# **Specific Part**

# 1 Technical description of the product

The fischer Bolt Anchor FAZ II is an anchor made of galvanised steel (FAZ II) or made of stainless steel (FAZ II R) or high corrosion resistant steel (FAZ II HCR) which is placed into a drilled hole and anchored by torque-controlled expansion.

The product description is given in Annex A.

# 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the fastener is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the fastener of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

# 3 Performance of the product and references to the methods used for its assessment

# 3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex
(Static and quasi-static loading)	B 3, C 1
Characteristic resistance to shear load	See Annex
(static and quasi-static loading)	C 2
Displacements	See Annex
(static and quasi-static loading)	C 5
Characteristic resistance and displacements for seismic	See Annex
performance categories C1 and C2	C 4
Durability	See Annex B 1

#### 3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C 3

# 4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330232-00-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

# **European Technical Assessment ETA-05/0069**

Page 4 of 19 | 24 April 2020

English translation prepared by DIBt

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

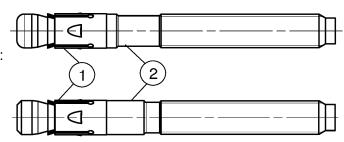

Issued in Berlin on 24 April 2020 by Deutsches Institut für Bautechnik

English translation prepared by DIBt

#### Specifications of intended use Anchorages subject to: FAZ II, FAZ II R, FAZ II HCR Size **M6 M8** M20 M24 M10 M12 M16 Static and quasi-static loads Cracked and uncracked concrete Fire exposure C1 Seismic performance C21) category

#### Base materials:

- Compacted reinforced and unreinforced normal weight concrete without fibres (cracked and uncracked) according to EN 206-1:2013+A1:2016
- Strength classes C20/25 to C50/60 according to EN 206-1:2013+A1:2016

# **Use conditions (Environmental conditions):**

- Structures subject to dry internal conditions (FAZ II, FAZ II R, FAZ II HCR)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist (FAZ II R, FAZ II HCR)
- Structures subject to external atmospheric exposure and permanently damp internal condition, if other particular aggressive conditions exist (FAZ II HCR)

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where deicing materials are used)

# Design:

- Anchorages are to be designed under the responsibility of an engineer experienced in anchorages and concrete work
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The
  position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or
  to supports, etc.)
- Design of fastenings according to EN 1992-4:2018 and EOTA Technical Report TR 055
- For effective embedment depth h<sub>ef</sub> < 40 mm only statically indeterminate fixings (e.g. light-weight suspended ceilings with internal exposure) are covered by the ETA

<sup>1)</sup> h<sub>1</sub> according to Annex B2

Splitting failure applied for minimum edge distance and spacing in dependence of the hef

For the calculation of minimum spacing and minimum edge distance of anchors in combination with different embedment depths and thicknesses of concrete members the following equation shall be fulfilled:

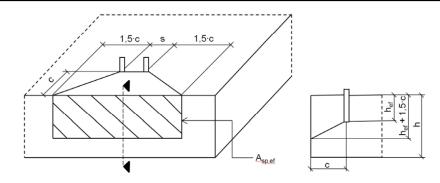

$$A_{sp,req} < A_{sp,ef}$$

 $A_{sp,req}$  = required splitting area  $A_{sp,ef}$  = effective splitting area (according to Annex B4)

fischer Bolt Anchor FAZ II, FAZ II R, FAZ II HCR	
Intended Use Minimum thickness of member, minimum spacing and edge distance	Annex B 3

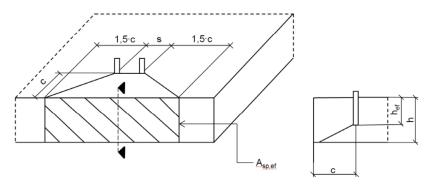

**Table B4.1**: Effective splitting area  $A_{sp,ef}$  with member thickness  $h > h_{ef} + 1,5 \cdot c$  and  $h \ge h_{min}$ 

Single anchor and   group of anchors with s > 3 · c	$A_{\text{sp,ef}} = (6 \cdot c) \cdot (h_{\text{ef}} + 1.5 \cdot c)$	[mm²]	with c ≥ c <sub>min</sub>
Group of anchors with s ≤ 3 · c	$A_{sp,ef} = (3 \cdot c + s) \cdot (h_{ef} + 1,5 \cdot c)$	[mm²]	with c ≥ c <sub>min</sub> and s ≥ s <sub>min</sub>

**Table B4.2**: Effective splitting area  $A_{sp,ef}$  with member thickness  $h \le h_{ef} + 1,5 \cdot c$  and  $h \ge h_{min}$ 

Single anchor and group of anchors with $s > 3 \cdot c$	$A_{sp,ef} = 6 \cdot c \cdot existing h$	[mm²]	with c ≥ c <sub>min</sub>
Group of anchors with s ≤ 3 · c	$A_{sp,ef} = (3 \cdot c + s) \cdot existing h$	[mm²]	with $c \ge c_{min}$ and $s \ge s_{min}$

Edge distance and axial spacing shall be rounded to at least 5 mm

(Fig. not to scale)

fischer Bolt Anchor FAZ II, FAZ II R, FAZ II HCR	
Intended Use Minimum thickness of member, minimum spacings and edge distances	Annex B 4

# Installation instructions:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Use of the anchor only as supplied by the manufacturer without exchanging the components of the anchor Exception: fischer FAZ II dome nut.
- Checking before placing the anchor to ensure that the strength class of the concrete in which the anchor is to be placed is in the range given and is not lower than that of the concrete to which the characteristic loads apply
- Check of concrete being well compacted, e.g. without significant voids
- Hammer, hollow or diamond drilling according to Annex B5
- Drill hole created perpendicular +/- 5° to concrete surface, positioning without damaging the reinforcement
- In case of aborted hole: new drilling at a minimum distance twice the depth of the aborted drill hole or smaller distance if the aborted drill hole is filled with high strength mortar and if under shear or oblique tension load it is not in the direction of load application
- · It must be ensured that in case of fire local spalling of the concrete cover does not occur
- · Fastenings in stand-off installation or with a grout layer under seismic action are not covered
- In case of seismic applications the fastener shall be positioned outside of critical regions (e.g. plastic hinges) of the concrete structure

# Installation instructions: Drilling and cleaning the hole

Types of drills and cleaning

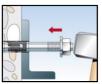

Hammer drill	\$400000000 <del></del>	1: Drill the hole	2: Clean the hole
Hollow drill	Ī	1: Drill the hole with automatic cleaning	-
Diamond drill, for non seismic applications only and ≥ drill Ø 8		1: Drill the hole	2: Clean the hole

fischer Bolt Anchor FAZ II, FAZ II R, FAZ II HCR	
Intended Use Installation instructions	Annex B 5

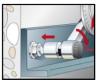

# Installation instructions: Installation of the anchor

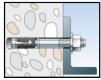

# **HEXAGON NUT:**

3: Set the fastener

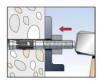

4: Apply Tinst

5: Installed fastener

# fischer FAZ II DOME NUT:

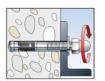

Option 1: Push through installation with setting gauge SL-H:

3: Set the fastener using setting gauge

4: Check offset

5: Turn on the washer and fischer FAZ II dome nut

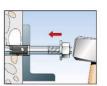

6: Apply Tinst

7: Installed fastener

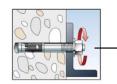

Option 2: Push through installation with hexagon nut:

3: Set the fastener

4: check setting position: Visible one turn of a thread

4.1: Remove nut

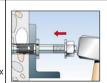

fischer FILLING DISC FFD optional for seismic C2 application or minimizing the annular gap:

Optional

The gap between bolt and fixture may be filled with mortar (compressive strength  $\geq$  50 N/mm<sup>2</sup> e.g. FIS SB) after step 7 (for eliminating the annular gap).

The filling disc is additional to the standard washer.

The thickness of the filling disc must be considered for definition of t<sub>fix</sub> Countersunk of the filling disc in direction to the anchor plate.
