The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

**European Technical Assessment****ETA-10/0475**

**Specific part****1 Technical description of the product**

The Berner frame fixing in the range BXRfix 8, BXRLfix 8, BXRfix 10, BXRLfix 10 and BXRLfix 14 is a plastic anchor consisting of a plastic sleeve made of polyamide and an accompanying specific screw of galvanised steel, of galvanised steel with an additional Duplex-coating or of stainless steel.

The plastic sleeve is expanded by screwing in the specific screw which presses the sleeve against the wall of the drilled hole.

The product description is given in Annex A.

**2 Specification of the intended use in accordance with the applicable European Assessment Document**

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchors of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

**3 Performance of the product and references to the methods used for its assessment****3.1 Safety in case of fire (BWR 2)**

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C 2

**3.2 Mechanical resistance and stability (BWR 4)**

Essential characteristic	Performance
Resistance to steel failure under tension loading	See Annex C 1
Resistance to steel failure under shear loading	See Annex C 1
Resistance to pull-out or concrete failure under tension loading (base material group a)	See Annex C 1
Resistance in any load direction without lever arm (base material group b, c, d)	See Annexes C 3 – C 20
Edge distance and spacing (base material group a)	See Annex B 4
Edge distance and spacing (base material group b, c, d)	See Annex B 5
Displacements under short-term and long-term loading	See Annex C 2
Durability	See Annex B 1

Page 4 of 40 | 21 March 2022

**4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

In accordance with European Assessment Document EAD 330284-00-0604 the applicable European legal act is: 97/463/EC.

The system to be applied is: 2+

**5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD**

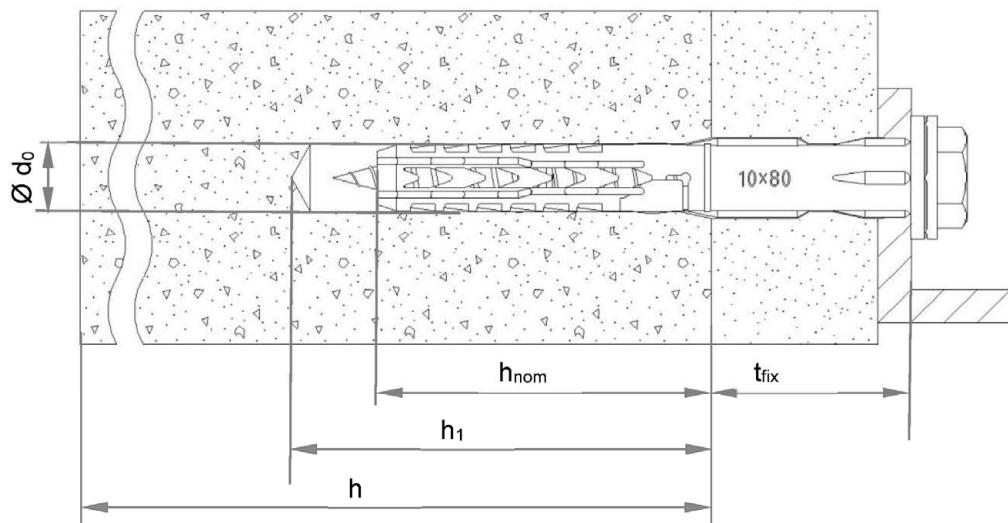

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Issued in Berlin on 21 March 2022 by Deutsches Institut für Bautechnik

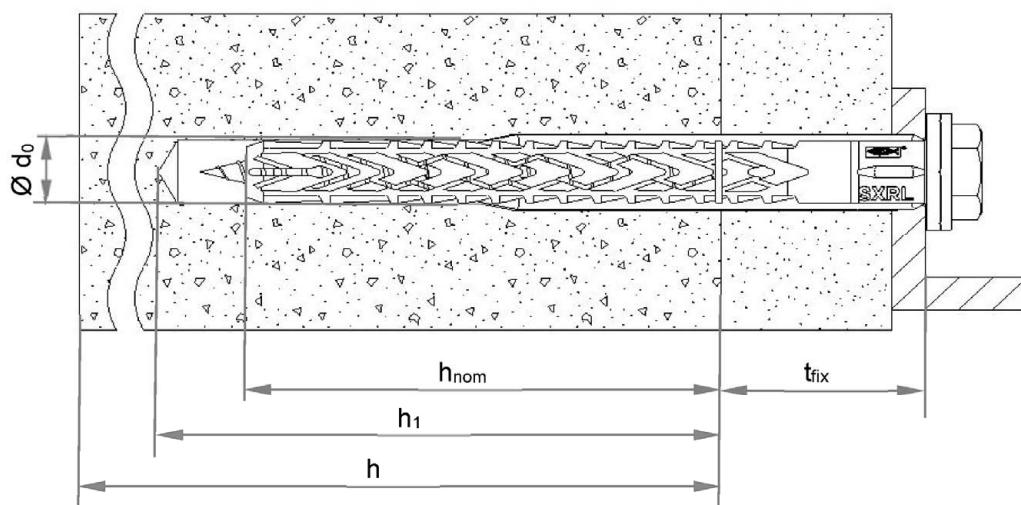

Dipl.-Ing. Beatrix Wittstock  
Head of Section

Ziegler

**BXRfix**

**BXRLfix (e.g. with  $h_{nom2}$ )**

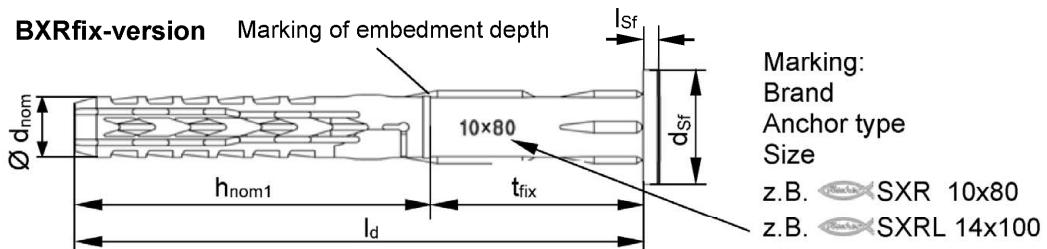

**Legend**

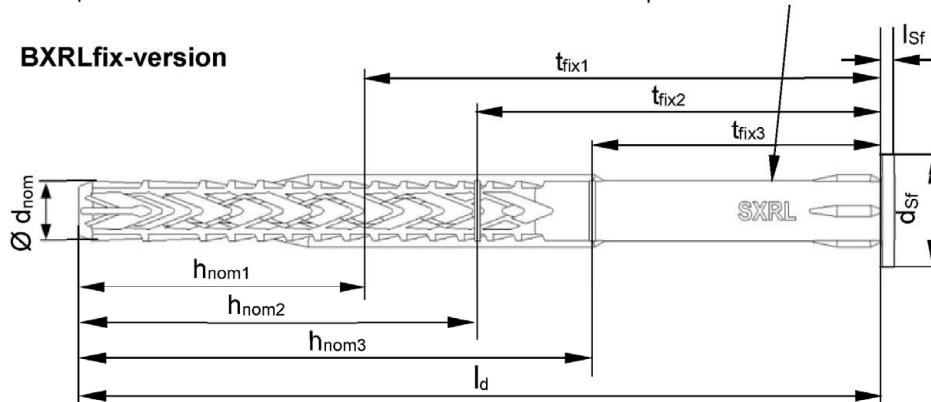

- $d_0$  = Nominal drill hole diameter
- $h_{nom}$  = Overall plastic anchor embedment depth in the base material
- $h_1$  = Depth of drill hole to deepest point
- $h$  = Thickness of member (wall)
- $t_{fix}$  = Thickness of fixture and / or non-load bearing layer

### Anchor sleeves – flat collar versions of BXRfix and BXRLfix

#### BXRfix-version Marking of embedment depth

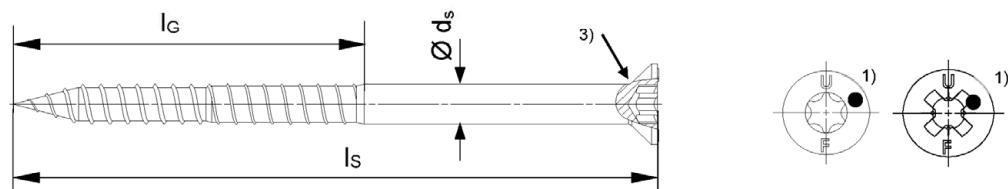

#### BXRLfix-version

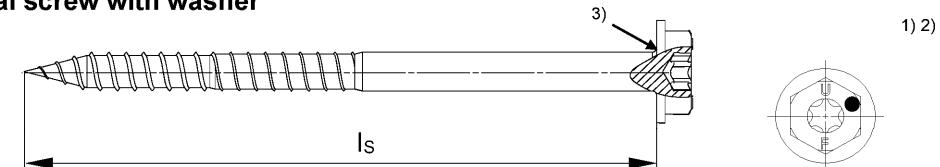

#### Countersunk sleeve version also available for both versions

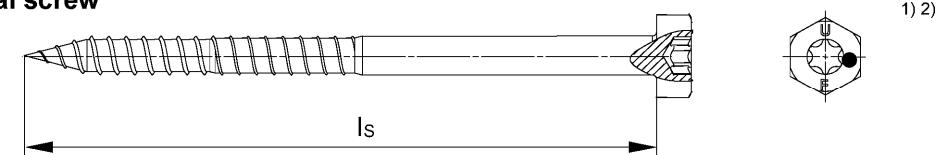

#### Countersunk screws

#### Hexagonal screw with washer

#### Hexagonal screw

1) Additional marking for the special screw, stainless steel version: e.g. "A4" or "R" or "A2".

2) Internal driving feature for Torx bit is optional for hexagonal head.

3) Optional additional version with underhead ribs.

**Product description**  
Dimensions and materials

**Annex A 3**

## Specifications of intended use

### Anchors subject to:

- Static and quasi-static loads.
- Redundant non-structural systems.

### Base materials:

- Reinforced or unreinforced compacted normal weight concrete without fibres, strength classes  $\geq$  C12/15 (base material group "a"), in accordance with EN 206:2013+A1:2016, see Annex C 1 and C 2.
- Thin-walled concrete components (e.g. weather shells) in accordance with EN 206:2013+A1:2016  $\geq$  40 mm thickness.
- Solid brick masonry (base material group "b") as per EN 771-1:2011+A1:2015, EN 771-2:2011+A1:2015 or EN 771-3:2011+A1:2015, see Annex C 3 – C 7.  
Note: The characteristic resistance is also valid for larger brick sizes and higher compressive strength of the masonry unit.
- Hollow brick masonry (base material group "c"), as per EN 771-1:2011+A1:2015, EN 771-2:2011+A1:2015 or EN 771-3:2011+A1:2015, see Annex B 7 – B 13 and C 7 – C 19.
- Reinforced autoclaved aerated concrete (base material group "d"), as per EN 12602:2016, and unreinforced autoclaved aerated concrete (base material group "d") as per EN 771-4:2011+A1:2015, see Annex C 20.
- Mortar strength class of the masonry  $\geq$  M2,5 in accordance with EN 998-2:2010.
- For other comparable base materials of the base material group "a", "b", "c" and "d" the characteristic resistance of the anchor may be determined by job site tests in accordance with TR 051:2018-04.

### Temperature Range:

#### BXRfix 8 and 10 and BXRLfix 8

- c: - 40 °C to 50 °C (max. short term temperature + 50 °C and max long term temperature + 30 °C)
- b: - 40 °C to 80 °C (max. short term temperature + 80 °C and max long term temperature + 50 °C)

#### BXRLfix 10 and 14

- c: - 20 °C to 50 °C (max. short term temperature + 50 °C and max long term temperature + 30 °C)
- b: - 20 °C to 80 °C (max. short term temperature + 80 °C and max long term temperature + 50 °C)

### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions: Special screw made of zinc coated steel or stainless steel.
- The specific screw made of galvanised steel or galvanised steel with an additional organic layer may also be used in structures subject to external atmospheric exposure, if the area of the head of the screw is protected against moisture and driving rain after mounting of the fixing unit in this way, that intrusion of moisture into the anchor shaft is prevented. Therefore, there shall be an external cladding or a ventilated rainscreen mounted in front of the head of the screw and the head of the screw itself shall be coated with a soft plastic, permanently elastic bitumen-oil-combination coating (e.g. undercoating or body cavity protection for cars).
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist: Special screw made of stainless steel "A4" or "R".

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

Berner frame fixing BXRfix / BXRLfix	Annex B 1
Intended use Specifications	

**Design:**

- The anchorages are to be designed in accordance with TR 064:2018-05 under the responsibility of an engineer experienced in anchorages and masonry work.
- Verifiable calculation notes and drawings shall be prepared taking account of the loads to be anchored, the nature and strength of the base materials and the dimensions of the anchorage members as well as of the relevant tolerances. The position of the anchor is indicated on the design drawings.
- Fasteners are only to be used for redundant non-structural systems in accordance with TR 064:2018-05.

**Installation:**

- Hole drilling by the drilling method in accordance with Annex C 1 for base material group "a", and in accordance with Annexes C 3 – C 20 for base material group "b", "c" and "d".
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Installation temperature: BXRfix 8/10, BXRLfix 8, BXRLfix 14: - 5 °C to + 40 °C  
BXRLfix 10: - 20 °C to + 40 °C
- Exposure to UV due to solar radiation of the not protected anchor ≤ 6 weeks.
- No ingress of water in the borehole at temperatures < 0 °C.

		C12/15		140	100	$s_{min} = 70$ for $c \geq 210$ $c_{min} = 85$ for $s \geq 100$
BXRLfix 10	$\geq 50$	$\geq C16/20$	100 <sup>4)</sup>	100	105	$s_{min} = 50$ for $c \geq 100$ $c_{min} = 50$ for $s \geq 125$
		C12/15		140	120	$s_{min} = 70$ for $c \geq 140$ $c_{min} = 70$ for $s \geq 175$
	$\geq 70$ <sup>2)</sup>	$\geq C16/20$		100	105	$s_{min} = 50$ for $c \geq 100$ $c_{min} = 50$ for $s \geq 125$
		C12/15		140	120	$s_{min} = 70$ for $c \geq 140$ $c_{min} = 70$ for $s \geq 175$
BXRLfix 14	$\geq 70$ <sup>3)</sup>	$\geq C16/20$	110	100	120	$s_{min} = 60$ for $c \geq 100$ $c_{min} = 60$ for $s \geq 125$
		C12/15		140	135	$s_{min} = 85$ for $c \geq 140$ $c_{min} = 85$ for $s \geq 175$

<sup>1)</sup> Intermediate values by linear interpolation.

<sup>2)</sup> Values valid for reinforced concrete.

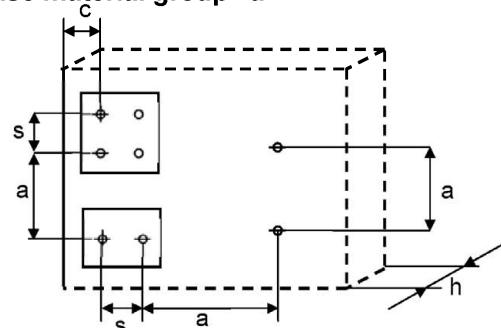

Please note: Values for non-reinforced concrete are  $h_{min} = 110$  mm and  $c_{min} = s_{min} = 80$  mm for concrete  $\geq C16/20$  and  $c_{min} = s_{min} = 110$  mm for concrete C12/15.

<sup>3)</sup> Please note: Values for non-reinforced concrete are  $h_{min} = 110$  mm,  $c_{min} = 100$  mm,  $s_{min} = 80$  mm for concrete  $\geq C16/20$  and  $c_{min} = 140$  mm,  $s_{min} = 110$  mm for concrete C12/15.

<sup>4)</sup> Also valid for thin concrete slabs  $h \geq 40$  mm,  $h_{nom} = 50$  mm to 59 mm.

Fixing points with a spacing  $a \leq s_{cr}$  are considered as a group with a maximum characteristic resistance  $N_{Rk,p}$  acc. to Table C1.3. For a spacing  $a > s_{cr}$  the anchors are considered as single anchors, each with a characteristic resistance  $N_{Rk,p}$  acc. to Table C1.3.

**Annex B 5**

## Installation instructions

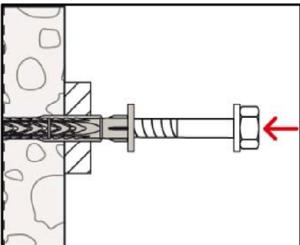

The following pictures show fixing through timber in concrete and hollow brick.  
Summary of all kind of masonry brick see Annex C.

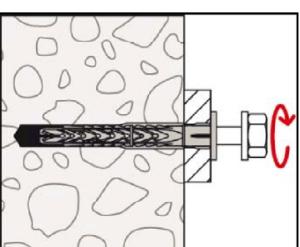

1. Drill the bore hole acc. to Table B3.1 using the drill method described in the corresponding Annex C.

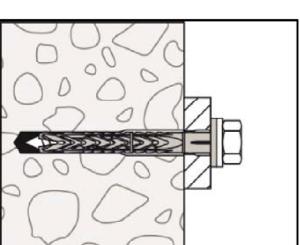

2. For use in base material group "a" (concrete), "b" (solid brick), "d" (autoclaved aerated concrete): Remove dust from borehole.

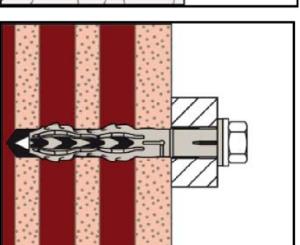

3. Insert anchor (screw and sleeve) by using a hammer until the collar of the plastic sleeve is flush with the surface of the fixture.

4. The screw is screwed-in until the head of the screw touches the sleeve. The anchor is correctly installed, if the head of the screw fits tight on the surface and nor the anchor sleeve neither the screw cannot be turned-in any further.

5. Correctly installed anchor in base material group „a“ concrete „b“ solid brick and „d“ autoclaved aerated concrete.

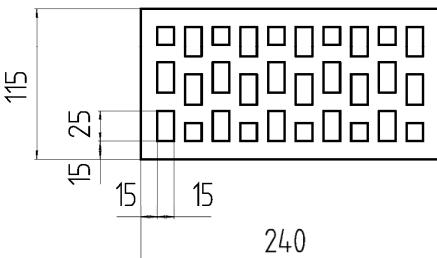

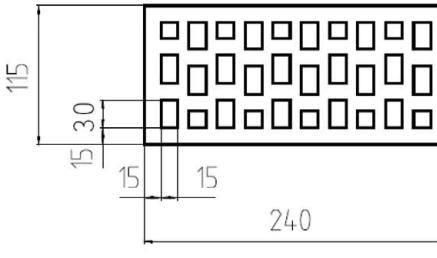

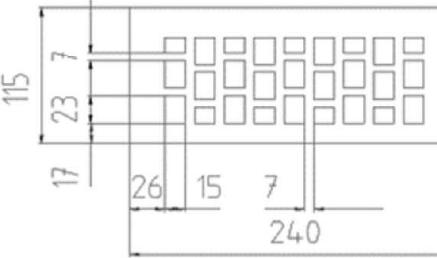

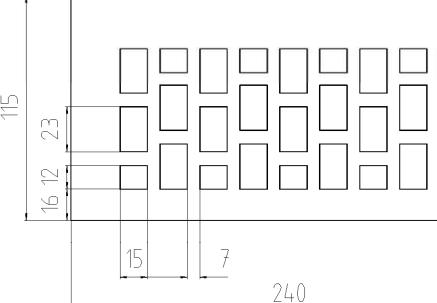

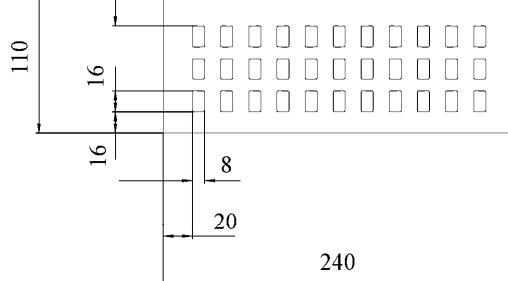

6. Correctly installed anchor in base material group „c“ hollow and perforated brick.
