This European Technical Assessment
contains

20 pages including 3 annexes which form an integral part
of this assessment

This European Technical Assessment is
issued in accordance with Regulation (EU)
No 305/2011, on the basis of

EAD 330196-01-0604

This version replaces

ETA-19/0019 issued on 21 January 2019

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The Unio-Plus VWS-Schlagdübel Termoz CN and Unio-Plus WDVS-Schlagdübel CNplus 8 consists of an anchor sleeve with an enlarged shaft made of polypropylene (virgin material), an insulation plate made of glass fibre reinforced polyamide (virgin material) (Unio-Plus VWS-Schlagdübel Termoz CN/ 250-390) and a special compound nail consisting of two parts, one made of glass fibre reinforced polyamide for the shaft element and the other part made of galvanised steel.

The specific nail for the anchor type Unio-Plus VWS-Schlagdübel Termoz CN/ 250 - 390 is made of galvanized steel which is used together with a separate plastic cylinder made of glass fibre reinforced polyamide.

The serrated expanding part of the anchor sleeve is slotted.

The anchor may in addition be combined with the anchor plates DT 90, DT 110 and DT 140.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verification and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 25 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Safety and accessibility in use (BWR 4)

Essential characteristic	Performance
Characteristic tension resistance	See Annex C 1 and C 2
Edge distances and spacing	See Annex B 2
Plate stiffness	See Annex C 4
Displacements	See Annex C 4

3.2 Energy economy and heat retention (BWR 6)

Essential characteristic	Performance
Point thermal transmittance	See Annex C 3

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with EAD No. 330196-01-0604, the applicable European legal act is: [97/463/EC].

The system to be applied is: 2+

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

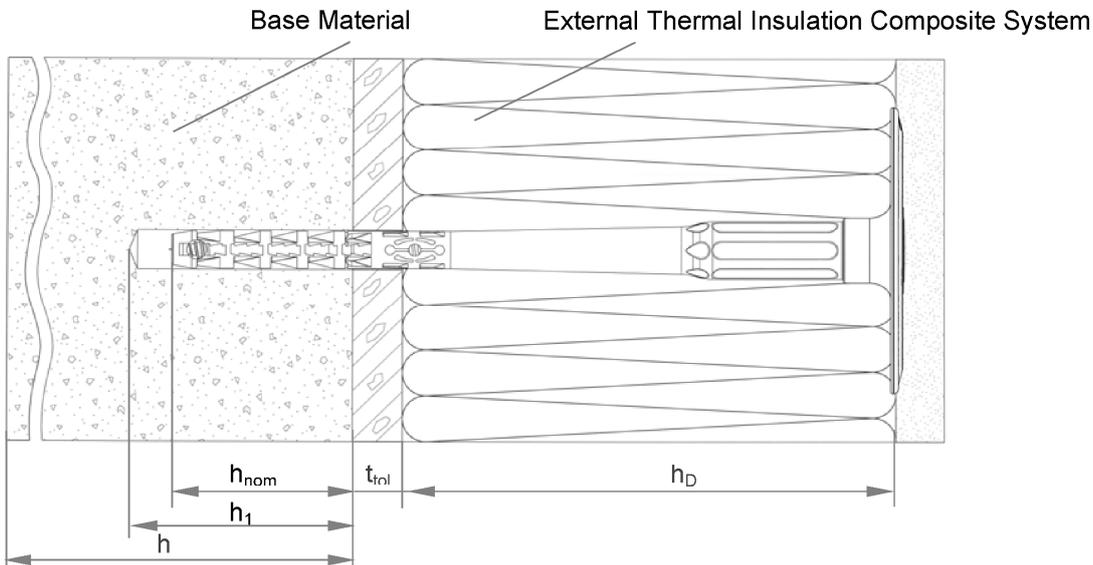

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Issued in Berlin on 21 May 2019 by Deutsches Institut für Bautechnik

Annex A2

Unio-Plus VWS-Schlagdübel Termoz CN / 110-230

1) Various length of the anchors are possible

e.g. for Unio-Plus VWS-Schlagdübel Termoz CN / 110-230:

$$110 \text{ mm} \geq L_a \leq 230 \text{ mm}$$

$$L_a = L_n + 4 \text{ mm}$$

Determination of maximum thickness of insulation: $h_D = L_a - h_{nom} - t_{tol}$

e.g. for Unio-Plus VWS-Schlagdübel Termoz CN 8x150:

$$L_a = 148 \text{ mm}, h_{nom} = 35 \text{ mm}, t_{tol} = 10 \text{ mm}$$

$$h_D = 148 - 35 - 10 \approx 100$$

Table A3.1: Dimensions Unio-Plus VWS-Schlagdübel Termoz CN / 110-230

Anchor type	Anchor sleeve		Specific compound nail		
	Ø d _d [mm]	h _{nom} [mm]	Ø d _n [mm]	L ₁ [mm]	Ø d ₁ [mm]
Unio-Plus VWS-Schlagdübel Termoz CN / 110-230	8	35 / 55 ²⁾	4,5	40	8

²⁾ Only for group E

Product description

Dimensions Unio-Plus VWS-Schlagdübel Termoz CN / 110-230

Annex A3

Unio-Plus VWS-Schlagdübel Termoz CN / 250 – 390

Marking: Brand, name and size of anchor, diameter, groups, optional markings see drawing of anchor plate, example e.g. Unio-Plus VWS-Schlagdübel Termoz CN, ABCDE

Various lengths of the anchors are possible:

e.g. for Unio-Plus VWS-Schlagdübel Termoz CN / 250 – 390:

$$250 \text{ mm} \geq L_{a1} + L_{a2} \leq 390 \text{ mm}$$

$$L_a = L_{a1} + L_{a2} = L_n + 160,5 \text{ mm}$$

Determination of maximum thickness of insulation: $h_D = L_a - h_{nom} - t_{tol}$

e.g. for Unio-Plus VWS-Schlagdübel Termoz CN 8x330: $L_a = 328 \text{ mm}$, $h_{nom} = 35 \text{ mm}$, $t_{tol} = 10 \text{ mm}$

$$h_D = 328 - 35 - 10 \approx 280 \text{ mm}$$

Table A4.1: Dimensions Unio-Plus VWS-Schlagdübel Termoz CN / 250 – 390

Specifications of intended use

Anchorage subject to:

- The anchor may only be used for transmission of wind suction loads and shall not be used for the transmission of dead loads of the external thermal insulation composite system (ETICS).

Base materials:

- Normal weight concrete (base material group A), in accordance with Annex C1 and C2.
- Solid masonry (base material group B), in accordance with Annex C1 and C2.
- Hollow or perforated masonry (base material group C), in accordance with Annex C1 and C2.
- Lightweight aggregate concrete (base material group D), in accordance with Annex C1 and C2.
- Autoclaved aerated concrete (base material group E), in accordance with Annex C1 and C2.
- For other base materials of the base material groups A, B, C, D and E the characteristic resistance of the anchor may be determined by job site tests acc. to EOTA Technical Report TR 051 Edition December 2016.

Temperature Range:

- 0°C to +40°C (max. short term temperature +40°C and max. long term temperature +24°C).

Design:

- The anchorages are designed under the responsibility of an engineer experienced in anchorages and masonry work with the partial safety factors $\gamma_M = 2,0$ and $\gamma_F = 1,5$ in absence of other national regulations.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchors is indicated on the design drawings.
- Fasteners are only to be used for multiple fixings of ETICS.

Installation:

- Hole drilling by the drill modes according to Annex C1 and C2.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters on the site.
- Installation temperature from 0°C to +40°C
- Exposure to UV due to solar radiation of the anchor not protected by rendering ≤ 6 weeks.

Performance
Point thermal transmittance

Annex C3

Table C4.1: Plate stiffness in accordance with EOTA Technical Report TR 026 : 2016 – 05

Anchor type	Size of the anchor plate [mm]	Load resistance of the anchor plate [kN]	Plate stiffness [kN/mm]
Unio-Plus VWS-Schlagdübel Termoz CN and Unio-Plus WDVS-Schlagdübel CNplus 8	60	1,7	0,6

Table C4.2: Displacements Unio-Plus VWS-Schlagdübel Termoz CN

Base material	Unio-Plus VWS-Schlagdübel Termoz CN		
	Tension load F [kN]	Displacements δ [mm]	
Concrete \geq C12/15 – C50/60 (EN 206-1:2000)	0,30	< 0,3	
Clay brick (EN 771-1:2011), Mz 12	0,30	< 0,5	
Calcium silicate solid bricks (EN 771-2:2011), KS 12	0,30	< 0,3	
Vertically perforated clay brick (EN 771-1:2011), Hlz 12	0,2	< 0,2	
Hollow calcium silicate brick (EN 771-2:2011), KSL 12	0,15	< 0,2	
Hollow calcium silicate brick (EN 771-2:2011), KSL 20	0,25	< 0,3	
Solid concrete blocks (EN 771-3:2011), Vbn 20	0,25	< 0,3	
Hollow brick lightweight concrete (EN 771-3:2011), Hbl 4	0,2	< 0,2	
Lightweight concrete solid blocks (EN 771-3:2011), Vbl 8	0,2	< 0,2	
Lightweight aggregate concrete (EN 1520:2011, EN 771-3:2011)	LAC 4	0,15	< 0,3
	LAC 6	0,20	
Autoclaved aerated concrete blocks EN 771-4:2011	AAC 4	0,10	< 0,2
	AAC 6	0,13	< 0,3

Table C4.3: Displacements Unio-Plus WDVS-Schlagdübel CNplus 8

Base material	Unio-Plus WDVS-Schlagdübel CNplus 8		
	Tension load F [kN]	Displacements δ [mm]	
Concrete \geq C12/15 – C50/60 (EN 206-1:2000)	0,30	< 0,1	
Weather resistant concrete shell \geq C20/25 (EN 206-1:2000)	0,30	< 0,1	
Clay brick (EN 771-1:2011), Mz 20	0,30	< 0,2	
Calcium silicate solid bricks (EN 771-2:2011), KS 20	0,30	< 0,2	
Solid concrete blocks (EN 771-3:2011), Vbn 20	0,30	< 0,2	
Lightweight concrete solid blocks (EN 771-3:2011), Vbl 10	0,25	< 0,1	
Vertically perforated clay brick (EN 771-1:2011), Hlz 48	0,25	< 0,2	
Vertically perforated clay brick (EN 771-1:2011), Hlz 12	0,17	< 0,1	
Hollow calcium silicate brick (EN 771-2:2011), KSL 16	0,17	< 0,1	
Hollow brick lightweight concrete (EN 771-3:2011), Hbl 10	0,20	< 0,1	
Lightweight aggregate concrete (EN 1520:2011, EN 771-3:2011)	LAC 6	0,13	< 0,2
Autoclaved aerated concrete blocks (EN 771-4:2011)	AAC 4	0,10	< 0,1
