part of this assessment

EAD 280016-00-0602

ETA-21/0140 issued on 17 March 2021

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

## Specific Part

### 1 Technical description of the product

Object of this European Technical Assessment are the fischer channel FUS 21/1,5, FUS 21/2,0, FUS 21/2,5, FUS 41/1,5, FUS 41/2,0, FUS 41/2,5, FUS 62/2,5, FUS 21D/2,0, FUS 41D/2,5 and FUS 62D/2,5.

The fischer channels FUS consist of thin-walled steel with parallel flanges and a connecting web. The flanges are turned at the end. The flanges of the channels FUS 21/1,5, FUS 21/2,0, FUS 41/1,5 and FUS 41/2,0 are designed with a linear dent. The turned flange ends are designed with a serration which makes it possible to force-fit the channels to specific channel system fixtures. The fischer channels FUS 21D/2,0, FUS 41D/2,5 and FUS 62D/2,5 consists of two identical fischer channels FUS 21/2,0, FUS 41/2,5 respectively FUS 62/2,5, attached on the web's back and connected by spot welding. Recesses in the web of the channels (channel back) in the form of slotted holes allow the use of fasteners and fixtures. The fischer channels are delivered in lengths from 0,05 m up to 6,00 m with modular dimension of 0,05 m.

Annex A describes the dimensions and materials of the fischer channels FUS 21/1,5, FUS 21/2,0, FUS 21/2,5, FUS 41/1,5, FUS 41/2,0, FUS 41/2,5 and FUS 62/2,5.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document (EAD)

The performance given in Section 3 can only be assumed if the fischer channel FUS 21/1,5, FUS 21/2,0, FUS 21/2,5, FUS 41/1,5, FUS 41/2,0, FUS 41/2,5, FUS 62/2,5, FUS 21D/2,0, FUS 41D/2,5 and FUS 62D/2,5 are used in compliance with the specifications and under boundary conditions set out in Annex B.

The test and assessment methods on which this European Technical Assessment is based lead to an assumption of a working life of the fischer channel FUS 21/1,5, FUS 21/2,0, FUS 21/2,5, FUS 41/1,5, FUS 41/2,0, FUS 41/2,5, FUS 62/2,5, FUS 21D/2,0, FUS 41D/2,5 and FUS 62D/2,5 of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

In accordance with the European Assessment Document EAD 280016-00-0602, the product is intended to be used in dry indoor conditions for supporting:

- pipes for the transport of water not intended for human consumption,
- pipes for the transport of gas/fuel intended for the supply of building heating/cooling systems,
- technical building equipment in general,
- components of fixed fire-fighting systems.

The product is intended to be used where failure or excessive deformation of the installation systems would

- compromise safety in case of fire (BWR 2) or
- would lead to an unacceptable risk of accidents or damage in service or in operation (BWR 4).

**3 Performance of the product and references to the methods used for its assessment****3.1 Safety in case of fire (BWR 2)**

| Essential characteristic                                     | Performance       |
|--|-------------------|
| Reaction to fire:  | Class A1          |
| Pull-through resistance of channel holes under fire exposure | see Annex D1      |
| Bending characteristics under fire exposure                  | see Annex D2 – D9 |

**3.2 Safety and accessibility in use (BWR 4)**

| Essential characteristic                                | Performance       |
|---|-------------------|
| Cross-section characteristics                           | see Annex C1 – C5 |
| Characteristic pull-through resistance of channel holes | see Annex C6      |

**4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

In accordance with the European Assessment Document EAD 280016-00-0602 the applicable European legal act is:

For products for installation systems intended to be used for supporting pipes for the transport of water not intended for human consumption the applicable European legal act is Commission Decision 1999/472/EC, as amended by Commission Decision 2001/596/EC.

The system to be applied is 4. This includes uses that are subject to regulations on reaction to fire performance because the performance of the product is class A1 without the need to be tested for reaction to fire.

For products for installation systems intended to be used for supporting pipes for the transport of gas/fuel intended for the supply of building heating/cooling systems the applicable European legal act is Commission Decision 1999/472/EC, as amended by Commission Decision 2001/596/EC.

The system to be applied is 3.

For products for installation systems intended to be used for supporting technical building equipment in general the applicable European legal act is Commission Decision 97/161/EC.

The system to be applied is 2+.

For products for installation systems intended to be used for supporting components of fixed fire-fighting systems the applicable European legal act is Commission Decision 96/577/EC, as amended by Commission Decision 2002/592/EC.

The system to be applied is 1.

**5      Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document**

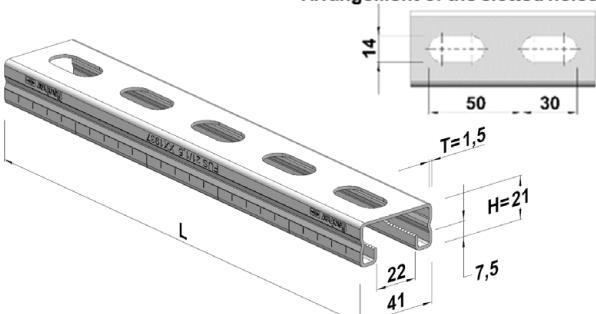

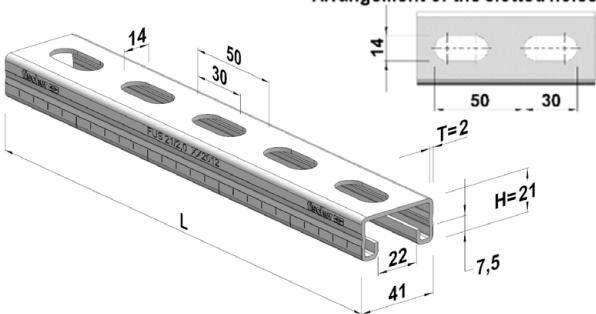

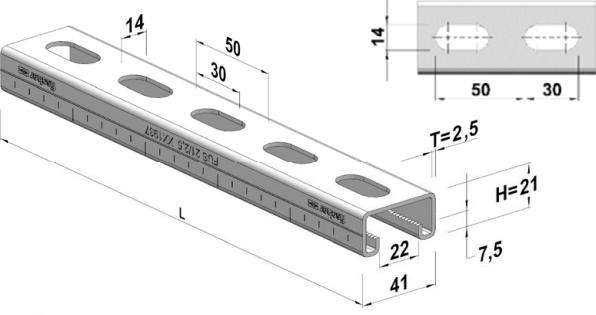

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

#### Product description

Shape, dimension and materials

**Annex A4**

### Requirements for performance calculation of the channels FUS

- fischer channels FUS are used for load transfer of components of technical building equipment such as pipes and equipment for sprinkler, water, heating, cooling, ventilation, electrical and other installations.
- fischer channels FUS are used in installation systems for technical building equipment at ambient temperature and under fire exposure. The use of fischer channels FUS 21D, FUS 41D and FUS 62D within the scope of this European Technical Assessment is only under conditions at ambient temperature.
- The data on resistances and deformations at ambient temperature and under fire exposure apply to static and centric loads. The time data in connection with the resistance and deformation values under the influence of fire refer to the boundary conditions of the standard temperature/time curve (STTC) according to EN 1363-1:2020.
- Channels FUS mounted directly on the ceiling are installed with the channel profile open at the bottom. Fire-protection approved components on the underside are fastened with fischer saddle nut FCN Clix M10, FCN Clix M12, FCN Clix P10 or FCN Clix P12. For applications under fire exposure, the channels are anchored in the substrate with fischer drilled plate HK 41 10,5 or HK 41 12,5 in conjunction with suitable fixing elements. For applications at ambient temperature, the FUS channels can be anchored to the substrate without using the drilled plates HK 41 10,5 or HK 41 12,5 with suitable fixing elements through the slotted holes in the channels.
- For suspended channel systems, the channel profiles are installed with an opening at the top or bottom. Fire-protection approved components mounted on the top or bottom of suspended channel systems must be fixed in place using fischer drilled plates HK 41 10,5 or HK 41 12,5 on both sides and nuts and threaded rods. Alternatively, the installation with fischer saddle nuts FCN-Clix M10 or FCN-Clix M12 is possible. The joint between the channel and the threaded rod for suspending the system is made with fischer drilled plate HK 41 on both sides and nuts and threaded rods which are connected non-positively.
- Threaded rods and other attachments may only be guided through unsawn long back (slotted) holes in the channel.
- The fastening elements for anchoring in the base material must be suitable for this purpose and have a fire protection certificate.
- Before installation, it must be ensured that
  - the components to be carried by the channel,
  - the mounting parts,
  - the anchoring of the channels on and in the substrate and
  - the substrate itself

are within the permissible load range until the evaluated channel fails. In the range of loads from the standard temperature curve according to EN 1363-1:2020, the components must have a fire protection certificate that is at least equivalent to that of the evaluated channel.

**Continuation of the requirements for the performance calculation of the channels FUS**

- Installation must be carried out by appropriately trained personnel under the supervision of the site manager. When attaching the channel FUS to the substrate and when mounting attachments to the channel FUS, the general manufacturer's mounting instructions for attachments and fasteners must be observed.
- The performance with regard to the pull-through resistance through the channel back (slotted) holes at ambient temperature and under fire exposure is obtained in conjunction with the fastening elements according to Table B 4.1.

**fischer channel FUS 21/1,5, FUS 21/2,0, FUS 21/2,5, FUS 41/1,5, FUS 41/2,0,

**Components for attaching the channels FUS directly to the base material through the channel back (slotted) holes**

The following illustration shows how the channels FUS are fastened directly to the substrate through the channel back (slotted) holes. The numbering refers to Table B 4.1. Fastening elements according to Table B 4.1 or fastening elements whose contact surface and dimensions are the same or larger than the rated fastening elements in Table B 4.1 are approved for fastening the channel FUS directly through the channel back (slotted) holes. In addition, the yield point and the tensile strength must be equal to or greater than the rated fastening elements.

**Intended use**  
Components for attaching the channel

**Annex B4**

### Consideration of the evaluated cross-sectional profile of the channels FUS for the area calculation

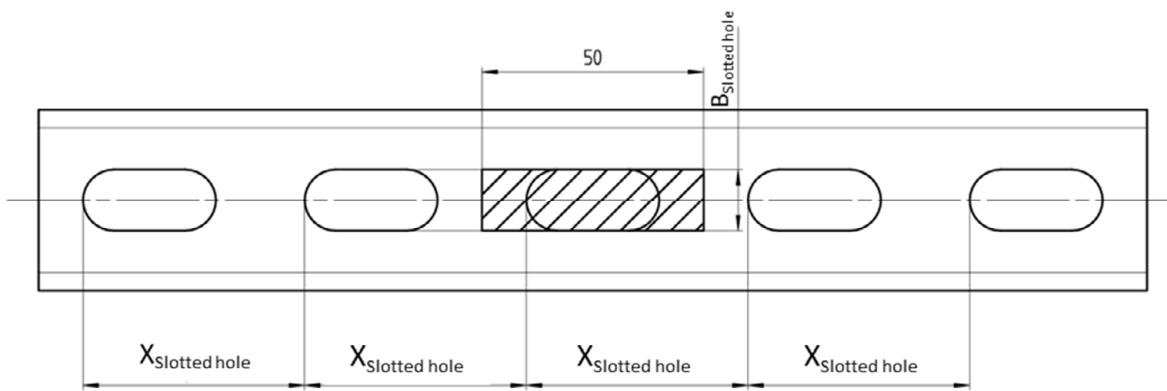

Due to the inhomogeneity of the cross-section of the channels FUS, the cross-section values for each channel are calculated in the averaged cross-section profile of the channels FUS (see Table B 5.1, No. 3). The averaged cross-sectional profile is calculated based on the cross-sectional profile in the back (slotted) hole of the channel and the cross-section outside the back (slotted) hole of the channel (see Table B 5.1, No. 1 and No. 2). The pictures of the cross-sectional profiles refer to the channel FUS 21/1,5 as an example.

**Table B 5.1: Designation of the cross-section profiles, explanation exemplary based on channel FUS 21/1,5**

| Number | Designation                                    | Picture of the cross-section profile<br>(Dimensions in mm) |
|--------|--|--|
| 1      | Cross section in back (slotted) holes          |  |
| 2      | Cross section outside the back (slotted) holes |  |
| 3      | Averaged cross-section                         |  |

For the channel FUS 41/2,5, the calculation of the averaged cross-sectional profile is based on the parameters in Figure B 5.1 and Figure B 6.1 as shown in Annex C2

**Figure B 5.1: Parameters for the calculation of the averaged cross-sectional profile**

**fischer channel FUS 21/1,5, FUS 21/2,0, FUS 21/2,5, FUS 41/1,5, FUS 41/2,0,  
FUS 41/2,5, FUS 62/2,5, FUS 21D/2,0, FUS 41D/2,5 and FUS 62D/2,5**

#### Performance

Consideration of the evaluated cross-sectional profile of the channels FUS for the area calculation

**Annex C1**

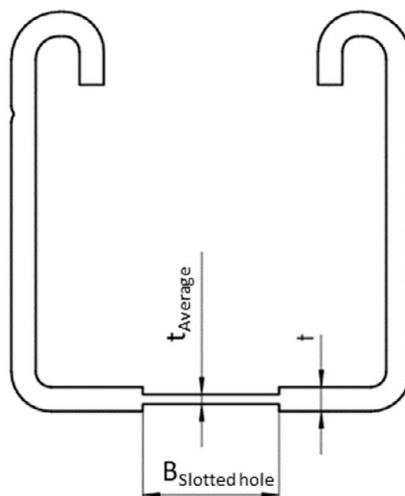

**Continuation of the consideration of the evaluated cross-sectional profile of the channels FUS for the area calculation**

The averaged material thickness  $t_{\text{Average}}$  results from the equations Eq. B 6.1 and Eq. B 6.2. Figure B 6.1 shows the parameters in the averaged cross-sectional profile. The units of the parameters are shown in Table B 6.1

$$A_{\text{Extract}} = B_{\text{Slotted hole}} * X_{\text{Slotted hole}} \quad [\text{mm}^2] \quad \text{Eq. B 6.1}$$

$$t_{\text{Average}} = t * \left(1 - \frac{A_{\text{Slotted hole}}}{A_{\text{Extract}}}\right) \quad [\text{mm}] \quad \text{Eq. B 6.2}$$

**Figure B 6.1: Parameters in the averaged cross-sectional profile of the FUS channel**

**Table B 6.1: Units of the parameters**

| Designation of the parameters                              | Parameter                 | Unit          |
|--|---------------------------|---------------|
| Standard wall thickness                                    | $t$                       | mm            |
| Width of the slotted holes                                 | $B_{\text{Slotted hole}}$ | mm            |
| Distance between the slotted holes                         | $X_{\text{Slotted hole}}$ | mm            |
| Cross sectional area of the slotted holes of the FUS41/2,5 | $A_{\text{Slotted hole}}$ | $\text{mm}^2$ |
| Cross sectional area of the channel extract                | $A_{\text{Extract}}$      | $\text{mm}^2$ |
| Averaged wall thickness                                    | $t_{\text{Average}}$      | mm            |

The properties of the averaged cross-section profile are shown in Table B 7.1 and B 9.1

**fischer channel FUS 21/1,5, FUS 21/2,0, FUS 21/2,5, FUS 41/1,5, FUS 41/2,0, FUS 41/2,5, FUS 62/2,5, FUS 21D/2,0, FUS 41D/2,5 and FUS 62D/2,5**

**Performance**

#### Performance

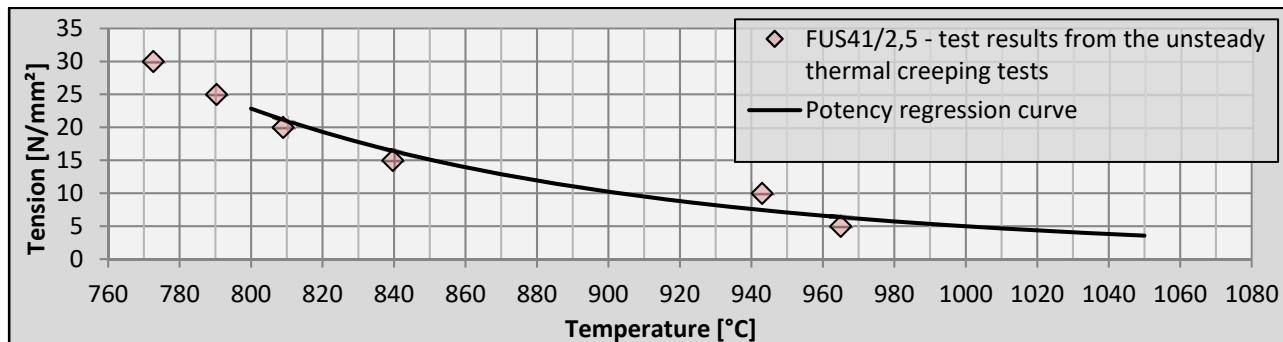

Pull-through resistance of channel back holes under fire exposure

#### Annex D1

**Tensile stress behavior of the channels FUS at variable component temperature and constant channel deformation  $\epsilon_{B,0a} = 2 \%$**

On the basis of unsteady thermal creep tests, material samples of the channels FUS were loaded with tensile stresses of 5 N/mm<sup>2</sup> to 30 N/mm<sup>2</sup> with a step size of 5 N/mm<sup>2</sup> under the load of the standard temperature/time curve. The test was carried out according to EN ISO 6892-2:2018. The temperature was determined at which an elastic elongation of  $\epsilon_{B,0a} = 2 \%$  of the material sample of the channels FUS under the load of tensile stresses from 5 to 30 N/mm<sup>2</sup> was obtained. The results of the study are shown in Figure D 2.1.

**Figure D 2.1: Results of the unsteady thermal creep tests**

Based on the potency regression curve calculated in Figure D 2.1, Table D 2.1 shows the permissible material stresses in the channel material of the channels FUS to the relevant design temperatures in case of fire.

**Table D 2.1: Tensile stresses determined by unsteady creep tests in the channel material at different component temperatures and constant elastic channel elongation with  $\epsilon_{B,0a} = 2 \%$**

### Legend of the coefficients of Tables D 4 to D 9

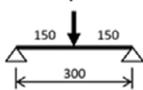

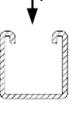

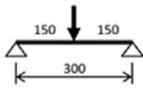

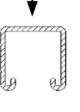

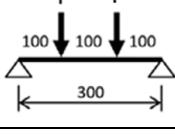

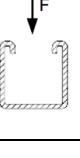

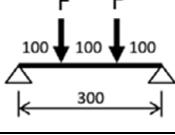

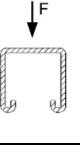

The stress-strain dependencies required for the FEM simulation for temperatures from 800 °C to 1050 °C can be derived from the test results of Annex D 2. Table D 3.1 describes the evaluation parameters. Tables D 4.1 to D 9.1 list the resulting strains of channels FUS under the thermal load of the standard temperature/time curve and the mechanical bending stress of 5 to 20 N/mm<sup>2</sup>.

**Table D 3.1: Designations of the coefficients of Tables D 4.1 to D 9.1**

| Coefficient   | Unit                 | Designation  |       |      |       |       |      |      |      |       |   |   |   |   |    |    |              |     |     |     |     |       |       |

<sup>1)</sup> Moment fullness without share from channel own weight

<sup>2)</sup> Size of each individual load of the designated system

**fischer channel FUS 21/1,5, FUS 21/2,0, FUS 21/2,5, FUS 41/1,5, FUS 41/2,0, FUS 41/2,5, FUS 62/2,5, FUS 21D/2,0, FUS 41D/2,5 and FUS 62D/2,5**

**Performance**  
Deflections channel FUS 41/2,5 under fire exposure  
clamping range = 1300 mm

**Annex D9**

Tables E 1.1 to E 3.1 show the main installation conditions of the channels FUS for fire-resistant systems under the fire load of the standard temperature/time curve according to EN 1363 1:2020. Tables E 1.1 to E 3.1 also list all necessary components of the system. Here, the system with a centrally mounted pipe clamp is always considered.
