximum
going	step on walking line ¹⁾	[mm]	210	320 ²⁾
rise of the stairs ¹⁾		[mm]	140 ²⁾	210
pitch of the walking line ¹⁾		[°]	21	45
overlap of the steps		[mm]	30	- ³⁾
number of rises		[-]	3	18
openings	between stairs and wall	[mm]	0	0
	between consecutive steps	[mm]	- ³⁾	164
clear width of stairs		[mm]	500	1000
length of the flight		[mm]	- ³⁾	
thickness of steps		[mm]	46	- ³⁾

¹⁾ values are constant within one flight

²⁾ tolerance between nominal value and actual value = ± 5 mm

³⁾ not relevant

- 1 going
- 2 rise
- 3 overlap
- 4 thickness of step
- 5 opening between consecutive steps
- 6 length of the flight

DHTI – Cantilever step stair

Geometry of the stair

Annex C1

Table 3: Load-bearing capacity – Characteristic values of resistance

Type of loading	Characteristic values of resistance			γ_M ¹⁾
vertical variable uniformly distributed load	q_{Rk}	[kN/m ²]	5.63	1.25
vertical variable single load	Q_{Rk}	[kN]	3.75	
horizontal variable uniformly distributed load on barrier	h_{Rk}	[kN/m]	0.66	

¹⁾ Recommended partial safety factor, in absence of other national regulations

Table 4: Deflections under loading

Deflection of the step under single point load			
single load	Q_k	[kN]	2.0
clear width of the stair	L	[mm]	1000
deflection under load F_S related to the clear width of the stair	w	[-]	$\leq L/150$

Table 5: Imposed loads

Type of loading	Imposed loads		
vertical variable uniformly distributed load	q_k	[kN/m ²]	3.0
vertical variable single load	Q_k	[kN]	2.0
horizontal variable uniformly distributed load on barrier	h_k	[kN/m]	0.5
