Specific Part

1 Technical description of the product

The "fischer Injection system FIS AB" is a bonded fastener consisting of a cartridge with injection fischer mortar FIS AB or FIS AB High Speed or FIS AB Low Speed and a steel element according to Annex A4.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

| Essential characteristic | Performance |
|--|--------------------------------------|
| Characteristic resistance to tension load (static and quasi-static loading) | See Annex B 3 and B 4, C 1 to C 5 |
| Characteristic resistance to shear load (static and quasi-static loading) | See Annex C 1 to C 3 |
| Displacements under short-term and long-term loading | See Annex C 6 |
| Characteristic resistance and displacements for seismic performance categories C1 and C2 | No performance assessed |

3.2 Hygiene, health and the environment (BWR 3)

| Essential characteristic | Performance |
|--|-------------------------|
| Content, emission and/or release of dangerous substances | No performance assessed |

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330499-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 7 June 2021 by Deutsches Institut für Bautechnik

Specifications of intended use (part 2)

Base materials:

 Compacted reinforced or unreinforced normal weight concrete without fibres of strength classes C20/25 to C50/60 according to EN 206:2013+A1:2016

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (zinc coated steel, stainless steel or high corrosion resistant steel).
- For all other conditions according to EN1993-1-4:2015 corresponding to corrosion resistance classes to Annex A 5 table A5.1.

Design:

- Anchorages have to be designed by a responsible engineer with experience of concrete anchor design.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages are designed in accordance with:
 EN 1992-4:2018 and EOTA Technical Report TR 055, Edition February 2018.

Installation:

- Anchor installation is to be carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- · In case of aborted hole: The hole shall be filled with mortar
- Anchorage depth should be marked and adhered to on installation
- · Overhead installation is allowed

| Stainless steel R property class 80 | * | | |

Alternatively: Colour coding according to DIN 976-1:2016

1) PC = property class

Installation conditions:

Commercial standard threaded rods, washers and hexagon nuts may also be used if the following requirements are fulfilled

- Materials, dimensions and mechanical properties according to Annex A 5, Table A5.1
- · Inspection certificate 3.1 according to EN 10204:2004, the documents have to be stored
- Setting depth is marked

Installation instructions part 1

Drilling and cleaning the hole (hammer drilling with standard drill bit)

1

Drill the hole.

Nominal drill hole diameter **d**₀ and drill hole depth **h**₀ see **tables B3.1, B4.1**

2

Clean the drill hole: For $h_{ef} \le 12d$ and $d_0 < 18$ mm blow out the hole four times by hand

For $h_{ef} > 12d$ and / or $d_0 \ge 18$ mm blow out the hole four times with oil-free compressed air $(p \ge 6 \text{ bar})$

3

Brush the drill hole four times. For deep holes use an extension. Corresponding brushes see **table B5.1**

4

Clean the drill hole: For $h_{\text{ef}} \le 12d$ and $d_0 < 18$ mm blow out the hole four times by hand

For $h_{ef} > 12d$ and / or $d_0 \ge 18$ mm blow out the hole four times with oil-free compressed air $(p \ge 6 \text{ bar})$

Go to step 5

Drilling and cleaning the hole (hammer drilling with hollow drill bit)

1

Check a suitable hollow drill (see **table B1.1**) for correct operation of the dust extraction

2

Electronic copy of the ETA by DIBt: ETA-17/0350

Use a suitable dust extraction system, e. g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data

Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. Nominal drill hole diameter \mathbf{d}_0 and drill hole depth \mathbf{h}_0 see **tables B3.1, B4.1**

Go to step 5

fischer injection system FIS AB

Intended use

Installation instructions part 1

Annex B 6

Installation instructions part 2

Preparing the cartridge

Remove the sealing cap

Screw on the static mixer (the spiral in the static mixer must be clearly visible)

Place the cartridge into the dispenser

7

Extrude approximately 10 cm of material out until the resin is evenly grey in colour. Do not use mortar that is not uniformly grey

Go to step 8

Injection of the mortar

8

Fill approximately 2/3 of the drill hole with mortar. Always begin from the bottom of the hole and avoid bubbles

For drill hole depth ≥ 150 mm use an extension tube

For overhead installation, deep holes ($h_0 > 250$ mm) or drill hole diameter ($d_0 \ge 40$ mm) use an injection adapter

Go to step 9

fischer injection system FIS AB

Intended use

Installation instructions part 2

Annex B 7

Installation instructions part 3

Installation of anchor rods or fischer internal threaded anchors RG MI

Only use clean and oil-free metal parts. Mark the setting depth of the metal part. Push the anchor rod or fischer internal threaded RG MI anchor down to the bottom of the hole, turning it slightly while doing so.

After inserting the metal parts, excess mortar must be emerged around the anchor element.

For overhead installations support the metal part with wedges (e. g. fischer centering wedges) or fischer overhead clips.

For push through installation fill the annular gap with mortar

10

Wait for the specified curing time t_{cure} see table B5.2

11

Mounting the fixture max T_{inst} see tables B3.1 and B4.1

Option

After the minimum curing time is reached, the gap between metal part and fixture (annular clearance) may be filled with mortar via the fischer filling disc. Compressive strength \geq 50 N/mm² (e.g. fischer injection mortars FIS AB, FIS HB, FIS SB, FIS V, FIS EM Plus). ATTENTION: Using fischer filling disc reduces $t_{\rm fix}$ (usable length of the anchor)

fischer injection system FIS AB

Intended use
