## European Technical Assessment

**ETA-21/0172**  
**of 9 March 2021**

English translation prepared by DIBt - Original version in German language

### General Part

Technical Assessment Body issuing the  
European Technical Assessment:

Deutsches Institut für Bautechnik

Trade name of the construction product

Team Pro Injection system TP E SD+ for concrete

Product family  
to which the construction product belongs

Bonded fastener for use in concrete

Manufacturer

TEAM PRO INTERNATIONAL FZ-LLC  
Office No 1006A, Bldg No A2  
PO BOX 41010, RAK  
Vereinigte Arabische Emirate

Manufacturing plant

Team Pro Plant, Germany

This European Technical Assessment  
contains

39 pages including 3 annexes which form an integral part  
of this assessment

This European Technical Assessment is  
issued in accordance with Regulation (EU)  
No 305/2011, on the basis of

EAD 330499-01-0601, Edition 04/2020

**European Technical Assessment**

**ETA-21/0172**

English translation prepared by DIBt

**Page 2 of 39 | 9 March 2021**

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

## Specific Part

### 1 Technical description of the product

The "Team Pro Injection system TP E SD+ for concrete" is a bonded anchor consisting of a cartridge with injection mortar Injection mortar TP E SD+ and a steel element according to Annex A3 and A5.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 and/or 100 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

| Essential characteristic                                                                 | Performance                                        |
|------------------------------------------------------------------------------------------|----------------------------------------------------|
| Characteristic resistance to tension load (static and quasi-static loading)              | See Annex B 3, C 1 to C 5, C 7 to C 9, C 11 to C13 |
| Characteristic resistance to shear load (static and quasi-static loading)                | See Annex C 1, C 6, C 10, C 14                     |
| Displacements under short-term and long-term loading                                     | See Annex C 15 to C 17                             |
| Characteristic resistance and displacements for seismic performance categories C1 and C2 | See Annex C 18 to C 21                             |

#### 3.2 Hygiene, health and the environment (BWR 3)

| Essential characteristic                                 | Performance             |
|----------------------------------------------------------|-------------------------|
| Content, emission and/or release of dangerous substances | No performance assessed |

**4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

In accordance with the European Assessment Document EAD 330499-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

**5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document**

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 9 March 2021 by Deutsches Institut für Bautechnik

Dipl.-Ing. Beatrix Wittstock  
Head of Section

**Installation threaded rod M8 up to M30**

prepositioned installation or  
push through installation (annular gap filled with mortar)

**Installation reinforcing bar Ø8 up to Ø32**

**Installation internal threaded anchor rod IG-M6 up to IG-M20**

- $t_{fix}$  = thickness of fixture  
 $h_{ef}$  = effective anchorage depth  
 $h_0$  = depth of drill hole  
 $h_{min}$  = minimum thickness of member

**Team Pro Injection system TP E SD+ for concrete**

**Product description**  
Installed condition

**Annex A 1**

## Cartridge: TP E SD+

440ml, 585ml and 1400ml cartridge (Type: “side-by-side”)

## Static Mixer

## Piston Plug and Mixer Extension

Team Pro Injection system TP E SD+ for concrete

Product description  
Injection system

Annex A 2

### Threaded rod M8, M10, M12, M16, M20, M24, M27, M30 with washer and hexagon nut

Commercial standard threaded rod with:

- Materials, dimensions and mechanical properties acc. Table A1
- Inspection certificate 3.1 acc. to EN 10204:2004
- Marking of embedment depth

### Internal threaded anchor rod IG-M6, IG-M8, IG-M10, IG-M12, IG-M16, IG-M20

### Filling washer and mixer reduction nozzle for filling the annular gap between anchor rod and fixture

Team Pro Injection system TP E SD+ for concrete

#### Product description

Threaded rod, internal threaded rod and filling washer

Annex A 3

**Reinforcing bar Ø 8, Ø 10, Ø 12, Ø 14, Ø 16, Ø 20, Ø 24, Ø 25, Ø 28, Ø 32**

- Minimum value of related rip area  $f_{R,min}$  according to EN 1992-1-1:2004+AC:2010
- Rib height of the bar shall be in the range  $0,05d \leq h \leq 0,07d$   
(d: Nominal diameter of the bar; h: Rip height of the bar)

**Design:**

- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- The anchorages are designed in accordance to EN 1992-4:2018 and Technical Report TR 055, Edition February 2018

**Installation:**

- Dry, wet concrete or flooded bore holes (not sea-water).
- Hole drilling by hammer (HD), hollow (HDB), compressed air (CD) or diamond drill mode (DD).
- Overhead installation allowed.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.

**Table B1: Installation parameters for threaded rod**

| Anchor size                               |                                       |      | M8                                           | M10 | M12              | M16             | M20 | M24 | M27 | M30 |
|-------------------------------------------|---------------------------------------|------|----------------------------------------------|-----|------------------|-----------------|-----|-----|-----|-----|
| Diameter of element                       | $d = d_{nom}$                         | [mm] | 8                                            | 10  | 12               | 16              | 20  | 24  | 27  | 30  |
| Nominal drill hole diameter               | $d_0$                                 | [mm] | 10                                           | 12  | 14               | 18              | 22  | 28  | 30  | 35  |
| Effective embedment depth                 | $h_{ef,min}$                          | [mm] | 60                                           | 60  | 70               | 80              | 90  | 96  | 108 | 120 |
|                                           | $h_{ef,max}$                          | [mm] | 160                                          | 200 | 240              | 320             | 400 | 480 | 540 | 600 |
| Diameter of clearance hole in the fixture | Prepositioned installation $d_f \leq$ | [mm] | 9                                            | 12  | 14               | 18              | 22  | 26  | 30  | 33  |
|                                           | Push through installation $d_f$       | [mm] | 12                                           | 14  | 16               | 20              | 24  | 30  | 33  | 40  |
| Maximum torque moment                     | $\max T_{inst} \leq$                  | [Nm] | 10                                           | 20  | 40 <sup>1)</sup> | 60              | 100 | 170 | 250 | 300 |
| Minimum thickness of member               | $h_{min}$                             | [mm] | $h_{ef} + 30 \text{ mm} \geq 100 \text{ mm}$ |     |                  | $h_{ef} + 2d_0$ |     |     |     |     |
| Minimum spacing                           | $s_{min}$                             | [mm] | 40                                           | 50  | 60               | 75              | 95  | 115 | 125 | 140 |
| Minimum edge distance                     | $c_{min}$                             | [mm] | 35                                           | 40  | 45               | 50              | 60  | 65  | 75  | 80  |

<sup>1)</sup> Maximum Torque moment for M12 with steel Grade 4.6 is 35 Nm

**Table B2: Installation parameters for rebar**

| Anchor size                 |               |      | Ø 8 <sup>1)</sup>                            | Ø 10 <sup>1)</sup> | Ø 12 <sup>1)</sup> | Ø 14            | Ø 16 | Ø 20 | Ø 24 <sup>1)</sup> | Ø 25 <sup>1)</sup> | Ø 28 | Ø 32 |
|-----------------------------|---------------|------|----------------------------------------------|--------------------|--------------------|-----------------|------|------|--------------------|--------------------|------|------|
| Diameter of element         | $d = d_{nom}$ | [mm] | 8                                            | 10                 | 12                 | 14              | 16   | 20   | 24                 | 25                 | 28   | 32   |
| Nominal drill hole diameter | $d_0$         | [mm] | 10                                           | 12                 | 14                 | 16              | 18   | 20   | 25                 | 30                 | 32   | 35   |
| Effective embedment depth   | $h_{ef,min}$  | [mm] | 60                                           | 60                 | 70                 | 75              | 80   | 90   | 96                 | 100                | 112  | 128  |
|                             | $h_{ef,max}$  | [mm] | 160                                          | 200                | 240                | 280             | 320  | 400  | 480                | 500                | 560  | 640  |
| Minimum thickness of member | $h_{min}$     | [mm] | $h_{ef} + 30 \text{ mm} \geq 100 \text{ mm}$ |                    |                    | $h_{ef} + 2d_0$ |      |      |                    |                    |      |      |
| Minimum spacing             | $s_{min}$     | [mm] | 40                                           | 50                 | 60                 | 70              | 75   | 95   | 120                | 120                | 130  | 150  |
| Minimum edge distance       | $c_{min}$     | [mm] | 35                                           | 40                 | 45                 | 50              | 50   | 60   | 70                 | 70                 | 75   | 85   |

<sup>1)</sup> both nominal drill hole diameter can be used

**Table B3: Installation parameters for Internal threaded anchor rod**

| Anchor size                                |                      |      | IG-M6                                        | IG-M8 | IG-M10 | IG-M12          | IG-M16 | IG-M20 |
|--------------------------------------------|----------------------|------|----------------------------------------------|-------|--------|-----------------|--------|--------|
| Internal diameter of anchor rod            | $d_2$                | [mm] | 6                                            | 8     | 10     | 12              | 16     | 20     |
| Outer diameter of anchor rod <sup>1)</sup> | $d = d_{nom}$        | [mm] | 10                                           | 12    | 16     | 20              | 24     | 30     |
| Nominal drill hole diameter                | $d_0$                | [mm] | 12                                           | 14    | 18     | 22              | 28     | 35     |
| Effective embedment depth                  | $h_{ef,min}$         | [mm] | 60                                           | 70    | 80     | 90              | 96     | 120    |
|                                            | $h_{ef,max}$         | [mm] | 200                                          | 240   | 320    | 400             | 480    | 600    |
| Diameter of clearance hole in the fixture  | $d_f \leq$           | [mm] | 7                                            | 9     | 12     | 14              | 18     | 22     |
| Maximum torque moment                      | $\max T_{inst} \leq$ | [Nm] | 10                                           | 10    | 20     | 40              | 60     | 100    |
| Thread engagement length min/max           | $l_{IG}$             | [mm] | 8/20                                         | 8/20  | 10/25  | 12/30           | 16/32  | 20/40  |
| Minimum thickness of member                | $h_{min}$            | [mm] | $h_{ef} + 30 \text{ mm} \geq 100 \text{ mm}$ |       |        | $h_{ef} + 2d_0$ |        |        |
| Minimum spacing                            | $s_{min}$            | [mm] | 50                                           | 60    | 75     | 95              | 115    | 140    |
| Minimum edge distance                      | $c_{min}$            | [mm] | 40                                           | 45    | 50     | 60              | 65     | 80     |

#### CAC - Rec. compressed air tool (min 6 bar)

Drill bit diameter ( $d_0$ ): all diameters

#### HDB – Hollow drill bit system

Drill bit diameter ( $d_0$ ): all diameters

The hollow drill bit system contains the Heller Duster Expert hollow drill bit and a class M vacuum with minimum negative pressure of 253 hPa and flow rate of minimum 150 m³/h (42 l/s).

**Team Pro Injection system TP E SD+ for concrete**

**Intended Use**

Cleaning and setting tools

**Annex B 4**

## Installation instructions

### Drilling of the bore hole (HD, HDB, CD)

#### 1a. Hammer (HD) or compressed air drilling (CD)

Drill a hole into the base material to the size and embedment depth required by the selected anchor (Table B1, B2 or B3).

Proceed with Step 2.

In case of aborted drill hole, the drill hole shall be filled with mortar.

#### 1b. Hollow drill bit system (HDB) (see Annex B 3)

Drill a hole into the base material to the size and embedment depth required by the selected anchor (Table B1, B2 or B3). This drilling system removes the dust and cleans the bore hole during drilling (all conditions).

Proceed with Step 3.

In case of aborted drill hole, the drill hole shall be filled with mortar.

**Attention! Standing water in the bore hole must be removed before cleaning.**

### CAC: Cleaning for dry, wet and water-filled bore holes with all diameter in uncracked and cracked concrete

#### 2a.

Starting from the bottom or back of the bore hole, blow the hole clean with compressed air (min. 6 bar) (Annex B 4) a minimum of two times until return air stream is free of noticeable dust. If the bore hole ground is not reached an extension shall be used

#### 2b.

Check brush diameter (Table B4). Brush the hole with an appropriate sized wire brush  $> d_{b,min}$  (Table B4) a minimum of two times.

If the bore hole ground is not reached with the brush, a brush extension must be used.

#### 2c.

Finally blow the hole clean again with compressed air (min. 6 bar) (Annex B 4) a minimum of two times until return air stream is free of noticeable dust. If the bore hole ground is not reached an extension shall be used.

**After cleaning, the bore hole has to be protected against re-contamination in an appropriate way, until dispensing the mortar in the bore hole. If necessary, the cleaning has to be repeated directly before dispensing the mortar. In-flowing water must not contaminate the bore hole again.**

Intended Use  
Installation instructions

**Annex B 5**

## Installation instructions (continuation)

### Drilling of the bore hole (DD)

#### 1a. Diamond drilling (DD)

Drill with diamond drill a hole into the base material to the size and embedment depth required by the selected anchor (Table B1, B2, or B3).

Proceed with Step 2.

In case of aborted drill hole, the drill hole shall be filled with mortar.

**Attention! Standing water in the bore hole must be removed before cleaning.**

### SPCAC: Cleaning for dry, wet and water-filled bore holes with all diameter in uncracked and cracked concrete

#### 2a. Rinsing with water until clear water comes out.

#### 2b. Check brush diameter (Table B4). Brush the hole with an appropriate sized wire brush $> d_{b,min}$ (Table B4) a minimum of two times.

If the bore hole ground is not reached with the brush, a brush extension must be used.

#### 2c. Rinsing again with water until clear water comes out.

#### 2d. Starting from the bottom or back of the bore hole, blow the hole clean with compressed air (min. 6 bar) (Annex B 4) a minimum of two times until return air stream is free of noticeable dust. If the bore hole ground is not reached an extension shall be used

#### 2e. Check brush diameter (Table B4). Brush the hole with an appropriate sized wire brush $> d_{b,min}$ (Table B4) a minimum of two times.

If the bore hole ground is not reached with the brush, a brush extension must be used.

Intended Use  
Installation instructions (continuation)

Annex B 6

## Installation instructions (continuation)

- 2f. Finally blow the hole clean again with compressed air (min. 6 bar) (Annex B 4) a minimum of two times until return air stream is free of noticeable dust. If the bore hole ground is not reached an extension shall be used.

3. Attach the supplied static-mixing nozzle to the cartridge and load the cartridge into the correct dispensing tool.  
For every working interruption longer than the recommended working time (Table B5) as well as for new cartridges, a new static-mixer shall be used.

4. Prior to inserting the anchor rod into the filled bore hole, the position of the embedment depth shall be marked on the anchor rods.

5. Prior to dispensing into the anchor hole, squeeze out separately a minimum of three full strokes and discard non-uniformly mixed adhesive components until the mortar shows a consistent grey or red colour.

6. Starting from the bottom or back of the cleaned anchor hole, fill the hole up to approximately two-thirds with adhesive. Slowly withdraw the static mixing nozzle as the hole fills to avoid creating air pockets. If the bottom or back of the anchor hole is not reached, an appropriate extension nozzle must be used. Observe the gel-/ working times given in Table B5.

7. Piston plugs shall be used according to Table B4 for the following applications:
- Horizontal assembly (horizontal direction) and ground erection (vertical downwards direction): Drill bit-Ø  $d_0 \geq 18$  mm and embedment depth  $h_{ef} > 250$  mm
  - Overhead assembly (vertical upwards direction): Drill bit-Ø  $d_0 \geq 18$  mm
- Assemble mixing nozzle, mixer extension and piston plug before injecting mortar.

Intended Use  
Installation instructions (continuation)

Annex B 7

## Installation instructions (continuation)

8. Insert piston plug to back of the hole and inject adhesive. If the bottom or back of the anchor hole is not reached, an appropriate extension nozzle must be used.  
During injection the piston plug is naturally pushed out of the borehole by the back pressure of the mortar. Observe the gel-/ working times given in Table B5.

9. Push the fixing element into the anchor hole while turning slightly to ensure positive distribution of the adhesive until the embedment mark has reached the surface level.

The anchor shall be free of dirt, grease, oil or other foreign material.

10. After inserting the anchor, the annular gap between anchor rod and concrete, in case of a push through installation additionally also the fixture, must be complete filled with mortar. If excess mortar is not visible at the top of the hole, the requirement is not fulfilled and the application has to be renewed.

11. For overhead application the anchor rod shall be fixed (e.g. wedges) until the mortar has started to harden.

12. Allow the adhesive to cure to the specified time prior to applying any load or torque. Do not move or load the anchor until it is fully cured (attend Table B5).

13. After full curing, the add-on part can be installed with up to the max. torque (Table B1 or B3) by using a calibrated torque wrench. In case of prepositioned installation the annular gap between anchor and fixture can be optional filled with mortar. Therefor substitute the washer by the filling washer and connect the mixer reduction nozzle to the tip of the mixer. The annular gap is filled with mortar, when mortar oozes out of the washer.
