European Technical Assessment Body
for construction products

European Technical Assessment

ETA-13/0725
of 7 October 2025

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the
European Technical Assessment:

Deutsches Institut für Bautechnik

Trade name of the construction product

Vorpa frame/multi-purpose anchor VPC

Product family
to which the construction product belongs

Plastic anchor for redundant non-structural systems in
concrete and masonry

Manufacturer

VORPA srl
Via S. Leo 5
47838 Riccione (RN)
ITALIEN

Manufacturing plant

Vorpa Plant 1

This European Technical Assessment
contains

22 pages including 3 annexes which form an integral part
of this assessment

This European Technical Assessment is
issued in accordance with Regulation (EU)
No 305/2011, on the basis of

EAD 330284-00-0604, edition 12/2020

This version replaces

ETA-13/0725 issued on 26 September 2017

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The Vorpa frame/multi-purpose anchor VPC is a plastic anchor consisting of a plastic sleeve made of polyamide and an accompanying specific screw of galvanised steel or of stainless steel. The plastic sleeve is expanded by screwing in the specific screw which presses the sleeve against the wall of the drilled hole.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchors of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C 1

3.2 Mechanical resistance and stability (BWR 4)

Essential characteristic	Performance
Resistance to steel failure under tension loading	See Annex C 1
Resistance to steel failure under shear loading	See Annex C 1
Resistance to pull-out or concrete failure under tension loading (base material group a)	See Annex C 1
Resistance in any load direction without lever arm (base material group b, c, d)	See Annexes C 2 - C 4 and C 9
Edge distance and spacing (base material group a)	See Annex B 2
Edge distance and spacing (base material group b, c, d)	See Annex B 3 - B 5
Displacements under short-term and long-term loading	See Annex C 5 - C 9
Durability	See Annex B 1

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with European Assessment Document EAD 330284-00-0604 the applicable European legal act is: 97/463/EC.

The system to be applied is: 2+

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Issued in Berlin on 7 Oktober 2025 by Deutsches Institut für Bautechnik

Dipl.-Ing. Beatrix Wittstock
Head of Section

beglaubigt:
Ziegler

Intended use:
Fixing in concrete and different types of masonry.

Legend:

h_{min} :	minimum thickness of concrete member
h_{nom} :	minimum overall embedment depth
h_{ef} :	minimum effective embedment depth
d_{nom} :	anchor diameter
l_t :	anchor length
l_v :	screw length
d_0 :	drill hole diameter
h_1 :	minimum depth of drill hole
t_{fix} :	maximum thickness of fixture
d_f :	diameter of clearance hole in the fixture

Anchor types / specific screw – marking and dimensions

Annex A 2

Table 1: Dimensions

Anchor type		VPC Ø 8	VPC Ø 10
Outside diameter of anchor	$d_{nom} = [mm]$	8	10
Length of the anchor	$l_t = [mm]$	≥ 80	
Screw diameter	$d_v = [mm]$	6	7
Screw length	$l_v = [mm]$	≥ 85	≥ 85

Table 2: Materials

Anchor sleeve	Polyamide PA 6, colour: light grey
Carbon steel screw	Carbon Steel grade 5.8, Electroplated coating of zinc minimum 5 μm according to ISO 4042:2022 (hereinafter designated "zinc plated carbon steel")
Stainless steel screw	SS A4/70 according to ISO 3506-1:2020 and EN 10088-3:2014 Corrosion Resistance Class CRC III according to EN 1993-1-4:2006+A1:2015

Vorpa frame/multi-purpose anchor VPC

Product description
Dimensions and materials

Annex A 3

Specifications of intended use

Anchorage subject to:

- Static and quasi-static loads:
- Redundant non-structural systems

Base materials:

- Reinforced or unreinforced compacted normal weight concrete without fibres with strength classes \geq C16/20 (base material group a), according to EN 206:2013 + A1:2016. See Annex C 1.
- Solid brick masonry (base material group b). See Annex C 2.
Note: The characteristic resistance is also valid for larger brick sizes and larger compressive strength of the masonry unit.
- Hollow or perforated brick masonry (base material group c). See Annexes C 3 and C 4.
- Autoclaved aerated concrete (base material group d). See Annex C 9
- Mortar strength class of the masonry \geq M2,5 at minimum according to EN 998-2:2016.
- For other base materials of the base material group a, b, c or d the characteristic resistance of the anchor may be determined by job site tests according to EOTA TR 051:2018-04.

Temperature Range:

- a: - 40 °C to 40 °C (max. short term temperature + 40 °C and max long term temperature + 24 °C)
- b: - 40 °C to 80 °C (max. short term temperature + 80 °C and max long term temperature + 50 °C)

Use conditions (Environmental conditions)

- Structures subject to dry internal conditions: zinc plated carbon steel screws, A4 stainless steel screws.
- The specific screw made of zinc plated carbon steel may also be used in structures subject to external atmospheric exposure, if the area of the head of the screw is protected against moisture and driving rain after mounting of the fixing unit in this way, that intrusion of moisture into the anchor shaft is prevented. Therefore there shall be an external cladding or a ventilated rainscreen mounted in front of the head of the screw and the head of the screw itself shall be coated with a soft plastic, permanently elastic bitumen-oil-combination coating (e. g. undercoating or body cavity protection for cars).
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist: A4 stainless steel screws.
Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

Design:

- The anchorages are designed in accordance with TR 064:2018-05 under the responsibility of an engineer experienced in anchorages and masonry work.
- Verifiable calculation notes and drawings shall be prepared taking account of the loads to be anchored, the nature and strength of the base materials and the dimensions of the anchorage members as well as of the relevant tolerances. The position of the anchor is indicated on the design drawings.

Installation:

- Hole drilling by the drill modes according to Annex C 1, C 2, C 3, C 4, C 9.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Installation temperature \geq 0°C
- Exposure to UV due to solar radiation of the anchor not protected \leq 6 weeks
- No ingress of water in the core hole $<$ 0°C

¹⁾ Intermediate value by linear interpolation

Scheme of edge distance and spacing in concrete and masonry

Fixing points with a spacing $a \leq s_{cr,N}$ are considered as a group with a maximum characteristic resistance $N_{Rk,p}$ according to Table 17. For a spacing $a > s_{cr,N}$ the anchors are considered as single anchors, each with a characteristic resistance $N_{Rk,p}$ according to Table 17.

Tension load in hollow masonry	N	[kN]	1,43	1,57
Displacements	δ_{N0}	[mm]	0,11	0,08
	$\delta_{N\infty}$	[mm]	0,21	0,17

Vorpa frame/multi-purpose anchor VPC

Performances

Displacements under tension load in perforated and hollow brick masonry

Annex C 7

Table 38: Displacements under shear load in perforated brick masonry type "C" and "D"

Parameter / Size			VPC Ø 8	VPC Ø 10
Shear load in hollow masonry	V	[kN]	3,2	4,4
Displacements	δ_{V0}	[mm]	6,40	8,80
	$\delta_{V\infty}$	[mm]	9,60	13,20

Table 39: Displacements under shear load in perforated brick masonry type "G" and "H"

Parameter / Size			VPC Ø 8	VPC Ø 10
Shear load in hollow masonry	V	[kN]	0,26	0,26
Displacements	δ_{V0}	[mm]	0,21	0,21
	$\delta_{V\infty}$	[mm]	0,32	0,32

Table 40: Displacements under shear load in hollow brick masonry type "I"

Parameter / Size			VPC Ø 8	VPC Ø 10
Shear load in hollow masonry	V	[kN]	1,43	1,57
Displacements	δ_{V0}	[mm]	1,19	1,31
	$\delta_{V\infty}$	[mm]	1,79	1,96

Vorpa frame/multi-purpose anchor VPC

Performances

Displacements under shear load in perforated and hollow brick masonry

Annex C 8

Table 41: Characteristic resistance in autoclaved aerated concrete (base material group "d")

Base material	Drill method	Bulk density ρ	Mean compressive strength as per EN 771 $f_{cm,decl}$	VPC $\varnothing 8$ F_{Rk}	VPC $\varnothing 10$ F_{Rk}
description	-	[kg/dm ³]	[N/mm ²]	[kN]	[kN]
Uncracked autoclaved aerated concrete blocks EN 771-4:2011+A1:2015	Rotary only	0,5	3,5	0,5	0,6

Table 42: Displacements under tension load in autoclaved aerated concrete

Parameter / Size			VPC $\varnothing 8$	VPC $\varnothing 10$
Tension load	N	[kN]	0,18	0,21
Displacements	δ_{N0}	[mm]	0,01	0,01
	$\delta_{N\infty}$	[mm]	0,02	0,02

Table 43: Displacements under shear load in autoclaved aerated concrete

Parameter / Size			VPC $\varnothing 8$	VPC $\varnothing 10$
Shear load	V	[kN]	0,18	0,21
Displacements	δ_{V0}	[mm]	0,36	0,43
	$\delta_{V\infty}$	[mm]	0,54	0,64

Vorpa frame/multi-purpose anchor VPC

Performances

Characteristic resistance and displacements for use in autoclaved aerated concrete

Annex C 9
