General Part

Technical Assessment Body issuing the
European Technical Assessment:

Deutsches Institut für Bautechnik

Trade name of the construction product

Injection system HB-VMU plus for concrete

Product family
to which the construction product belongs

Bonded fastener for use in concrete

Manufacturer

Leviat GmbH
Liebigstraße 14
40764 Langenfeld
DEUTSCHLAND

Manufacturing plant

Leviat Herstellwerk HB1

This European Technical Assessment
contains

30 pages including 3 annexes which form an integral part
of this assessment

This European Technical Assessment is
issued in accordance with Regulation (EU)
No 305/2011, on the basis of

EAD 330499-01-0601, Edition 04/2020

This version replaces

ETA-16/0691 issued on 29 August 2016

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The "Injection system HB-VMU plus for concrete" is a bonded anchor consisting of a cartridge with injection mortar HB-VMU plus or HB-VMU plus Polar and a steel element. The steel element consists of a commercial threaded rod with washer and hexagon nut in the range of M8 to M30 or reinforcing bar in the range of \varnothing 8 to \varnothing 32 mm or an internal threaded anchor rod HB-VMU-IG-M6 to HB-VMU-IG-M20.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the fastener is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the fastener of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex B 2, C 1, C 3, C 4, C 7 and C 9
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 2, C 5, C 8, C 10
Displacements (static and quasi-static loading)	See Annex C 12 to C 14
Characteristic resistance and displacements for seismic performance categories C1	See Annex C 6 and C 11
Characteristic resistance and displacements for seismic performance categories C2	No performance assessed

3.2 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

English translation prepared by DIBt

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330499-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 16 December 2021 by Deutsches Institut für Bautechnik

Specification of intended use

Injection System HB-VMU plus	Threaded rod	Internally threaded anchor rod	Rebar
Static and quasi-static action	M8 - M30	IG-M6 - IG-M20 (zinc plated, A4, HCR)	Ø8 - Ø32
Seismic action, performance category C1	M8 - M30	-	Ø8 - Ø32
Base materials	compacted, reinforced or unreinforced normal weight concrete (without fibers), acc. to EN 206:2013 + A1:2016 strength classes C20/25 to C50/60 acc. to EN 206-1:2013+A1:2016 cracked and uncracked concrete		
Temperature Range I -40°C to +40°C	max long term temperature +24 °C and max short term temperature +40°C		
Temperature Range II -40°C to +80°C	max long term temperature +50 °C and max short term temperature +80°C		
Temperature Range III -40°C to 120°C	max long term temperature +72 °C and max short term temperature +120°C		

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (all materials).
- For all other conditions:
Intended use of Material according to Annx A4, Table A1 corresponding corrosion resistance classes CRC according to EN 1993-1-4:2006 +A1:2015

Design:

- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e. g. position of the fastener relative to reinforcement or to supports, etc.)
- Fasteners are designed under the responsibility of an engineer experienced in fasteners and concrete work
- Fasteners are designed in accordance with EN 1992-4:2018 and Technical Report TR 055, Edition February 2018

Installation:

- Dry or wet concrete: M8 to M30, IG-M6 to IG-M20, Rebar Ø8 to Ø32
- Waterfilled holes (not sea water): M8 to M16, IG-M6 to IG-M10, Rebar Ø8 to Ø16
- Hole drilling by hammer or compressed air drill mode or vacuum drill mode
- Installation direction D3: downwards, horizontally and upwards (overhead) installation
- Fastener installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- The injection mortar is assessed for installation at minimum concrete temperature of -10°C resp. -20°C, where subsequently the temperature in the concrete does not rise at a rapid rate, i.e. from the minimum installation temperature to 24°C within a 12-hour period.
- Internally threaded anchor rod: screws and threaded rods (incl. nut and washer) must at least correspond to the material and strength class of the internally threaded anchor rod used

Intended Use
Cleaning and setting tools

Annex B3

Installation instructions

Drilling of the hole

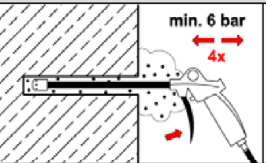

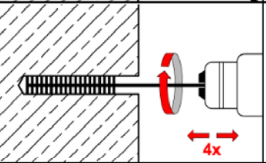

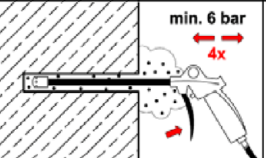

1		<p>Drill the hole by applying the drilling method acc. to Annex B1, the drill bit diameter (Table B4) and the selected drill hole depth. In case of aborted hole, the drill hole shall be filled with mortar</p>
---	---	--

Cleaning, all drilling methods

Attention! Standing water in the drill hole must be removed before cleaning!

Cleaning with compressed air

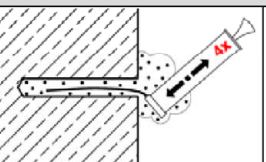

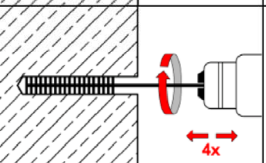

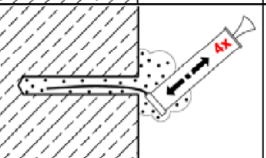

(all diameters, cracked and uncracked concrete)

2a		<p>Starting from the bottom or back of the drill hole, blow out the hole with compressed air (min. 6 bar) four times, until return air stream is free of noticeable dust. If the drill hole ground is not reached, an extension must be used.</p>
2b		<p>Brush the hole with an appropriate sized wire brush $> d_{b,min}$ (Table B4) four times. If the drill hole ground is not reached, a brush extension shall be used.</p>
2c		<p>Finally blow the hole clean again with compressed air (min. 6 bar) four times, until the outgoing airstream is free of dust. If the drill hole ground is not reached an extension shall be used.</p>

Manual cleaning

uncracked concrete: Drill hole diameter $d_0 \leq 20\text{mm}$ and effective anchorage depth $h_{ef} \leq 10 d_{nom}$

cracked concrete: Drill hole diameter: $14\text{mm} \leq d_0 \leq 20\text{mm}$ and effective anchorage depth $h_{ef} \leq 10 d_{nom}$

2a		<p>Starting from the bottom or back of the drill hole, blow the hole clean with the blow-out pump four times until return air stream is free of noticeable dust.</p>
2b		<p>Brush the hole four times with an appropriate sized wire brush $> d_{b,min}$ (Table B4). If the drill hole ground is not reached, a brush extension shall be used.</p>
2c		<p>Finally blow the hole clean again with the blow-out pump four times until return air stream is free of noticeable dust.</p>

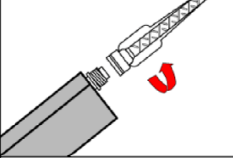

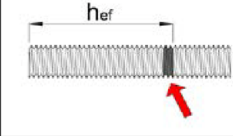

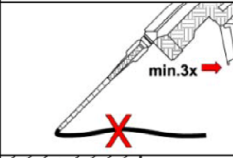

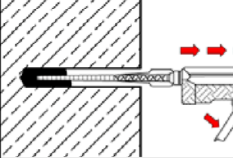

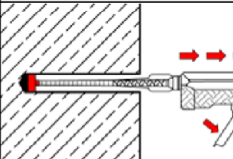

After cleaning, the drill hole has to be protected against re-contamination in an appropriate way, until dispensing the mortar in the drill hole. If necessary, the cleaning has to be repeated directly before dispensing the mortar. In-flowing water must not contaminate the drill hole again.

Injection System HB-VMU plus for concrete

Intended Use
Installation instructions

Annex B4

Installation instructions (continuation)

Injection		
3		Attach a supplied static-mixing nozzle to the cartridge and load the cartridge into the correct dispensing tool. For every working interruption longer than the recommended working time (Table B5 or Table B6) as well as for new cartridges, a new static-mixer shall be used.
4		Before injecting the mortar, mark the required anchorage depth on the fastening element.
5		Prior to dispensing into the drill hole, squeeze out separately a minimum of three full strokes and discard non-uniformly mixed adhesive components until the mortar shows a consistent grey colour. For tubular film cartridges dismiss a minimum of six full strokes.
6a		Starting from the bottom or back of the cleaned drill hole fill the hole up to approximately two-thirds with adhesive. Slowly withdraw the static mixing nozzle as the hole fills to avoid air pockets. For embedment larger than 190mm an extension nozzle shall be used. Observe the gel-/ working times given in Table B5 or Table B6.
6b		Retaining washer and mixer nozzle extensions shall be used according to Annex B3 for the following applications: <ul style="list-style-type: none"> • Horizontal installation (horizontal direction) and ground installation (vertical downwards direction): Drill bit-\varnothing $d_0 \geq 18$ mm and embedment depth $h_{ef} > 250$mm • Overhead installation: Drill bit-\varnothing $d_0 \geq 18$ mm

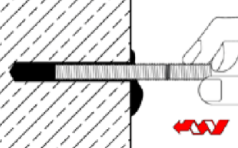

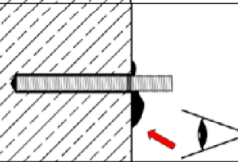

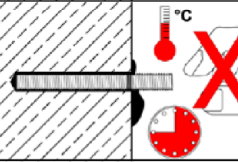

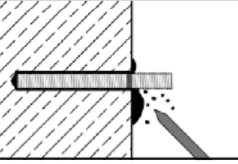

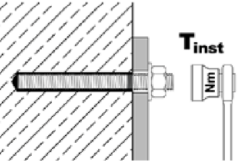

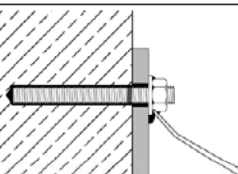

Injection System HB-VMU plus for concrete

Intended Use
Installation instructions (continuation)

Annex B5

Installation instructions (continuation)

Setting the fastening element

7		<p>Push fastening element into the hole while turning slightly to ensure proper distribution of the adhesive until the embedment depth is reached. The fastener shall be free of dirt, grease, oil or other foreign material.</p>
8		<p>Make sure that the fastening element is fully seated up to the full embedment depth and that excess mortar is visible at the top of the hole. If these requirements are not maintained, the application has to be renewed before the end of the working time. For overhead installation, the fastener should be fixed (e.g. by wedges).</p>
9		<p>Allow the adhesive to cure to the specified time prior to applying any load or torque. Do not move or load the fastener until it is fully cured (Table B5 or Table B6).</p>
10		<p>Remove excess mortar.</p>
11		<p>The fixture can be mounted after curing time. Apply installation torque $\leq T_{inst}$ according to Table B1 or B2.</p>
12		<p>Optionally, for pre-setting installation, the annular gap between anchor rod and attachment can be filled with mortar. Therefore replace the regular washer by washer with drill and plug on reducing adapter on static mixer. Annular gap is completely filled, when excess mortar seeps out.</p>
