Approval body for construction products and types of construction

Bautechnisches Prüfamt

An institution established by the Federal and Laender Governments

Designated according to Article 29 of Regulation (EU) No 305/2011 and member of EOTA (European Organisation for Technical Assessment)

European Technical Assessment

ETA-19/0161 of 8 May 2019

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the European Technical Assessment:	Deutsches Institut für Bautechnik
Trade name of the construction product	Hilti HIT-HY 170 with HAS-U
Product family to which the construction product belongs	Metal Injection anchors for use in masonry
Manufacturer	Hilti Aktiengesellschaft 9494 SCHAAN FÜRSTENTUM LIECHTENSTEIN
Manufacturing plant	Hilti Werke
This European Technical Assessment contains	24 pages including 3 annexes which form an integral part of this assessment
This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of	EAD 330076-00-0604

Deutsches Institut für Bautechnik
Kolonnenstraße 30 B | 10829 Berlin | GERMANY | Phone: +49 30 78730-0 | Fax: +49 30 78730-320 | Email: dibt@dibt.de | www.dibt.de

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The Injection system Hilti HIT-HY 170 with HAS-U for masonry is a bonded anchor (injection type) consisting of a mortar foil pack with injection mortar Hilti HIT-HY 170, a perforated sieve sleeve and an anchor rod with hexagon nut and washer in the range of M8 to M12. The steel elements are made of zinc coated steel, stainless steel or high corrosion resistant steel.

The anchor rod is placed into a drilled hole filled with injection mortar and is anchored via the bond and/or mechanical interlock between steel element, injection mortar and masonry.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic values for resistance	See Annexes C1 to C7
Displacements	See Annex C2 to C7

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1

3.3 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330076-00-0604 the applicable European legal act is: [97/177/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 8 May 2019 by Deutsches Institut für Bautechnik

Product description Materials	

Deutsches Institut für Bautechnik DIBt

Specifications of intended use

Base materials:

- Solid brick masonry (use category b) according to Annex B3.
  Note: The characteristic resistances are also valid for larger brick sizes and larger compressive strengths of the masonry unit.
- Hollow brick masonry (use category c) according to Annex B3 and B4.
- Mortar strength class of the masonry: M2,5 at minimum according to EN 998-2:2010.
- For masonry made of other solid, hollow or perforated bricks, the characteristic resistance of the anchor may be determined by job site tests according to EOTA Technical Report TR 053, April 2016, under consideration of the β-factor given in Annex C1, Table C1.

Table B1: Overview use categories

Anchorages subject to:		**HIT-HY 170 with HAS-U-…**	
		In solid bricks	**In hollow bricks**
Hole drilling		Hammer mode, Rotary mode	Rotary mode
Static and quasi static loading		Annex: C1 (steel), C2, C3	Annex: C1 (steel), C4, C5, C6, C7
Use category: dry or wet structure		Category **d/d** - **Installation and use** in structures subject to **dry** internal conditions. Category **w/d** - **Installation in dry or wet** substrate **and use** in structures subject to **dry** internal conditions Category **w/w** - **Installation and use** in structures subject to **dry or wet** environmental conditions	
Installation direction		Horizontal	
Use category		b (solid masonry)	c (hollow or perforated masonry)
Temperature in the base material at installation		+5 °C to +40 °C (Table B7)	0 °C to +40 °C (Table B8)
In-service temperature	Temperature range Ta:	-40 °C to +40 °C	(max. long term temperature +24 °C and max. short term temperature +40 °C)
	Temperature range Tb:	-40 °C to +80 °C	(max. long term temperature +50 °C and max. short term temperature +80 °C)

Deutsches Institut für Bautechnik DIBt

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions
  (zinc coated steel, stainless steel or high corrosion resistant steel).
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal conditions, if no particular aggressive conditions exist
  (stainless steel or high corrosion resistant steel).
- Structures subject to external atmospheric exposure and to permanently damp internal conditions, if other particular aggressive conditions exist
  (high corrosion resistant steel).
  Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution
  (e.g. in desulphurization plants or road tunnels where de-icing products are used).

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and masonry work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to supports).
- Anchorages under static or quasi-static loading are designed in accordance with:
  EOTA Technical Report TR 054, April 2016, Design method A.

Installation:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.

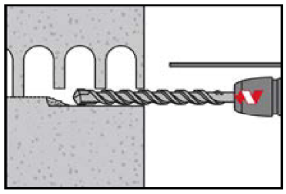
Installation

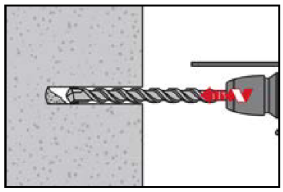
Hole drilling

If no significant resistance is felt over the entire depth of the hole when drilling (e.g. in unfilled butt joints), the anchor should not be set at this position.

Drilling mode



In hollow and solid bricks (use category c): rotary mode
Drill hole to the required embedment depth with a hammer drill set in rotary mode using an appropriately sized carbide drill bit.

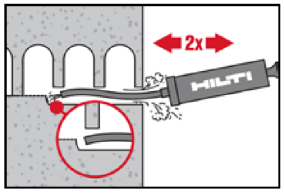


In solid bricks (use category b): hammer mode
Drill hole to the required embedment depth with a hammer drill set in hammer mode using an appropriately sized carbide drill bit.

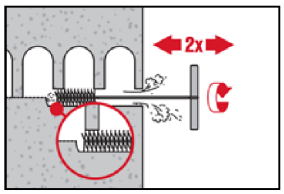
Drill hole cleaning

Just before setting the anchor, the drill hole must be free of dust and debris.
Inadequate hole cleaning = poor load values.

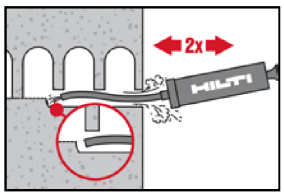
Manual Cleaning (MC): For hollow and solid bricks



Blow out at least 2 times from the back of the drill hole with the Hilti hand pump until return air stream is free of noticeable dust.



Brush 2 times with the specified steel brush (tables B5 to B6) by inserting the steel brush Hilti HIT-RB to the back of the hole in a twisting motion and removing it.
The brush must produce natural resistance as it enters the drill hole (brush Ø ≥ drill hole Ø) - if not the brush is too small and must be replaced with the proper brush diameter.

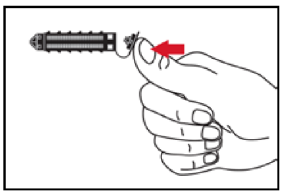


Blow out again with the Hilti hand pump at least 2 times until return air stream is free of noticeable dust.

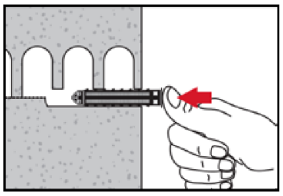
Hilti HIT-HY 170 with HAS-U	**Annex B8**
Intended Use Installation instructions	

Deutsches Institut für Bautechnik DIBt

Injection preparation in masonry with holes or voids: installation with sieve sleeve HIT-SC

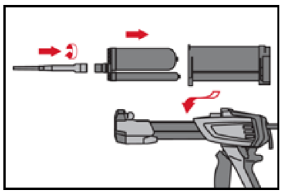


Sieve sleeve HIT-SC
Close lid.

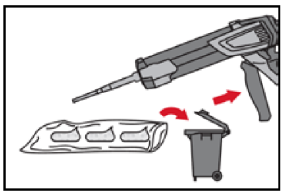


Insert sieve sleeve manually.

For all applications



Tightly attach new Hilti mixing nozzle HIT-RE-M to foil pack manifold (snug fit).
Do not modify the mixing nozzle.
Observe the instruction for use of the dispenser and foil pack.
Check foil pack holder for proper function. Do not use damaged foil packs / holders. Insert foil pack into foil pack holder and put holder into HIT-dispenser.

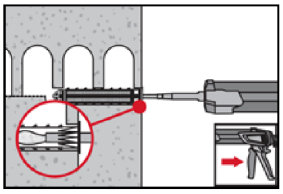


Discard initial adhesive. The foil pack opens automatically as dispensing is initiated. Depending on the size of the foil pack an initial amount of adhesive has to be discarded. Discarded quantities are:

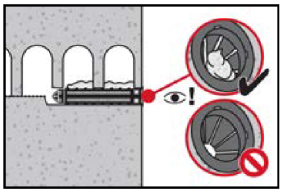
2 strokes	for 330 ml foil pack,
3 strokes	for 500 ml foil pack.

Inject adhesive without forming air voids

Installation with sieve sleeve HIT-SC



Sieve sleeve HIT-SC
Insert mixer approximately 1 cm through the lid. Inject required amount of adhesive (see table B5). Adhesive must emerge through the lid.



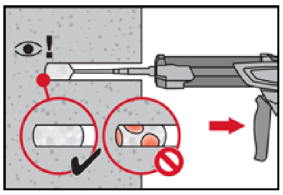
Control amount of injected mortar. Adhesive has to protrude into the lid.

After injection is completed, depressurize the dispenser by pressing the release trigger. This will prevent further adhesive discharge from the mixer.

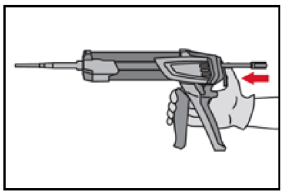
Hilti HIT-HY 170 with HAS-U	**Annex B9**
Intended Use Installation instructions	

Deutsches Institut für Bautechnik DIBt

Solid bricks: installation without sieve sleeve

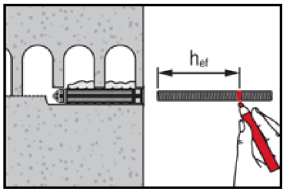


Inject the adhesive starting at the back of the hole, slowly withdrawing the mixer with each trigger pull.
Fill holes approximately 2/3 full to ensure that the annular gap between the anchor and the base material is completely filled with adhesive along the embedment length.

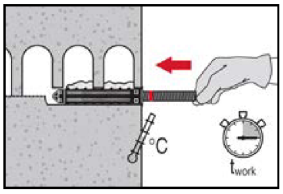


After injection is completed, depressurize the dispenser by pressing the release trigger. This will prevent further adhesive discharge from the mixer.

Setting the element: Before use, verify that the element is dry and free of oil and other contaminants.

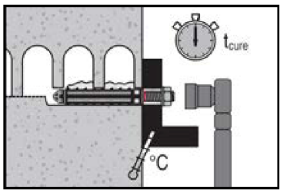


HAS-U-… in hollow and solid bricks:
Pre-setting (Figure A1 to Figure A2)
Mark the element to the required embedment depth h_{ef} acc. to Table B5 and B6.



Set element to the required embedment depth until working time t_{work} has elapsed. The working time t_{work} is given in Table B7 and Table B8.

Loading the anchor



After required curing time t_{cure} (see Table B7 and Table B8) the anchor can be loaded.
The applied installation torque shall not exceed the values T_{max} given in Table B5 to Table B6.

Table C17: Group factor for group fastenings

Group factor	$\alpha_{g,N\,II}$ $\alpha_{g,V\,II}$ $\alpha_{g,N\,\perp}$ $\alpha_{g,V\,\perp}$ [-]	2 at c_{cr} and s_{cr}

Table C18: Characteristic tension resistance at edge distance c ≥ c_{cr}

Use category				**w/w = w/d**		**d/d**	
Service temperature range				**(Ta)**	**(Tb)**	**(Ta)**	**(Tb)**
Anchor type and size		h_{ef} [mm]	f_b [N/mm²]	**N_{Rk} [kN]**			
HAS-U + HIT-SC +	M8, M10, M12	80	12	3,0	2,5	3,0	2,5
			20	3,5	3,0	3,5	3,0

Table C19: Characteristic shear resistance at edge distance c ≥ c_{cr}

Use category				**w/w = w/d**		**d/d**	
Service temperature range				**(Ta)**	**(Tb)**	**(Ta)**	**(Tb)**
Anchor type and size		h_{ef} [mm]	f_b [N/mm²]	**V_{Rk} [kN]**			
HAS-U + HIT-SC +	M8, M10, M12	80	12	2,0			
			20	3,0			

Table C20: Displacements

h_{ef} [mm]	N [kN]	δ_{N0} [mm]	$\delta_{N\infty}$ [mm]	V [kN]	δ_{V0} [mm]	$\delta_{V\infty}$ [mm]
80	0,9	0,2	0,3	0,9	1,0	1,5

Hilti HIT-HY 170 with HAS-U

Performances hollow clay brick Hlz, 10DF
Installation parameters and group factor.
Characteristic values of resistance under tension and shear loads. Displacements

Annex C4

Deutsches Institut für Bautechnik DIBt

Brick type: Hollow calcium silicate brick KSL, 8DF

Table C21: Description of brick

Brick type		[-]	KSL-12-1,4-8 DF
Bulk density	ρ	[kg/dm³]	≥ 1,4
Compressive strength	f_b	[N/mm²]	≥ 12 or ≥ 20
Code		[-]	EN 771 – 2
Producer		[-]	KS Südbayern (D)
Brick dimensions		[mm]	248 x 240 x 238
Minimum wall thickness	h_{min}	[mm]	≥ 240

Drawing of the brick see Table B4

Table C22: Installation parameter for all anchor combinations (see Table B3)

Anchor type		see Table B3
Edge distance	$c_{min} = c_{cr}$ [mm]	125
Spacing	$s_{min\,II} = s_{cr\,II}$ [mm]	248
	$s_{min\,\perp} = s_{cr\,\perp}$ [mm]	240

Table C23: Group factor for group fastenings

Group factor	$\alpha_{g,N\,II}$ $\alpha_{g,V\,II}$ $\alpha_{g,N\,\perp}$ $\alpha_{g,V\,\perp}$ [-]	2 at c_{cr} and s_{cr}

Table C24: Characteristic tension resistance at edge distance c ≥ c_{cr}

Use category				**w/w = w/d**		**d/d**	
Service temperature range				**(Ta)**	**(Tb)**	**(Ta)**	**(Tb)**
Anchor type and size		h_{ef} [mm]	f_b [N/mm²]	**N_{Rk} [kN]**			
HAS-U + HIT-SC +	M8, M10, M12	80	12	3,0	2,5	3,5	3,0
			20	4,0	3,5	5,0	4,5

Table C25: Characteristic shear resistance at edge distance c ≥ c_{cr}

Use category				**w/w = w/d**		**d/d**	
Service temperature range				**(Ta)**	**(Tb)**	**(Ta)**	**(Tb)**
Anchor type and size		h_{ef} [mm]	f_b [N/mm²]	**V_{Rk} [kN]**			
HAS-U + HIT-SC +	M8, M10, M12	80	12	8,5			
			20	12,0			

Table C26: Displacements

h_{ef} [mm]	N [kN]	δ_{N0} [mm]	$\delta_{N\infty}$ [mm]	V [kN]	δ_{V0} [mm]	$\delta_{V\infty}$ [mm]
80	1,8	0,2	0,3	3,4	2,5	3,8

Hilti HIT-HY 170 with HAS-U

Performances hollow silica brick KSL, 8DF
Installation parameters and group factor.
Characteristic values of resistance under tension and shear loads. Displacements

Annex C5

Deutsches Institut für Bautechnik DIBt

Brick type: Hollow lightweight concrete brick Hbl, 16DF

Table C27: Description of brick

Brick type		[-]	Hbl-4-0,7
Bulk density	ρ	[kg/dm³]	≥ 0,8
Compressive strength	f_b	[N/mm²]	≥ 2 or ≥ 6
Code		[-]	EN 771-3
Producer		[-]	Knobel (D)
Brick dimensions		[mm]	495 x 240 x 238
Minimum wall thickness	h_{min}	[mm]	≥ 240

Drawing of the brick see Table B4

Table C28: Installation parameter for all anchor combinations (see Table B3)

Anchor type		see Table B3
Edge distance	$c_{min} = c_{cr}$ [mm]	250
Spacing	$s_{min\,II} = s_{cr\,II}$ [mm]	240
	$s_{min\,\perp} = s_{cr\,\perp}$ [mm]	240

Table C29: Group factor for group fastenings

Group factor	$\alpha_{g,N\,II}$ $\alpha_{g,V\,II}$ $\alpha_{g,N\,\perp}$ $\alpha_{g,V\,\perp}$ [-]	2 at c_{cr} and s_{cr}

Table C30: Characteristic tension resistance at edge distance c ≥ c_{cr}

Use category			**w/w = w/d**		**d/d**	
Service temperature range			**(Ta)**	**(Tb)**	**(Ta)**	**(Tb)**
Anchor type and size	h_{ef} [mm]	f_b [N/mm²]	**N_{Rk} [kN]**			
HAS-U + HIT-SC + M8, M10, M12	80	2	1,2	0,9	1,5	1,2
		6	2,0	1,5	2,5	2,0
