The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Page 3 of 19 | 5 October 2020

Specific part

1 Technical description of the product

The KTS Facade Anchor in the range of KT 10 and KT 14 is a plastic anchor consisting of a plastic sleeve made of polyamide and an accompanying specific screw of galvanised steel or stainless steel.

The plastic sleeve is expanded by screwing in the specific screw which presses the sleeve against the wall of the drilled hole.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchors of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C 1

3.2 Safety and accessibility (BWR 4)

Essential characteristic	Performance
Characteristic resistance for tension and shear loads	See Annex C 1 - C 3, C 5
Edge distances and spacing	See Annex B 2 - B 4
Displacements	See Annex C 4 – C 5
Durability	See Annex B 1

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with guideline for European technical approval ETAG 020, March 2012 used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011 the applicable European legal act is: 97/463/EC.

The system to be applied is: 2+

European Technical Assessment ETA-08/0188 English translation prepared by DIBt

Page 4 of 19 | 5 October 2020

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 5 October 2020 by Deutsches Institut für Bautechnik

BD Dipl.-Ing. Andreas Kummerow Head of Department *beglaubigt:* Ziegler

2)

3) core diameter of the thread

Table A2: Materials

Name	Material
Anchor sleeve	Polyamide PA6, colour: red, grey
	Carbon steel, strength class 6.8, electrogalvanic coating Zn≥5µm according to EN ISO 4042:2018
Special screw	Stainless steel according to EN 10088-3:2014, material 1.4401, 1.4404 or 1.4571

Electronic copy of the ETA by DIBt: ETA-08/0188

KTS Facade Anchor KT 10 and KT 14

Product description Dimensions and materials Annex A 3

Specifications of intended use

Anchorages subject to:

- · Static and quasi-static loads
- · Multiple fixing of non-structural applications

Base materials:

- Reinforced or unreinforced normal weight concrete with strength classes ≥ C12/15 (use category a), according to EN 206-1:2000, Annex C 1
- · Solid brick masonry (use category b), according to Annex C 2
- Note: The characteristic resistance is also valid for larger brick sizes and larger compressive strength of the masonry unit.
- · Hollow brick masonry (use category c), according to Annex C 3
- · Autoclaved aerated concrete (use category d), according to Annex C 5
- · Mortar strength class of the masonry \geq M2,5 at minimum according to EN 998-2:2010.
- For other base materials of the use categories a, b, c and d the characteristic resistance of the anchor may be determined by job size tests according to ETAG 020, Annex B Edition March 2012.

Temperature Range:

Temperature range a):	-40°C to +40°C	(max. long term temperature +24°C and
		max. short term temperature +40°C)
 Temperature range b): 	-40°C bis +80°C	(max. long term temperature +50°C and
		max. short term temperature +80°C)

Use conditions (Environmental conditions):

- · Structures subject to dry internal conditions (zinc coated steel, stainless steel).
- The specific screw made of galvanized steel may also be used in structures subject to external atmospheric exposure, if the area of the head of the screw is protected against moisture and driving rain after mounting of the fixing unit in this way, that intrusion of moisture into the anchor shaft is prevented. Therefore there shall be an external cladding or a ventilated rainscreen mounted in front of the head of the screw and the head of the screw itself shall be coated with a soft plastic, permanently elastic bitumen-oil-combination coating (e. g. undercoating or body cavity protection for cars).
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist (stainless steel).
- Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

Design:

- The anchorages are designed in accordance with the ETAG 020, Annex C Edition March 2012 under the responsibility of an engineer experienced in anchorages and masonry work.
- Verifiable calculation notes and drawings shall be prepared taking account of the loads to be anchored, the nature and strength of the base materials and the dimensions of the anchorage members as well as of the relevant tolerances. The position of the anchor is indicated on the design drawings.
- Fasteners are only to be used for multiple use for non-structural application, according to ETAG 020 Edition March 2012.

Installation:

- · Hole drilling by the drill modes according to Annex C 1, C 2, C 3, C 5
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Installation temperature from ≥ -20°C
- · Exposure to UV due to solar radiation of the anchor not protected ≤ 6 weeks

KTS Facade Anchor KT 10 and KT 14

Intended use

Specifications

	Solid sar	nd-lime brick KS	2,57	1,1	2,2	2,1	3,2

¹⁾ Information for base material masonry: see Annex C 2, Table C4

KTS Facade Anchor KT 10 and KT 14

Performances

Displacements under tension and shear loading in concrete, solid and hollow or perforated masonry

Table C8: Characteristic resistance F _{Rk} in [kN] in autoclaved aerated concrete (use category "d")												
Туре	Base material	Bulk	Minimum	Drill	Characteristic resistance							
		density	compressive	method	F _{BK}							

			strength		[k	^{ik} N]
		ρ [kg/m³]	f _b [N/mm²]		24/40 °C	50/80 °C
	uncracked autoclaved aerated	≥ 350	1,8	R ²⁾	0,9	0,75
10	concrete (blocks) EN 771-4:2011	≥ 650	5,4	R ²⁾	2,5	2,5
	Partial safety factor ¹⁾		Үм,аас		2	,0

¹⁾ In absence of other national regulations

2) Rotary drilling

Table C9: Displacements under tension and shear loading autoclaved aerated concrete

Туре	Base material		Tension load			Shear load	
		F ¹⁾ [kN]	δ _{NO} [mm]	δ _{N∞} [mm]	F ¹⁾ [kN]	δ _{vo} [mm]	δ _{∨∞} [mm]
10	autoclaved aerated concrete $f_b \ge 1.8 \text{ N/mm}^2$	0,3	0,2	0,4	0,3	0,6	1,0
	autoclaved 0,9 aerated concrete $f_b \ge 5,4 \text{ N/mm}^2$		0,2	0,4	0,9	1,8	2,7

¹⁾ Intermediate values by linear interpolation

Performances

Characteristic resistance and displacements for use in autoclaved aerated concrete
