Approval body for construction products and types of construction

Bautechnisches Prüfamt

An institution established by the Federal and Laender Governments

Designated according to Article 29 of Regulation (EU) No 305/2011 and member of EOTA (European Organisation for Technical Assessment)

European Technical Assessment

ETA-09/0159 of 23 September 2020

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the European Technical Assessment:	Deutsches Institut für Bautechnik
Trade name of the construction product	BTI High-Performance Anchor BHA, BHA-I
Product family to which the construction product belongs	Mechanical fastener for use in concrete
Manufacturer	BTI Befestigungstechnik GmbH & Co. KG Salzstraße 51 74653 Ingelfingen DEUTSCHLAND
Manufacturing plant	BTI Herstellwerk 1
This European Technical Assessment contains	25 pages including 3 annexes which form an integral part of this assessment
This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of	EAD 330232-00-0601, Edition 10/2016
This version replaces	ETA-09/0159 issued on 4 September 2018

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The BTI High-Performance Anchor BHA, BHA-I is an anchor made of galvanised steel (sizes with external diameter 10, 12, 15, 18, 24, 28 and 32, sizes with internal thread 12/M6 I, 12/M8 I, 15/M10 I and 15/M12 I) or stainless steel (sizes with external diameter 10, 12, 15, 18 and 24, sizes with internal thread 12/M6 I, 12/M8 I, 15/M10 I and 15/M12 I) which is placed into a drilled hole and anchored by torque-controlled expansion.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the fastener is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the fastener of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex C 1, C 2, C 7
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 3 and C 4
Displacements (static and quasi-static loading)	See Annex C 10, C 11
Characteristic resistance and displacements for seismic performance categories C1 and C2	See Annex C 8, C 9, C 11
Durability	See Annex B 1

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C 5, C 6

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330232-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Issued in Berlin on 23 September 2020 by Deutsches Institut für Bautechnik

1) Anchor type not part of the assessment
2) No performance assessed

Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres (cracked and uncracked) of strength classes C20/25 to C50/60 according to EN 206:2013+A1:2016

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (BHA, BHA R, BHA-I, BHA-I R)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal conditions, if no particular aggressive conditions exist (BHA R, BHA-I R)

  Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where deicing materials are used)

Design:

- Anchorages are to be designed under the responsibility of an engineer experienced in anchorages and concrete work
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)
- Design of fastenings according to EN 1992-4:2018 and EOTA Technical Report TR 055, Edition February 2018

Installation instructions:

- Fastener installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Use of the fastener only as supplied by the manufacturer without exchanging the components of the fastener
- Checking before placing the fastener to ensure that the strength class of the concrete in which the fastener is to be placed is in the range given and is not lower than that of the concrete to which the characteristic loads apply
- Check of concrete being well compacted, e.g. without significant voids
- Hammer or hollow drilling according to Annex B5 and B6
- Drill hole created perpendicular +/- 5° to concrete surface, positioning without damaging the reinforcement
- In case of aborted hole: new drilling at a minimum distance twice the depth of the aborted drill hole or smaller distance if the aborted drill hole is filled with high strength mortar and if under shear or oblique tension load it is not in the direction of load application

Hollow drilling		Continue with step 2, 3, and 4			
Hammer drilling					
Step	**1**	**2**	**3**		**4**

Step	Description	
1	Create drill hole with hammer drill, clean drill hole	Create drill hole with hollow drill and vacuum cleaner
2	Hammering in the anchor flushed with the surface of the concrete	
3	Tighten the anchor. The included hexagon bit in the package should be used. Other tightening methods are allowed. Tighten the anchor in the concrete until the gap U is 3 - 5 mm or the required setting torque T_{inst} is reached. Only one of the above requirements has to be fulfilled.	
4	Attach the fixture and use a suitable screw or anchor rod. The length of the screw or anchor rod should be determined depending on the thickness of fixture t_{fix}, admissible tolerances, and available thread length $l_{s,max}$ and $l_{s,min}$ including the gap U. Tighten the screw with the torque ≤ max T_{fix} (max T_{fix} see table B3.1)

Table C10.1: Displacements under static and quasi static **tension loads** for BHA and BHA R

Anchor type BHA-S, -SK, -B, -H and BHA-S R, -SK R, -B R, -H R			**BHA 10**	**BHA 12**	**BHA 15**	**BHA 18**	**BHA 24**	**BHA 28**	**BHA 32**
Tension load cracked concrete	N	[kN]	3,6	5,7	7,6	11,9	17,1	24,0	31,5
Corresponding displacements	δ_{N0}	[mm]	1,0	1,0	1,0	1,0	1,0	0,7	0,7
	$\delta_{N\infty}$		1,7	1,6	1,6	1,6	1,8	1,3	1,1
Tension load uncracked concrete	N	[kN]	6,0	11,2	14,1	17,2	24,0	33,6	44,2
Corresponding displacements	δ_{N0}	[mm]	0,6	1,0	1,0	1,0	1,0	0,3	0,3
	$\delta_{N\infty}$		1,7	1,6	1,6	1,6	1,8	1,3	1,1

Table C10.2: Displacements under static and quasi static **tension loads** for BHA-I and BHA-I R

Anchor type BHA-I and BHA-I R			**BHA 12/M6 I BHA 12/M8 I**	**BHA 15/M10 I BHA 15/M12 I**
Tension load cracked concrete	N	[kN]	4,3	5,7
Tension load uncracked concrete			9,5	14,1
Corresponding displacements	δ_{N0}	[mm]	1,7	1,9
	$\delta_{N\infty}$		2,2	2,9

Table C10.3: Displacements under static and quasi static **shear loads** for BHA-S and BHA-SK

Anchor type BHA-S and BHA-SK			**BHA 10**	**BHA 12**	**BHA 15**	**BHA 18**	**BHA 24**	**BHA 28**	**BHA 32**
Shear load in cracked and uncracked concrete	V	[kN]	10,3	18,9	33,7	43,4	83,4	99,4	124,0
Corresponding displacements	δ_{V0}	[mm]	2,4	2,7	4,4	5,0	7,0	6,0	8,0
	$\delta_{V\infty}$		3,6	4,1	6,6	7,5	10,5	9,0	12,0

Table C10.4: Displacements under static and quasi static **shear loads** for BHA-B and BHA-H

Anchor type BHA-B and BHA-H			**BHA 10**	**BHA 12**	**BHA 15**	**BHA 18**	**BHA 24**	**BHA 28**	**BHA 32**
Shear load in cracked and uncracked concrete	V	[kN]	8,9	15,4	23,4	35,4	68,0	83,4	96,6
Corresponding displacements	δ_{V0}	[mm]	2,2	2,3	3,0	5,0	7,0	5,0	5,0
	$\delta_{V\infty}$		3,3	3,5	4,5	7,5	10,5	7,5	7,5

BTI High-Performance Anchor BHA, BHA-I

Performances
Displacements under tension and shear loads

Annex C 10

Deutsches Institut für Bautechnik DIBt

Table C11.1: Displacements under static and quasi static **shear loads** for BHA-S R, BHA-SK R, BHA-B R and BHA-H R

Anchor type BHA-S R, -SK R, -B R, -H R			**BHA 10**	**BHA 12**	**BHA 15**	**BHA 18**	**BHA 24**
Shear load in cracked and uncracked concrete	V	[kN]	10,3	16,0	24,6	37,7	68,0
Corresponding displacements	δ_{V0}	[mm]	3,5	3,5	3,7	5,7	9,0
	$\delta_{V\infty}$		5,3	5,3	5,6	8,6	13,5

Table C11.2: Displacements under static and quasi static **shear loads** for BHA-I and BHA-I R

Anchor type: BHA-I and BHA-I R			**BHA 12/M6 I**	**BHA 12/M8 I**	**BHA 15/M10 I**	**BHA 15/M12 I**
Shear load in cracked and uncracked concrete	V	[kN]	4,6	8,3	13,3	13,7
Corresponding displacements	δ_{V0}	[mm]	2,6	2,6	2,2	2,2
	$\delta_{V\infty}$		3,9	3,9	3,3	3,3

Table C11.3: Displacements under **tension loads** for **seismic performance category C2** for BHA and BHA R

Anchor type BHA-S, -SK, -B, -H and BHA-S R, -SK R, -B R, -H R			**BHA 12**	**BHA 15**	**BHA 18**	**BHA 24**	**BHA 28**	**BHA 32**
Displacement DLS	$\delta_{N,C2\ (DLS)}$	[mm]	1,55	2,63	2,04	4,26	3,06	
Displacement ULS	$\delta_{N,C2\ (ULS)}$		8,71	11,07	7,30	11,70	11,44	

Table C11.4: Displacements under **shear loads** for **seismic performance category C2** for BHA and BHA R

Anchor type BHA-S, -SK and BHA-S R, -SK R			**BHA 12**	**BHA 15**	**BHA 18**	**BHA 24**	**BHA 28**	**BHA 32**
Displacement DLS	$\delta_{V,C2\ (DLS)}$	[mm]	3,53	4,18	4,67	5,59	4,79	
Displacement ULS	$\delta_{V,C2\ (ULS)}$		6,62	7,38	9,03	14,09	9,95	

Anchor type BHA-B, -H and BHA-B R, -H R			**BHA 12**	**BHA 15**	**BHA 18**	**BHA 24**	**BHA 28**	**BHA 32**
Displacement DLS	$\delta_{V,C2\ (DLS)}$	[mm]	3,42	4,26	4,29	4,79		
Displacement ULS	$\delta_{V,C2\ (ULS)}$		5,26	6,66	7,95	7,69	9,95
