Approval body for construction products and types of construction

Bautechnisches Prüfamt

An institution established by the Federal and Laender Governments

Designated according to Article 29 of Regulation (EU) No 305/2011 and member of EOTA (European Organisation for Technical Assessment)

European Technical Assessment ETA-20/0697 of 30 November 2020

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the European Technical Assessment:	Deutsches Institut für Bautechnik
Trade name of the construction product	Connector HCC-U with Hilti injection mortar HIT-HY 200-R V3 and HIT-RE 500 V3 and HIT-HY 170
Product family to which the construction product belongs	Connector for Strengthening of existing concrete structures by concrete overlay
Manufacturer	Hilti Aktiengesellschaft Feldkircherstrasse 100 9494 SCHAAN FÜRSTENTUM LIECHTENSTEIN
Manufacturing plant	Hilti Werke
This European Technical Assessment contains	23 pages including 3 annexes which form an integral part of this assessment
This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of	EAD 332347-00-0601, Edition 12/2019

Deutsches Institut für Bautechnik
Kolonnenstraße 30 B | 10829 Berlin | GERMANY | Phone: +49 30 78730-0 | Fax: +49 30 78730-320 | Email: dibt@dibt.de | www.dibt.de

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The Connector Hilti HCC-U is a headed fastener (threaded rod with nut) made of steel anchored with the Injectionmortar Hilti HIT-HY 200-R V3 or Hilti HIT-RE 500 V3 or Hilti HIT-HY 170 into a predrilled cylindrical drill hole in existing concrete. The Hilti HCC-U is connecting two layers of concrete cast at different times (existing concrete and concrete overlay). The side with the anchor head of Hilti HCC-U is finally embedded in the concrete overlay.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Existing concrete: - resistances - edge distance and spacing	 See Annex C 1 to C 4 See Annex B 2
Concrete overlay: - resistances - edge distance and spacing	 See Annex C 5 See Annex B 2
Shear interface parameter under static and quasi-static and fatigue cyclic loading - material and geometric parameters - factor for fatigue cyclic loading	 See Annex C 5 No performance assessed

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with European Assessment Document EAD No. 332347-00-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Issued in Berlin on 30 November 2020 by Deutsches Institut für Bautechnik

Specifications of intended use

Anchorages subject to:

- static or quasi static actions
  - surface roughness “very smooth” to “very rough” of the shear interface according to EOTA Technical Report TR 066:2019-10

Base materials:

Connector for use to strengthen existing concrete by concrete overlay. Both concrete layers are made of compacted reinforced or unreinforced normal weight concrete without fibres with strength classes in the range C20/25 to C50/60 all in accordance with EN 206:2013+A1:2016; cracked and uncracked concrete; dry or wet concrete condition in existing concrete

Temperature in the base material (existing concrete):

For use with **HIT-HY 200-R V3**

- at installation: -10 °C to +40 °C — for the standard variation of temperatures after installation (i.e. -10 °C to +24 °C in ≥ 12 hours)
- in-service:
  - Temperature range I: -40 °C to +40 °C (max. long term temperature +24 °C and max. short term temperature +40 °C)
  - Temperature range II: -40 °C to +80 °C (max. long term temperature +50 °C and max. short term temperature +80 °C)
  - Temperature range III: -40 °C to +120 °C (max. long term temperature +72 °C and max. short term temperature +120 °C)

For use with **HIT-RE 500 V3**

- at installation: -5 °C to +40 °C — for the standard variation of temperatures after installation (i.e. -10 °C to +24 °C in ≥ 12 hours)
- in-service:
  - Temperature range I: -40 °C to +40 °C (max. long term temperature +24 °C and max. short term temperature +40 °C)
  - Temperature range II: -40 °C to +70 °C (max. long term temperature +43 °C and max. short term temperature +70 °C)

For use with **HIT-HY 170**

- at installation:
  - 0 °C to +40 °C
- in-service:
  - Temperature range I: -40 °C to +40 °C (max. long term temperature +24 °C and max. short term temperature +40 °C)
  - Temperature range II: -40 °C to +80 °C (max. long term temperature +50 °C and max. short term temperature +80 °C)

Design:

- The design of an anchorage and the specification of the fastener is under the control of an engineer experienced in anchorages and concrete work
- Post-installed shear connections are designed in accordance with EOTA Technical Report TR 066:2018-11
- For the concrete overlay following requirements on the mixture apply:
  - Concrete compressive strength of the new concrete shall be higher than the concrete compressive strength of the existing concrete
  - Use of concrete with low shrinkage is recommended
  - Slump of fresh concrete f ≥ 380 mm, a slump value f ≥ 450 mm is recommended, if applicable

Connector Hilti HCC-U	**Annex B1**
Intended Use Specifications	

Deutsches Institut für Bautechnik DIBt

Installation:

- The fastener installation is executed by trained personnel, ensuring that the Installation instruction and the specifications by the engineer are observed
- Installation direction in existing concrete is downward and horizontal and upwards (e.g. overhead) installation (D3)
- The requirements for construction works given in EOTA Technical Report TR 066:2018-11 have to be considered.

Table B1: Installation parameters of connector Hilti HCC-U in existing concrete

Connector Hilti HCC-U			**M8**	**M10**	**M12**	**M16**	**M20**	**M24**	**M27**	**M30**

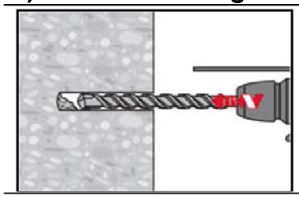
Installation instruction

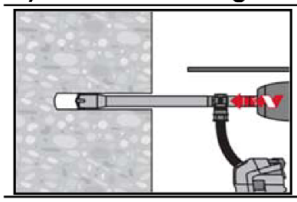
Hole drilling

a) Hammer drilling



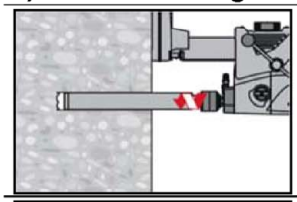
Drill hole to the required embedment depth with a hammer drill set in rotation-hammer mode using an appropriately sized carbide drill bit.

b) Hammer drilling with Hilti hollow drill bit

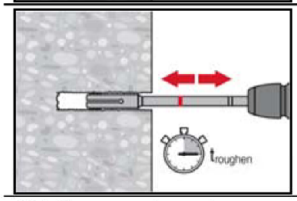


Drill hole to the required embedment depth with an appropriately sized Hilti TE-CD or TE-YD hollow drill bit attached to Hilti vacuum cleaner VC 20/40 (-Y) (suction volume ≥ 57 l/s) with automatic cleaning of the filter activated. This drilling system removes the dust and cleans the drill hole during drilling when used in accordance with the user's manual. When using TE-CD size 12 and 14 refer to Table B7. After drilling is completed, proceed to the "injection preparation" step in the installation instruction.

c) Diamond coring with roughening with Hilti roughening tool TE-YRT:

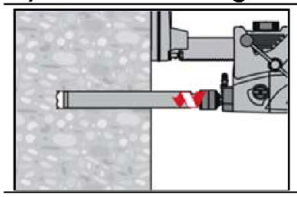


Diamond coring is permissible when suitable diamond core drilling machines and the corresponding core bits are used.
For the use in combination with Hilti roughening tool TE-YRT see parameters in Table B7, Table B8 and Table B9.



Before roughening water needs to be removed from the drill hole.
Check usability of the roughening tool with the wear gauge RTG.
Roughen the drill hole over the whole length to the required h_{ef}.

d) Diamond coring:



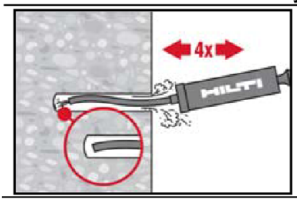
Diamond coring is permissible when suitable diamond core drilling machines and the corresponding core bits are used.

Drill hole cleaning

Just before setting an anchor, the drill hole must be free of dust and debris.
Inadequate hole cleaning = poor load values.

Manual Cleaning (MC)

Uncracked concrete only. For drill hole diameters $d_0 \leq 20$ mm and drill hole depths $h_0 \leq 10 \cdot d$.



The Hilti hand pump may be used for blowing out drill holes up to diameters $d_0 \leq 20$ mm and drill hole depths $h_0 \leq 10 \cdot d$.
Blow out at least 4 times from the back of the drill hole until return air stream is free of noticeable dust.

Connector Hilti HCC-U	Annex B7
Intended Use Installation instructions	

Deutsches Institut für Bautechnik DIBt

	Brush 4 times with the specified brush (see Table B7) by inserting the steel brush Hilti HIT-RB to the back of the hole (if needed with extension) in a twisting motion and removing it. The brush must produce natural resistance as it enters the drill hole (brush Ø ≥ drill hole Ø) - if not the brush is too small and must be replaced with the proper brush diameter.
	Blow out again with the Hilti hand pump at least 4 times until return air stream is free of noticeable dust.
Compressed air cleaning (CAC) for all drill hole diameters d_0 and all drill hole depths h_0	
	Blow 2 times from the back of the hole (if needed with nozzle extension) over the hole length with oil-free compressed air (min. 6 bar at 6 m³/h) until return air stream is free of noticeable dust. For drill hole diameters ≥ 32 mm the compressor has to supply a minimum air flow of 140 m³/h.
	Brush 2 times with the specified brush (see Table B7) by inserting the steel brush Hilti HIT-RB to the back of the hole (if needed with extension) in a twisting motion and removing it. The brush must produce natural resistance as it enters the drill hole (brush Ø ≥ drill hole Ø) - if not the brush is too small and must be replaced with the proper brush diameter.
	Blow again with compressed air 2 times until return air stream is free of noticeable dust.
Cleaning of diamond cored holes with roughening with Hilti roughening tool TE-YRT.	
	Flush 2 times by inserting a water hose (water-line pressure) to the back of the hole until water runs clear.
	Brush 2 times with the specified brush (see Table B7) by inserting the steel brush Hilti HIT-RB to the back of the hole (if needed with extension) in a twisting motion and removing it. The brush must produce natural resistance as it enters the drill hole (brush Ø ≥ drill hole Ø) - if not the brush is too small and must be replaced with the proper brush diameter.

Connector Hilti HCC-U	**Annex B8**
Intended Use Installation instructions	

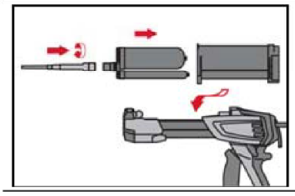
Deutsches Institut für Bautechnik DIBt

	Blow 2 times from the back of the hole (if needed with nozzle extension) over the whole length with oil-free compressed air (min. 6 bar at 6 m³/h) until return air stream is free of noticeable dust and water. Remove all water from the drill hole until drill hole is completely dried before mortar injection. For drill hole diameters ≥ 32 mm the compressor has to supply a minimum air flow of 140 m³/h.
Cleaning of hammer drilled water-filled drill holes and diamond cored holes: For all drill hole diameters d_0 and all drill hole depths h_0.	
	Flush 2 times by inserting a water hose (water-line pressure) to the back of the hole until water runs clear.
	Brush 2 times with the specified brush (see Table B7) by inserting the steel brush Hilti HIT-RB to the back of the hole (if needed with extension) in a twisting motion and removing it. The brush must produce natural resistance as it enters the drill hole (brush Ø ≥ drill hole Ø) - if not the brush is too small and must be replaced with the proper brush diameter.
	Flush 2 times by inserting a water hose (water-line pressure) to the back of the hole until water runs clear.
	Blow 2 times from the back of the hole (if needed with nozzle extension) over the whole length with oil-free compressed air (min. 6 bar at 6 m³/h) until return air stream is free of noticeable dust and water. For drill hole diameters ≥ 32 mm the compressor has to supply a minimum air flow of 140 m³/h.
	Brush 2 times with the specified brush size (brush Ø ≥ drill hole Ø, see Table B7 by inserting the steel brush Hilti HIT-RB to the back of the hole (if needed with extension) in a twisting motion and removing it. The brush must produce natural resistance as it enters the drill hole – if not the brush is too small and must be replaced with the proper brush diameter.
	Blow again with compressed air 2 times until return air stream is free of noticeable dust and water.

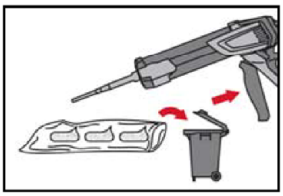
Connector Hilti HCC-U	
Intended Use Installation instructions	**Annex B9**

Deutsches Institut für Bautechnik DIBt

Injection preparation



Tightly attach Hilti mixing nozzle HIT-RE-M to foil pack manifold. Do not modify the mixing nozzle.
Observe the instruction for use of the dispenser.
Check foil pack holder for proper function. Insert foil pack into foil pack holder and put holder into dispenser.



The foil pack opens automatically as dispensing is initiated. Depending on the size of the foil pack, an initial amount of adhesive has to be discarded. Discarded quantities are

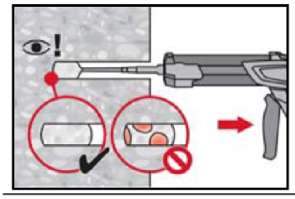
- for use with HIT-HY 200-R V3:
  - 2 strokes for 330 ml foil pack,
  - 3 strokes for 500 ml foil pack,
  - 4 strokes for 500 ml foil pack ≤ 5 °C.

  The minimum foil pack temperature is 0° C.
- for use with HIT-RE 500 V3:
  - 3 strokes for 330 ml foil pack,
  - 4 strokes for 500 ml foil pack,
  - 65 ml for 1400 ml foil pack

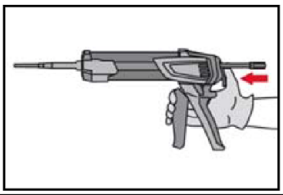
  The minimum foil pack temperature is +5° C.
- for use with HIT-HY 170:
  - 2 strokes for 330 ml foil pack,
  - 3 strokes for 500 ml foil pack,

  The minimum foil pack temperature is 0° C.

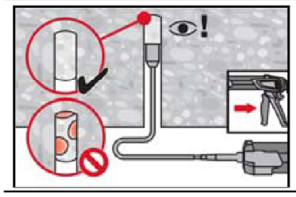
Inject adhesive from the back of the drill hole without forming air voids.



Inject the adhesive starting at the back of the hole, slowly withdrawing the mixer with each trigger pull.
Fill approximately 2/3 of the drill hole to ensure that the annular gap between the anchor and the concrete is completely filled with adhesive along the embedment length.
In water saturated concrete it is required to set the fastener immediately after cleaning the drill hole.

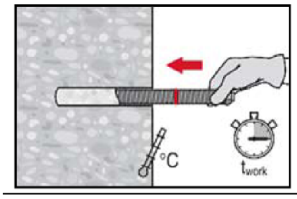


After injection is completed, depressurize the dispenser by pressing the release trigger. This will prevent further adhesive discharge from the mixer.



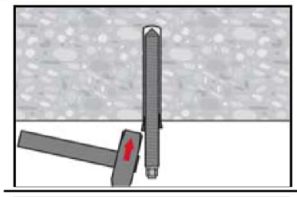
Overhead installation and/or installation with embedment depth h_{ef} > 250mm.
For overhead installation the injection is only possible with the aid of extensions and piston plugs. Assemble HIT-RE-M mixer, extension(s) and appropriately sized piston plug (see Table B7). Insert piston plug to back of the hole and inject adhesive. During injection the piston plug will be naturally extruded out of the drill hole by the adhesive pressure.

Setting the element

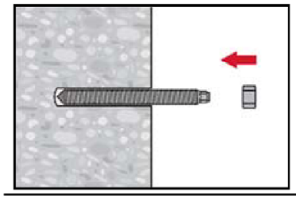


Before use, verify that the element is dry and free of oil and other contaminants.
Mark and set element to the required embedment depth before working time t_{work} has elapsed. The working time t_{work} is given in Table B4, Table B5 and Table B6.

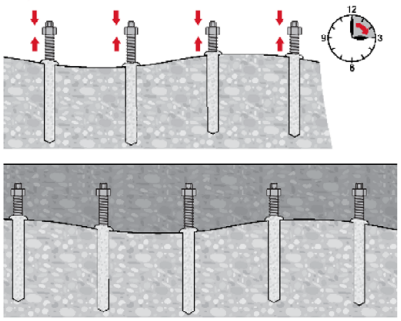
Connector Hilti HCC-U	Annex B10
Intended Use Installation instructions	



For overhead installation use piston plugs and fix embedded parts with e.g. wedges (Hilti HIT-OHW).



Assembly of the nut.



Levelling of the nut to ensure the required embedment depth.

Observe the curing time t_{cure}, which varies according to temperature of base material (see Table B4, Table B5 and Table B6). After t_{cure} has elapsed the concrete overlay can be concreted.

Observe the required condition of the surface before concreting and the use of the correct concrete composition.
For requirements on concrete composition see EOTA TR 066:2018-11.
