The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The Fasteners (Concrete Nails) NB-25, NB-32, NB-38 are power-actuated fasteners which are placed into the concrete without previous drill by use of a power actuated tool GNB 18V-38 and GNB 18V-40. They are anchored in the concrete by sintering and mechanical interlock.

The fastener (nail) is made of galvanised steel. The nails are arranged and connected with each other by special plastic strips that guides the nails in the gas actuated tool magazine.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the fastener is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the fastener of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance	
Characteristic values of resistance and displacements	See Annex B2 and C1	
Durability	See Annex B1	

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance		
Reaction to fire	Class A1		
Resistance to fire	No performance assessed		

Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with EAD No. 330083-02-0601, the applicable European legal act is: 1997/463/EC (EU).

The system to be applied is: 2+

Z64413.22 8.06.01-109/22

European Technical Assessment ETA-22/0338 English translation prepared by DIBt

Page 4 of 10 | 10 August 2022

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

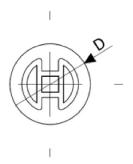

Issued in Berlin on 10 August 2022 by Deutsches Institut für Bautechnik

Installed condition:

Fasteners (Concrete Nails) NB-25, NB-32, NB-38

Description of Product

Annex A 1

English translation prepared by DIBt

Specification of Intended use

Anchorages are subject to:

Static and quasi-static loads

Base materials:

- Reinforced or unreinforced normal weight concrete according to EN 206-1:2000
- Strength classes C20/25 to C50/60 according to EN 206-1:2000
- · For cracked and non-cracked concrete

Use conditions (Environmental conditions):

• Structures subject to dry internal conditions.

Design

Electronic copy of the ETA by DIBt: ETA-22/0338

- Verifiable calculation notes and drawings shall be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the drawings (e.g. position of the fastener relative to reinforcement or to supports etc.).
- The anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work
- The anchorages are designed in accordance with EN 1992-4:2018, Design Method C
- The fasteners may only be used for multiple fastening of non-structural systems with the following definition:

Number of fixing points $n_1 \ge 6$,

Number of fasteners per fixing point $n_2 = 1$,

Design value of actions F_{Ed} per fixing point $n_3 \le 0.3$ kN.

• The design of the fixture is such that in case of excessive slip or failure of one fastener, the load can be transmitted to neighboring fasteners without significantly violating the requirements on the fixture in serviceability and ultimate limit state.

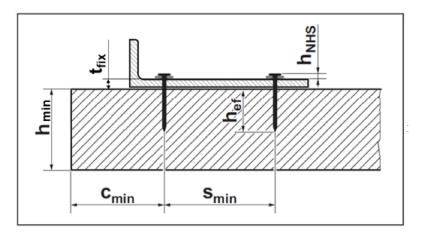

Fasteners (Concrete Nails) NB-25, NB-32, NB-38	
Intended use	Annex B1

Table B2.1: Installation Parameters

Minimum and maximum thickness of the fixtures for NB nails.					
		NB-25 nails	NB-32 nails	NB-38 nails	
Length of nails L		25	32	38	
Effective anchorage depth hef		≥ 15	≥ 15	≥ 15	
Average anchorage depth when used in maximum concrete strength class hef,m	[mm]	20,5	20,5	20,5	
Thickness fixture min. t _{fix,min}		2	5	11	
Thickness fixture max. t _{fix,max}		4	11	17	
Head stand-off hынs		≤ 10 - t _{fix}	≤ 17 - t _{fix}	≤ 23 - t _{fix}	
Membe	er thickne	ess, spacing and e	edge distances		
Minimum member thickness hmin		80			
Minimum spacing s _{min}	[mm]	200 150			
Minimum edge distance _{Cmin}					

To ensure the required embedment depth $h_{\text{ef}} > 15$ mm the maximum nail head stand-off h_{NHS} listed in Table B2.1 must be checked during installation. The nail head stand-off h_{NHS} is defined as distance between the nail head and the surface of the fixture. If the value h_{NHS} is exceeded the nail must be considered as setting defect.

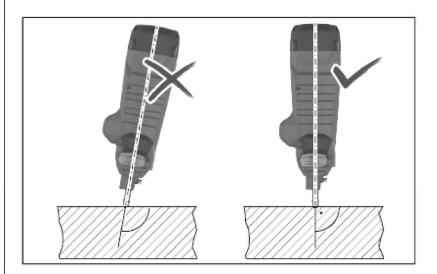

Fasteners (Concrete Nails) NB-25, NB-32, NB-38	
Installation parameters	Annex B 2

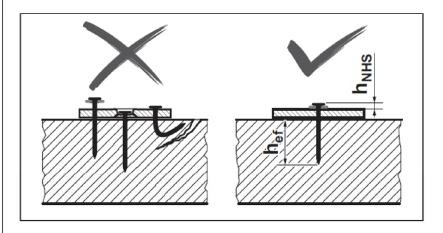

Installation instructions

- Fastener installation in accordance with the manufacturer's specifications and drawings and using the specified installation device.
- Installation to be carried out by appropriately qualified personnel and under supervision of the responsible person for technical matters of the job-site.
- · Fasteners to be installed perpendicular to base material.

- Control for failed fasteners (e.g. too high, too low, bend fastener through contact with hard aggregate).
- Fasteners to be installed ensuring not less than the minimum effective anchorage depth of 15 mm. If the embedment depth is smaller than the minimum effective anchorage depth the nail must be assumed as a setting defect and it must not be loaded.
- Damaged concrete surface by failed settings to be repaired according to EN 1504-3:2005.
- Failed fasteners to be replaced by new fastener >150mm distanced from damaged area.

- Make sure that required effective anchorage length, her stated in Annex B 2 is met.
- Make sure that required nail head stand-off, h_{NHS} stated in Annex B 2 is met.
- Use appropriate fastening tool like stated in Annex B 4.
