Bautechnisches Prüfamt

An institution established by the Federal and Laender Governments

Designated according to Article 29 of Regulation (EU) No 305/2011 and member of EOTA (European Organisation for Technical Assessment)

European Technical Assessment ETA-13/0222 of 5 April 2022

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the European Technical Assessment:	Deutsches Institut für Bautechnik
Trade name of the construction product	DEMU Fixing anchor T-FIXX
Product family to which the construction product belongs	Cast-in anchor with internal threaded socket
Manufacturer	Leviat GmbH Liebigstraße 14 40764 Langenfeld DEUTSCHLAND
Manufacturing plant	Leviat Herstellwerke
This European Technical Assessment contains	16 pages including 3 annexes which form an integral part of this assessment
This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of	EAD 330012-01-0601, Edition 02/ 2021
This version replaces	ETA-13/0222 issued on 4 December 2015

Deutsches Institut für Bautechnik
Kolonnenstraße 30 B | 10829 Berlin | GERMANY | Phone: +49 30 78730-0 | Fax: +49 30 78730-320 | Email: dibt@dibt.de | www.dibt.de

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The DEMU Fixing anchor T-FIXX in the size of M10, M12, M16 and M20 is an anchor consisting of an internal threaded socket deformed at one end. The socket is made of galvanised steel or stainless steel. The anchor is imbedded surface-flush or sunk in the concrete. The anchorage is characterised by mechanical interlock at the deformed end of the socket.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic values for tension loading under static and quasi-static actions and displacements	
- Resistance to steel failure for tension loading	See Annex C1
- Resistance to pull-out failure	See Annex C1
- Resistance to concrete cone failure	See Annex C1
- Resistance to splitting and edge distance to prevent splitting and blow-out failure	See Annex C1
- Minimum edge distance and spacing	See Annex B3
- Maximum torque moment	See Annex B5
- Displacements for tension loading	See Annex C2

Essential characteristic	Performance
Characteristic values for shear loading under static and quasi-static actions and displacements	
- Resistance to steel failure for shear loading	See Annex C2
- Resistance to concrete edge failure without supplementary reinforcement	See Annex C3
- Resistance to concrete edge failure with supplementary reinforcement	No performance assessed
- Resistance to pry-out failure	See Annex C3
- Displacements for shear loading	See Annex C3
Characteristic values for seismic performance categories C1 and C2 and displacements	No performance assessed

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C4

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with EAD No. 330012-01-0601, the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Issued in Berlin on 5 April 2022 by Deutsches Institut für Bautechnik

Product description Marking and materials	

Deutsches Institut für Bautechnik DIBt

Specifications of Intended use

Anchorages subject to:

- Static and quasi-static loads.
- Fire exposure: only for concrete C20/25 to C50/60.

Base material:

- Reinforced or unreinforced compacted normal weight concrete without fibers in accordance with EN 206:2013+A1:2016
- Strength classes C20/25 to C90/105 in accordance with EN 206:2013+A1:2016
- Cracked or uncracked concrete

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (material1 and 2 in accordance with Annex A3).
- In accordance with EN 1993-1-4:2015 according to the Corrosion Resistance Class – see Annex A3 Table A2 and Table A3, Material 2.

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages under static or quasi-static actions are designed in accordance with:
  - EN 1992-4:2018
- Anchorages under fire exposure are designed in accordance with:
  - EN 1992-4:2018, Annex D

    (local spalling of the concrete cover must be avoided)
- Requirements for the screw:
  - Material in accordance with Annex A3, Table A3
  - Strength class in accordance with Annex C1 and C2
  - Length in accordance with Annex B2, Table B1

Installation:

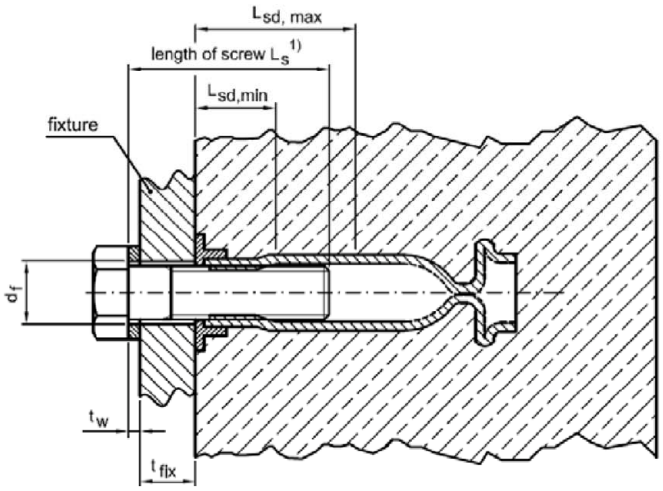
- Anchor installation carried out by appropriately quantified personnel and under the supervision of the person responsible for technical matters of the site.
- Use of the anchor only as supplied by the manufacturer without any manipulation or exchanging the components.
- The anchors are fixed on the formwork so that no movement of the anchors will occur during the time of laying the reinforcement and of placing and compacting the concrete.
- Adequate compaction close to the anchor particularly at head of eth bolt, e.g. without significant voids. The cast-in anchor is protected against ingress of concrete into the threaded socket.
- The installation torques given in Annex B2 are not exceeded.
- The inner area of the socket of the anchor made of galvanised steel has to be protected against ingress water.

DEMU Fixing anchor T-FIXX	Annex B1
Intended use Specifications	

Deutsches Institut für Bautechnik DIBt

Direct contact between fixture and data clip

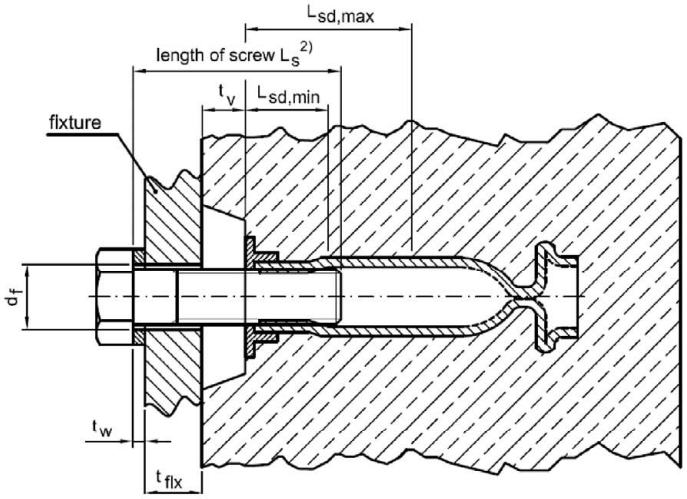
The fixture is braced to the data clip, if necessary by suitable washers.



1) $t_w + t_{fix} + l_{sd,min} \leq l_s \leq t_w + t_{fix} + l_{sd,max}$

General application

The fixture is braced to the concrete, the fixing anchor being embedded flush or recessed in the concrete.



2) $t_w + t_{fix} + t_v + l_{sd,min} \leq l_s \leq t_w + t_{fix} + t_v + l_{sd,max}$

Table B1: **Installation parameters**

Thread	d	[mm]	M10	M12	M16	M20
Maximum torque moment	max. T_{inst}	[Nm]	≤ 8	≤ 10	≤ 30	≤ 60

Intended use Arrangement of fixing anchors and member thickness	

Deutsches Institut für Bautechnik DIBt

Installation instruction - part 1

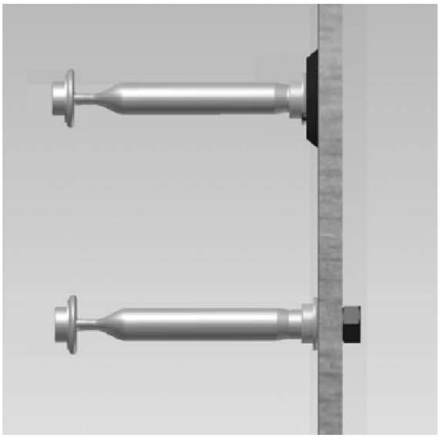
1. Scope of delivery

1) Selection of fixing anchor in accordance with the planning documents.

1a) DEMU T-FIXX made of galvanised steel (GV) or stainless steel (A4)

1b) Data clip for T-FIXX GV, colour: grey
Data clip for T-FIXX A4, colour: white

2. Fixing of the anchor to the formwork



1) Attach data clip to the fixing anchor.

2) Fix the anchor to the formwork with the help of DEMU assembly accessories (e. g. nailing plate) or alternatively by hexagon bolts.

→ The inside of the threaded socket must be protected against ingress of dirt and water.

3) If necessary, supplementary reinforcement has to be placed according to the planning documents.

3. Pouring and compacting of concrete

1) Pour concrete carefully, make sure the anchor stays in place!

2) Compact concrete carefully, avoid direct contact between compacting device and anchor.

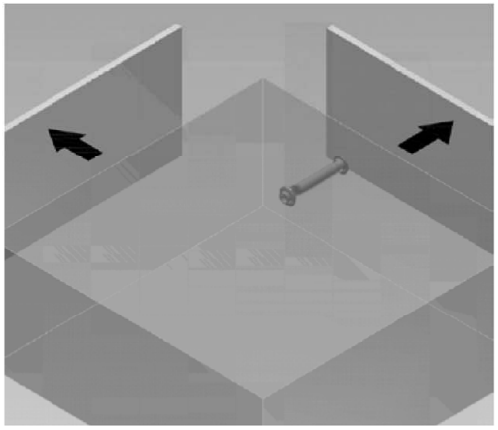
→ The anchor must not be moved by force or damaged!

DEMU Fixing anchor T-FIXX	
Intended use Installation instruction – part 1	Annex B4

Deutsches Institut für Bautechnik DIBt

Installation instruction - part 2

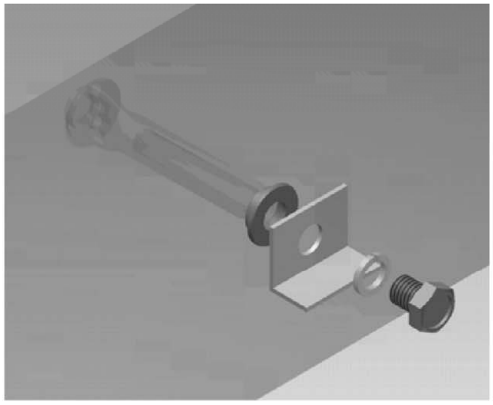
4. Hardening of the concrete, striking the formwork



1) Remove assembly accessories and formwork.

2) Check if the inside of the threaded socket is free from dirt, otherwise clean it;
further protection against ingress of water, dirt, etc. until required for use.

5. Mounting of fixture

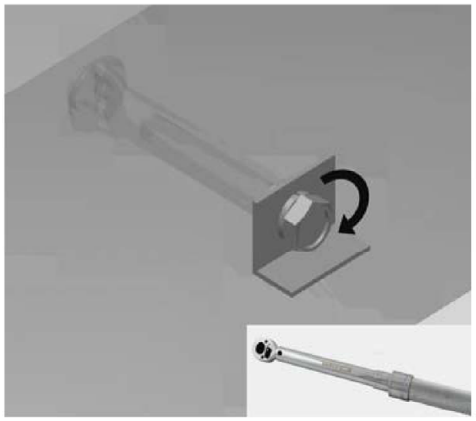


1) Make sure that the concrete has reached its final strength.

2) Check the length of the required bolt.
→ Maximum / minimum screw-in length in accordance with Annex B2!

3) Mounting of the fixture
→ Use fixing components according Annex A3, Table A3.
→ Maximum torque moments, see table below!
→ Take additionally care of assembly advices for the fixture.

6. Maximum torque moments



Apply torque moment with the help of a torque wrench.
T_{inst} must not be exceeded.

Maximum torque moment T_{inst}						
Thread	d	[mm]	M10	M12	M16	M20
maximum installation torque	max. T_{inst}	[Nm]	≤ 8	≤ 10	≤ 30	≤ 60
