### General Part

Technical Assessment Body issuing the  
European Technical Assessment:

Trade name of the construction product

Product family  
to which the construction product belongs

Manufacturer

Manufacturing plant

This European Technical Assessment  
contains

This European Technical Assessment is  
issued in accordance with Regulation (EU)  
No 305/2011, on the basis of

Deutsches Institut für Bautechnik

Alfa Wedge Anchor and Alfa Wedge Anchor-IG

Mechanical fastener for use in concrete

Alfa GmbH  
Ferdinand-Porsche-Straße 10  
73479 Ellwangen  
DEUTSCHLAND

Werk 1,D

36 pages including 3 annexes which form an integral part  
of this assessment

EAD 330232-00-0601

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

**European Technical Assessment****ETA-19/0593**

English translation prepared by DIBt

Page 3 of 36 | 19 September 2019

**Specific Part****1 Technical description of the product**

The Alfa Wedge Anchor and Alfa Wedge Anchor-IG is a fastener made of zinc plated steel, stainless steel or high corrosion resistant steel which is placed into a drilled hole and anchored by torque-controlled expansion. The following fastener types are covered:

- Fastener type Alfa Wedge Anchor with external thread, washer and hexagon nut, sizes M8 to M27,
- Fastener type Alfa Wedge Anchor-IG S with internal thread, hexagon head nut and washer S-IG, sizes M6 to M12,
- Fastener type Alfa Wedge Anchor-IG SK with internal thread, countersunk head screw and countersunk washer SK-IG, sizes M6 to M12,
- Fastener type Alfa Wedge Anchor-IG B with internal thread, hexagon nut and washer MU-IG, sizes M6 to M12.

The product description is given in Annex A.

**2 Specification of the intended use in accordance with the applicable European Assessment Document**

The performances given in Section 3 are only valid if the fastener is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the fastener of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

**3 Performance of the product and references to the methods used for its assessment****3.1 Mechanical resistance and stability (BWR 1)**

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	Alfa Wedge Anchor see Annex C1 to C4 Alfa Wedge Anchor-IG see Annex C11 to C12
Characteristic resistance to shear load (static and quasi-static loading)	Alfa Wedge Anchor see Annex C5 Alfa Wedge Anchor-IG see Annex C13
Displacements (static and quasi-static loading)	Alfa Wedge Anchor see Annex C9 to C10 Alfa Wedge Anchor-IG see Annex C15
Characteristic resistance and displacements for seismic performance categories C1 and C2	Alfa Wedge Anchor see Annex C6, C9 and C10
Durability	See Annex B1

**European Technical Assessment**

**ETA-19/0593**

English translation prepared by DIBt

Page 4 of 36 | 19 September 2019

**3.2 Safety in case of fire (BWR 2)**

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	Alfa Wedge Anchor see Annex C7 to C8 Alfa Wedge Anchor-IG see Annex C14

**4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

In accordance with the European Assessment Document EAD 330232-00-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

**5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD**

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

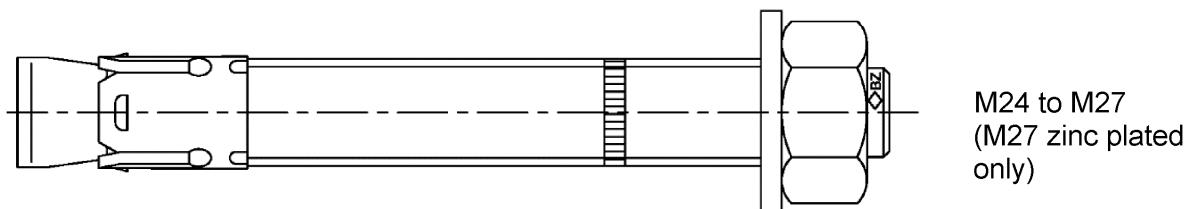

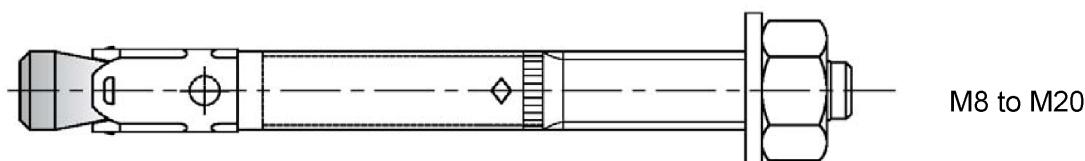

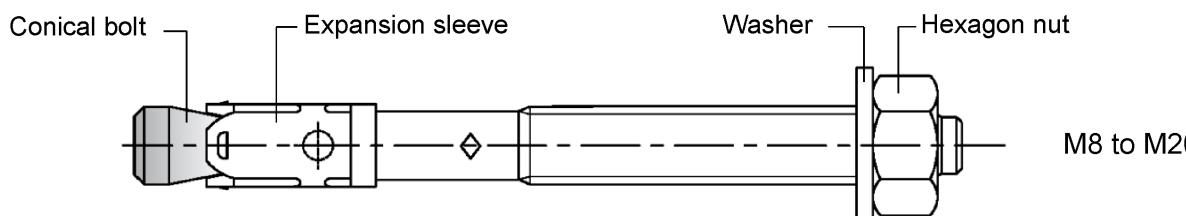

Issued in Berlin on 19. September 2019 by Deutsches Institut für Bautechnik

Fire exposure		✓		
Seismic action (C1 and C2)		-		

### Base materials:

- Compacted, reinforced or unreinforced normal weight concrete (without fibers) according to EN 206:2013
- Strength classes C20/25 to C50/60 according to EN 206:2013
- Cracked or uncracked concrete

### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (steel zinc plated, stainless steel or high corrosion resistant steel).
- Structures subject to external atmospheric exposure including industrial and marine environment or exposure to permanently damp internal condition, if no particular aggressive conditions exist (stainless steel or high corrosion resistant steel).
- Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions (high corrosion resistant steel)

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used.)

## Alfa Wedge Anchor and Alfa Wedge Anchor-IG

Intended use  
Specifications

Annex B1

## Specifications of intended use

### Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e.g. position of the fastener relative to reinforcement or to supports, etc.).
- Dimensioning of fasteners according to EN 1992-4: 2018 in conjunction with TR 055

### Installation:

- Fastener installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Hole drilling by hammer drill bit or vacuum drill bit
- Use of the fastener only as supplied by the manufacturer without exchanging the components of the fastener
- Optionally, the annular gap between fixture and stud of the Alfa Wedge Anchor can be filled to reduce the hole. For this purpose, the filling washer (3b) must be used in addition to the supplied washer (3a). For filling use high-strength mortar with compressive strength  $\geq 40 \text{ N/mm}^2$  (e.g. 292 Alfa Injection mortar)
- In case of aborted hole: new drilling at a minimum distance away of twice the depth of the aborted hole or smaller distance if the aborted drill hole is filled with high strength mortar and if under shear or oblique tension load it is not in the direction of load application

Minimum spacing	$s_{min,fi}$ [mm]		See normal ambient temperature		
Minimum edge distance	$c_{min,fi}$ [mm]			≥ 300 mm	

Intermediate values by linear interpolation.

## Installation instructions Alfa Wedge Anchor

1		Drill hole perpendicular to concrete surface. If using a vacuum drill bit, proceed with step 3.
2		Blow out dust. Alternatively vacuum clean down to the bottom of the hole.
3		Check position of nut.
4		Drive in fastener, such that $h_{ef}$ or $h_{ef,red}$ depth is met. This compliance is ensured, if the thickness of fixture is not greater than the maximum thickness of fixture marked on the fastener in accordance with Annex A3.
5		Installation torque $T_{inst}$ shall be applied by using calibrated torque wrench.

### Installation instructions Alfa Wedge Anchor with filling of annular gap

1		Drill hole perpendicular to concrete surface. If using a vacuum drill bit, proceed with step 3a.
2		Blow out dust. Alternatively vacuum clean down to the bottom of the hole.
3a		Check position of nut.
3b		Fit the filling washer to the fastener. The thickness of the filling washer must be taken into account with $t_{fix}$ .
4		Drive in fastener with filling washer, such that $h_{ef}$ or $h_{ef,red}$ depth is met. This compliance is ensured, if the thickness of fixture is 5mm (or 6mm when $\geq M24$ ) smaller than the maximum thickness of fixture marked on the fastener in accordance with Annex A3.
5		Installation torque $T_{inst}$ shall be applied by using calibrated torque wrench.
6		Fill the annular gap between stud and fixture with mortar (compressive strength $\geq 40 \text{ N/mm}^2$ e.g. 292 Alfa Injection mortar). Use enclosed reducing adapter. Observe the processing information of the mortar! The annular gap is completely filled, when excess mortar seeps out.

**Table B4: Installation parameters Alfa Wedge Anchor-IG**

Fastener size		M6	M8	M10	M12
Effective anchorage depth	$h_{ef}$ [mm]	45	58	65	80
Drill hole diameter	$d_0$ [mm]	8	10	12	16
Cutting diameter of drill bit	$d_{cut} \leq$ [mm]	8,45	10,45	12,5	16,5
Depth of drill hole	$h_1 \geq$ [mm]	60	75	90	105
Screwing depth of threaded rod	$L_{sd}^{2)} \geq$ [mm]	9	12	15	18
Installation torque, steel zinc plated	S [Nm]	10	30	30	55
	SK [Nm]	10	25	40	50
	B [Nm]	8	25	30	45
Installation torque, stainless steel A4, HCR	S [Nm]	15	40	50	100
	SK [Nm]	12	25	45	60
	B [Nm]	8	25	40	80
<b>Pre-setting installation</b>					
Diameter of clearance hole in the fixture	$d_f \leq$ [mm]	7	9	12	14
	S [mm]	1	1	1	1
Minimum thickness of fixture	$t_{fix} \geq$ SK [mm]	5	7	8	9
	B [mm]	1	1	1	1
<b>Through-setting installation</b>					
Diameter of clearance hole in the fixture	$d_f \leq$ [mm]	9	12	14	18
	S [mm]	5	7	8	9
Minimum thickness of fixture <sup>1)</sup>	$t_{fix} \geq$ SK [mm]	9	12	14	16
	B [mm]	5	7	8	9

<sup>1)</sup> The minimum thickness of fixture can be reduced to the value of Pre-setting installation, if the shear load at steel failure is designed with lever arm.

If pull-out is not decisive,  $N_{Rk,p}$  must be replaced by  $N_{Rk,c}^0$  in equation (D.4) and (D.5), EN 1992-4:2018.

### Alfa Wedge Anchor

#### Performance

Characteristic values for tension and shear load under fire exposure, Alfa Wedge Anchor, standard anchorage depth, cracked and uncracked concrete C20/25 to C50/60

#### Annex C7

**Table C8:** Characteristic values for tension and shear load under fire exposure,  
Alfa Wedge Anchor, reduced anchorage depth,  
cracked and uncracked concrete C20/25 to C50/60

Fastener size			M8	M10	M12	M16		
<b>Tension load</b>								
<b>Steel failure</b>								
<b>Steel, zinc plated</b>								
Characteristic resistance	R30	$N_{Rk,s,fi}$	[kN]	1,5	2,6	4,1	7,7	
	R60			1,1	1,9	3,0	5,6	
	R90			0,8	1,3	1,9	3,5	
	R120			0,6	1,0	1,3	2,5	
<b>Stainless steel A4, HCR</b>								
Characteristic resistance	R30	$N_{Rk,s,fi}$	[kN]	3,2	6,9	12,7	23,7	
	R60			2,5	5,3	9,4	17,6	
	R90			1,9	3,6	6,1	11,5	
	R120			1,6	2,8	4,5	8,4	
<b>Shear load</b>								
<b>Steel failure without lever arm</b>								
<b>Steel, zinc plated</b>								
Characteristic resistance	R30	$V_{Rk,s,fi}$	[kN]	1,5	2,6	4,1	7,7	
	R60			1,1	1,9	3,0	5,6	
	R90			0,8	1,3	1,9	3,5	
	R120			0,6	1,0	1,3	2,5	
<b>Stainless steel A4, HCR</b>								
Characteristic resistance	R30	$V_{Rk,s,fi}$	[kN]	3,2	6,9	12,7	23,7	
	R60			2,5	5,3	9,4	17,6	
	R90			1,9	3,6	6,1	11,5	
	R120			1,6	2,8	4,5	8,4	
<b>Steel failure with lever arm</b>								
<b>Steel, zinc plated</b>								
Characteristic resistance	R30	$M_{Rk,s,fi}^0$	[Nm]	1,5	3,3	6,4	16,3	
	R60			1,2	2,5	4,7	11,9	
	R90			0,8	1,7	3,0	7,5	
	R120			0,6	1,2	2,1	5,3	
<b>Stainless steel A4, HCR</b>								
Characteristic resistance	R30	$M_{Rk,s,fi}^0$	[Nm]	3,2	8,9	19,7	50,1	
	R60			2,6	6,8	14,6	37,2	
	R90			2,0	4,7	9,5	24,2	
	R120			1,6	3,6	7,0	17,8	

If pull-out is not decisive,  $N_{Rk,p}$  must be replaced by  $N_{Rk,c}^0$  in equation (D.4) and (D.5), EN 1992-4:2018.

### Alfa Wedge Anchor

#### Performance

Characteristic values for tension and shear load under fire exposure, Alfa Wedge Anchor, reduced anchorage depth, cracked and uncracked concrete C20/25 to C50/60

#### Annex C8

**Table C9: Displacements under tension load, Alfa Wedge Anchor**

Fastener size		M8	M10	M12	M16	M20	M24	M27	
<b>Standard anchorage depth</b>									
<b>Steel zinc plated</b>									
Tension load in cracked concrete	N	[kN]	2,4	4,3	7,6	11,9	17,1	21,1
