The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Page 3 of 14 | 28 August 2025

Specific Part

1 Technical description of the product

The MULTI-MONTI screw anchor MMS is an anchor in size 7,5, 10, 12, 14 and 16 mm made of galvanized steel. The anchor is screwed into a predrilled cylindrical drill hole. The special thread of the anchor cuts an internal thread into the member while setting. The anchorage is characterised by mechanical interlock in the special thread.

Product and product description are given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

| Essential characteristic | Performance |
|---|-------------------------|
| Characteristic resistance to tension load (static and quasi-static loading) | See Annex B2 and C1 |
| Characteristic resistance to shear load (static and quasi-static loading) | See Annex C1 |
| Displacements (static and quasi-static loading) | See Annex C4 |
| Characteristic resistances and displacements for seismic performance categories C1 and C2 | No performance assessed |

3.2 Safety in case of fire (BWR 2)

| Essential characteristic | Performance |
|--------------------------|---------------------|
| Reaction to fire | Class A1 |
| Resistance to fire | See Annex C2 and C3 |

3.3 Aspects of durability linked with the Basic Works Requirements

| Essential characteristic | Performance | | |
|--------------------------|--------------|--|--|
| Durability | See Annex B1 | | |

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with European Assessment Document EAD No. 330232-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

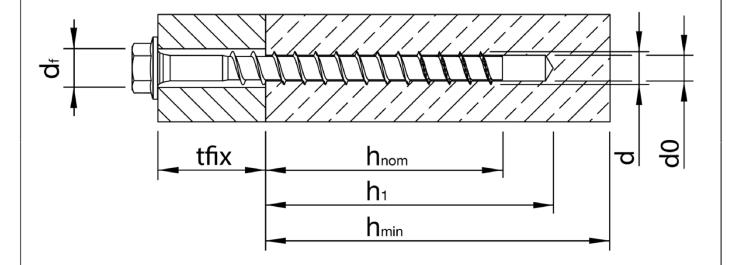

Issued in Berlin on 28 August 2025 by Deutsches Institut für Bautechnik

Dipl.-Ing. Beatrix Wittstock Head of Section beglaubigt:

Product description

Dimensions and head marking

Annex A 3

Specifications of intended use

Use of the anchoring:

- · Static and quasi-static loads: all sizes.
- · Fire exposure: all sizes.

Base Materials:

- · Reinforced or unreinforced normal weight concrete without fibres according to EN 206:2013.
- Strength classes C20/25 to C50/60 according to EN 206:2013.
- · Cracked and uncracked concrete: all sizes.

Use conditions (Environmental conditions):

· Structure subject to dry internal conditions.

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The
 position of the anchor is indicated on the design drawings (e.g. positions of the anchor relative to
 reinforcement or to supports, etc.)
- The designs of the anchoring under static or quasi-static actions and fire exposure have to be carried out in accordance with EN 1992-4:2018 and EOTA Technical Report TR 055, edition 2018.
- The design under shear load according to EN 1992-4:2018, section 6.2.2 applies to all in appendix B2,
 Table B1 specified diameter df of clearance hole in the fixture.

Installation:

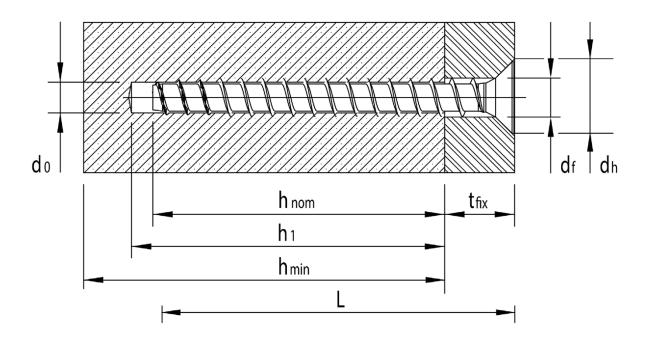

- Hole drilling by hammer drilling or hollow/vacuum drilling.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- The head of the anchor is attached to the fixture and is not damaged, and the required embedment depth is reached.
