Laender Governments

## European Technical Assessment

**ETA-20/0731**  
**of 13 November 2020**

English translation prepared by DIBt - Original version in German language

### General Part

Technical Assessment Body issuing the  
European Technical Assessment:

Deutsches Institut für Bautechnik

Trade name of the construction product

AnkaScrew Xtrem

Product family  
to which the construction product belongs

Mechanical fasteners for use in concrete

Manufacturer

Ramset Reid  
1 Ramset Drive  
CHIRNSIDE PARK, VIC 3116  
AUSTRALIEN

Manufacturing plant

Plant 1

This European Technical Assessment  
contains

22 pages including 3 annexes which form an integral part  
of this assessment

This European Technical Assessment is  
issued in accordance with Regulation (EU)  
No 305/2011, on the basis of

EAD 330232-00-0601, Edition 10/2016

**European Technical Assessment**

**ETA-20/0731**

English translation prepared by DIBt

**Page 2 of 22 | 13 November 2020**

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

**Specific Part****1 Technical description of the product**

The concrete screw AnkaScrew Xtrem respectively SPIT TAPCON XTREM is an anchor in size 6, 8, 10, 12 and 14 mm made of galvanised steel respectively steel with zinc flake coating, made of stainless or high corrosion resistant steel. The anchor is screwed into a predrilled cylindrical drill hole. The special thread of the anchor cuts an internal thread into the member while setting. The anchorage is characterised by mechanical interlock in the special thread. Product and product description are given in Annex A.

**2 Specification of the intended use in accordance with the applicable European Assessment Document**

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

**3 Performance of the product and references to the methods used for its assessment****3.1 Mechanical resistance and stability (BWR 1)**

| Essential characteristic   | Performance                      |
|--|----------------------------------|
| Characteristic resistance to tension load (static and quasi-static loading)              | See Annex B 4, Annex C 1 and C 2 |
| Characteristic resistance to shear load (static and quasi-static loading)                | See Annex C 1 and C 2            |
| Displacements and Durability   | See Annex C 7 and Annex B 1      |
| Characteristic resistance and displacements for seismic performance categories C1 and C2 | See Annex C 3, C 4, C 5 and C 8  |

**3.2 Safety in case of fire (BWR 2)**

| Essential characteristic | Performance   |
|--------------------------|---------------|
| Reaction to fire         | Class A1      |
| Resistance to fire       | See Annex C 6 |

**4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

In accordance with European Assessment Document EAD No. 330232-00-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

**5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document**

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 13 November 2020 by Deutsches Institut für Bautechnik

### Base materials:

- Compacted reinforced and compacted unreinforced concrete without fibers according to EN 206:2013.
- Strength classes C20/25 to C50/60 according to EN 206:2013.
- Cracked and uncracked concrete.

### Use conditions (Environmental conditions):

- Concrete screws subject to dry internal conditions: all screw types.
- Structural subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition no particular aggressive conditions exists: screw types made of stainless steel with marking A4.
- Structural subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition if particular aggressive conditions exists: screw types made of stainless steel with marking HCR.

Note: Such particular aggressive conditions are e.g. permanent, alternating immersion in seawater or splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

Ramset™ AnkaScrew™ Xtrem™

Intended use  
Specification

Annex B1

## Specification of Intended use - continuation

### Design:

- Anchorages are to be designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages are designed according to EN 1992-4:2018 and EOTA Technical Report TR 055. The design for shear load according to EN 1992-4:2018, Section 6.2.2 applies for all specified diameters  $d_f$  of clearance hole in the fixture in Annex B3, Table 4.

### Installation:

- Hammer drilling or hollow drilling; hollow drilling only for sizes 8-14.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters on site.
- In case of aborted hole: new drilling must be drilled at a minimum distance of twice the depth of aborted hole or closer, if the aborted hole is filled with high strength mortar and only if the hole is not in the direction of the oblique tensile or shear load.
- After installation further turning of the anchor must not be possible. The head of the anchor is supported in the fixture and is not damaged.
- The borehole may be filled with injection mortar
- Adjustability according to Annex B6 for sizes 8-14, all embedment depths
- Cleaning of borehole is not necessary, if using a hollow drill

Ramset™ AnkaScrew™ Xtrem™

**Intended use**

Minimum thickness of member, minimum edge distance and minimum spacing

**Annex B4**

## Installation Instructions

Create hammer drilled or  
hollow drilled borehole

Remove drill dust by  
vacuuming or blowing of

Install with torque  
impact screw driver  
or torque wrench

The head must be  
undamaged and in  
contact with the fixture

Ramset™ AnkaScrew™ Xtrem™

Intended use  
Installation instructions

Annex B5

## Installation Instructions – Adjustment

### 1. Adjustment

Screw may be untightened maximum 10mm

After adjustment, tighten the screw again

The head must be undamaged and in contact with the fixture

### 2. Adjustment

Screw may be untightened maximum 10mm

After adjustment, tighten the screw again

The head must be undamaged and in contact with the fixture

#### Note:

The fastener can be adjusted maximum two times. The total allowed thickness of shims added during the adjustment process is 10mm. The final embedment depth after adjustment process must be larger or equal than  $h_{nom}$ .

Ramset™ AnkaScrew™ Xtrem™

#### Intended use

Installation instructions - Adjustment

Annex B6

## Installation Instructions – Filling annular gap

### Positioning of fixture and filling washer

### Filling the annular gap

Note:

For seismic loading the installation with filled and without filled annular gap is approved. Differences in performance can be found in Annex C5 - C7.

Ramset™ AnkaScrew™ Xtrem™

**Intended use**

Installation instructions - Filling annular gap

**Annex B7**
