ETA-13/0183 issued on 1 June 2022

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

**Specific part****1 Technical description of the product**

The fastening screws are self-drilling or self-tapping screws made of austenitic stainless steel or carbon steel with anticorrosion coating (listed in Table 1). The fastening screws are completed with sealing washers consisting of metal washer and EPDM-seal.

**Table 1 – Fastening screws for sandwich panels**

**European Technical Assessment**

ETA-13/0183

Page 5 of 41 | 6 September 2023

English translation prepared by DIBt

**2 Specification of the intended use in accordance with the applicable European Assessment Document**

The fastening screws are intended to be used for fastening sandwich panels to metal or timber substructures. The sandwich panel can either be used as wall or roof cladding or as load bearing wall and roof element. The intended use comprises fastening screws and connections for indoor and outdoor applications. Fastening screws which are intended to be used in external environments with  $\geq C2$  corrosion according to the standard EN ISO 12944-2 are made of stainless steel. Furthermore the intended use comprises connections with predominantly static loads (e.g. wind loads, dead loads). The fastening screws are not intended for re-use.

The performances given in Section 3 are only valid if the fastening screws are used in compliance with the specifications and conditions given in Annex (1-35).

The verification and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the fastening screws of at least 25 years. The indications given on the working life cannot be interpreted as a guarantee given by the manufacturer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

**3 Performance of the product and references to the methods used for its assessment****3.1 Mechanical resistance and stability (BWR 1)**

Essential characteristic	Performance
Shear Resistance of the Connection	see Annexes to this ETA
Tension Resistance of the Connection	see Annexes to this ETA
Design Resistance in combination of tension and shear forces (interaction)	see Annexes to this ETA
Check of Bending Capacity in case of constraining forces due to temperature	see Annexes to this ETA
Durability	No performance assessed

**3.2 Safety in case of fire (BWR 2)**

Essential characteristic	Performance
Reaction to fire	Class A1

**4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

In accordance with EAD 330047-01-0602, the applicable European legal act is:

Commission Decision 98/214/EC, amended by 2001/596/EC.

The system to be applied is: 2+

### Examples of connections

### Description of the components

- Component I Sandwich panel with outer and inner skin made of steel  
Component II Substructure made of steel or timber

### Dimensions of the components

- $t_I$  Nominal thickness of sandwich panel  
 $t_{N1}$  Nominal thickness of sandwich panel outer skin  
 $t_{N2}$  Nominal thickness of sandwich panel inner skin  
 $t_{II}$  Nominal thickness of steel substructure  
 $l_{ef}$  Screw-in length in timber substructure (without drill point or thread point)  
 $d_{dp}$  Pre-drill diameter of the connection

### Assessed performance characteristics

- $N_{R,k}$  Characteristic value of tension resistance of the connection  
 $V_{R,k}$  Characteristic value of shear resistance of the connection  
 $u$  Bending capacity of the fastening screw  
  
 $V_{R,I,k}$  Characteristic value of hole bearing resistance of the sandwich panel inner skin  
 $N_{R,I,k}$  Characteristic value of pull-through resistance of the sandwich panel outer skin  
 $N_{R,II,k}$  Characteristic value of pull-out resistance of the substructure  
 $f_{ax,k}$  Characteristic value of withdrawal strength of the fastening screw  
 $M_{y,Rk}$  Characteristic value of yield moment of the fastening screw

### Fastening screws for sandwich panels

Basics

Annex 1

### Assessment of performance characteristics

The declared performance characteristics have been assessed according to EAD 330046-01-0602.

The characteristic value of tension resistance of a connection ( $N_{R,k}$ ) results from the minimum of the tension resistance of the fastening screw ( $N_{screw}$ ), the pull-through resistance of the sandwich panel outer skin ( $N_{R,I,k}$ ) and the pull-out resistance of the substructure ( $N_{R,II,k}$ ). The pull-through resistance includes a reduction factor 2/3 to take the influence of repeated wind loads into account.

$$N_{Rk} = \min\{N_{screw}; N_{R,I,k}; N_{R,II,k}\}$$

The characteristic value of shear resistance of a connection ( $V_{R,k}$ ) results from the minimum of the shear resistance of the fastening screw ( $V_{screw}$ ) and the shear resistance of the connection between sandwich panel inner skin and substructure ( $V_{R,I/II,k}$ ).

$$V_{Rk} = \min\{V_{screw}; V_{R,I/II,k}\}$$

The characteristic values consider minimum thicknesses of the declared nominal thicknesses ( $t_{N1}, t_{N2}, t_{II}$ ) according to the following table:

Nominal thickness [mm]	Minimum thickness [mm]						
0.40	0.33	0.70	0.62	2.00	1.87	8.00	6.80
0.45	0.38	0.75	0.67	2.50	2.36	10.00	8.50
0.50	0.42	0.88	0.79	3.00	2.85	12.00	10.20
0.55	0.47	1.00	0.91	4.00	3.40		
0.60	0.52	1.25	1.13	5.00	4.25		
0.63	0.55	1.50	1.38	6.00	5.10		

The characteristic values consider a minimum tensile strength of 360 N/mm<sup>2</sup> of the declared steel materials (S280GD or S235) resp. the minimum density of 350 kg/m<sup>3</sup> of the declared timber materials (C24).

Characteristic values for component thicknesses ( $t_{N1}, t_{N2}, t_{II}$ ) or screw-in lengths ( $l_{ef}$ ) that are between two declared component thicknesses or screw-in lengths may be determined by linear interpolation.

The characteristic values may be applied for further steel materials according to EN 1993-1-1 (table 3.1) and EN 1993-1-3 (table 3.1) as long as the material properties corresponds to the declared materials.

The bending capacity of the fastening screw ( $u$ ) describes the maximum allowed displacement of the screw head caused by thermal expansions of sandwich panels.

### Fastening screws for sandwich panels

Basics

Annex 2

### Recommendation for design values

Provisions for the design of a connection are given in Eurocode 0 (EN 1990: Basis of structural design), Eurocode 3 (EN 1993: Design of steel structures) and Eurocode 5 (EN 1995: Design of timber structures).

The design value of tension and shear resistance of a connection ( $N_{R,d}$  resp.  $V_{R,d}$ ) shall be determined by taking into account a partial safety factor ( $\gamma_M$ ). Recommended is  $\gamma_M = 1.33$  unless otherwise stated in National Regulations or National Annexes of Eurocode 0, Eurocode 3 or Eurocode 5.

$$N_{R,d} = \frac{N_{R,k}}{\gamma_M} \quad V_{R,d} = \frac{V_{R,k}}{\gamma_M}$$

Application specific conditions shall be taken into account:

- In case of combined tension and shear load of a connection, the condition according to EN 1993-1-3 (equation 8.2) shall be fulfilled.
- In case of timber substructure, a modification factor ( $k_{mod}$ ) according to EN 1995-1-1 (table 3.1) shall be applied at pull-out resistance ( $N_{R,II,k}$ ).
- In case of eccentric fastening of sandwich panels or asymmetrical steel substructure, a reduction of tension resistance ( $N_{R,k}$ ) according to EN 1090-4 (section B.5) and EN 1993-1-3 (section 8.3) shall be applied.
- In case of hidden fastening of sandwich panels with load distribution plate, the pull-through resistance ( $N_{R,I,k}$ ) declared in sandwich panel approvals may be applied.

Thermal expansions of sandwich panels may not exceed the bending capacity of the fastening screw (u).

### Installation requirements

The installation has to be carried out according to the manufacturer's instructions.

Installation instructions given in corresponding European Standards shall be taken into account:

- Requirements on the installation of fastening screws are given in EN 1090-2 (section 8.8) and EN 1090-4 (section 8.1 and 8.2).
- Requirements on minimum distances between fastening screws and minimum distances to component edges and ends are given in EN 1090-4 (section 8.7), EN 1993-1-3 (section 8.3) and EN 1995-1-1 (section 8.7).
- Requirements on the minimum screw-in depth in steel substructure are given in EN 1090-4 (section 8.5).
