for construction products

European Technical Assessment

ETA-16/0018
of 10 November 2025

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the
European Technical Assessment:

Deutsches Institut für Bautechnik

Trade name of the construction product

Chemofast Injection system UM-H for concrete

Product family
to which the construction product belongs

Bonded fasteners and bonded expansion fasteners for
use in concrete
(Alternative drilling methods, seismic and fire in steel fibre
reinforced concrete, variable working life, time-to-failure
assessment)

Manufacturer

CHEMOFAST Anchoring GmbH
Hanns-Martin-Schleyer-Straße 23
47877 Willich
DEUTSCHLAND

Manufacturing plant

CHEMOFAST Anchoring GmbH

This European Technical Assessment
contains

43 pages including 3 annexes which form an integral part
of this assessment

This European Technical Assessment is
issued in accordance with Regulation (EU)
No 305/2011, on the basis of

EAD 330499-02-0601-v01, Edition 12/2024

This version replaces

ETA-16/0018 issued on 16 May 2025

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The "Chemofast Injection system UM-H for concrete" is a bonded anchor consisting of a cartridge with Chemofast injection mortar UM-H and a steel element according to Annex A 3 to A 5.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life according to Annex B2, use conditions. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex C 1 to C 4, C 6 to C 7, C 9 to C 10, B 3
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 1, C 5, C 8, C 11
Displacements under short-term and long-term loading	See Annex C 12 to C 14
Characteristic resistance and displacements for seismic performance categories C1 and C2	See Annex C 15 to C 23

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C 24 to C 26

3.3 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with EAD 330499-02-0601-v01 the applicable European legal act is: [96/582/EC].
The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

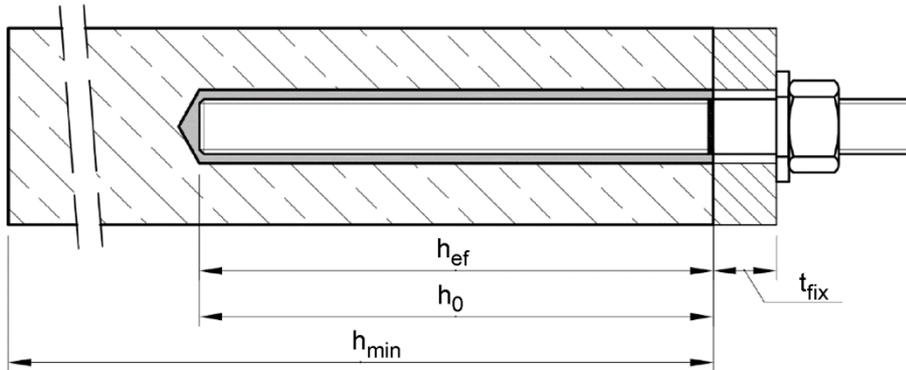

Issued in Berlin on 10 November 2025 by Deutsches Institut für Bautechnik

Dipl.-Ing. Beatrix Wittstock

Product description
Installed condition

Annex A 1

Cartridge system

Coaxial Cartridge:

150 ml, 280 ml, 300 ml up to 333 ml and 380 ml up to 420 ml

Imprint: UM-H

Processing and safety instructions, shelf life, charge number, manufacturer's information, quantity information

Side-by-Side Cartridge:

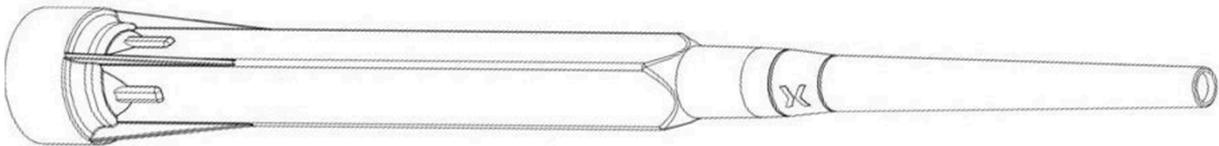

235 ml, 345 ml up to 360 ml and 825 ml

Imprint: UM-H

Processing and safety instructions, shelf life, charge number, manufacturer's information, quantity information

Static mixer PM-19E

Piston plug VS and mixer extension VL

Chemofast Injection system UM-H for concrete

Product description
Injection system

Annex A 2

Threaded rod M8 up to M30 with washer and hexagon nut

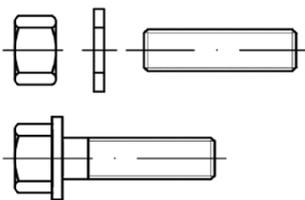

Commercial standard rod with:

- Materials, dimensions and mechanical properties acc. to Table A1
- Inspection certificate 3.1 acc. to EN 10204:2004. The document shall be stored.
- Marking of embedment depth

For hot dip galvanized elements, the requirements with regards to the combination of nuts and rods according to EN ISO 10684:2004+AC:2009 Annex F shall be considered.

Internal threaded rod IG-M6 to IG-M20

Threaded rod or screw

Producer marking: e.g.

M8

Marking Internal thread

Mark

M8 Thread size (Internal thread)

A4 additional mark for stainless steel

HCR additional mark for high-corrosion resistance steel

Filling washer VFS

Mixer reduction nozzle MR

Chemofast Injection system UM-H for concrete

Chemofast Injection system UM-H for concrete				Annex B 1
Intended use Specifications				

Base materials:

- Compacted, reinforced or unreinforced normal weight concrete without fibres according to EN 206:2013 + A2:2021.
- Strength classes C20/25 to C90/105 according to EN 206:2013 + A2:2021.

Use conditions (Environmental conditions):

For working life for at least 50 and / or 100 years

- Structures subject to dry internal conditions (all materials).
- For all other conditions according to EN 1993-1-4:2006 + A1:2015 corresponding to corrosion resistance class:
 - Stainless steel Stahl A2 according to Annex A 4, Table A1: CRC II
 - Stainless steel Stahl A4 according to Annex A 4, Table A1: CRC III
 - High corrosion resistance steel HCR according to Annex A 4, Table A1: CRC V

For variable working life

- Structures subject to internal and external conditions: Classification of atmospheric corrosivity, determination and estimation C1-CX according to EN ISO 9223:2012-02 Table C.1 for a variable working life according to Table B1.
 - Carbon steel, hot dip galvanized according to EN ISO 10684:2004 + AC:2009 with mean thickness $\geq 50 \mu\text{m}$

Table B1: Variable working life

Corrosivity category ¹⁾	Corrosivity	Working life (years)
C1	Very low	50
C2	Low	50
C3	Medium	25
C4	High	12,5
C5	Very High	5
CX	Extreme	2

¹⁾ Corrosivity categories according to EN ISO 9233:2012-02, Table C.1

Design:

- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e. g. position of the fastener relative to reinforcement or to supports, etc.).
- Fasteners are designed under the responsibility of an engineer experienced in fasteners and concrete work.
- The fasteners are designed in accordance to EN 1992-4:2018 and Technical Report TR 055, Edition February 2018
- The fasteners under fire exposure are designed in accordance to Technical Report TR 082, Edition June 2023.

Installation:

- Dry, wet concrete or flooded bore holes (not sea-water).
- Hole drilling by hammer (HD), hollow (HDB) or compressed air (CD).
- Overhead installation allowed.
- Fastener installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Installation temperature in concrete:
-5°C up to +40°C for the standard variation of temperature after installation.

Annex B 5

Installation instructions

Drilling of the bore hole

1a. Hammer drilling (HD) / Compressed air drilling (CD)

Drill a hole to the required embedment depth.
Drill bit diameter according to Table B2, B3 or B4.
Aborted drill holes shall be filled with mortar.
Proceed with Step 2 (MAC or CAC).

1b. Hollow drill bit system (HDB) (see Annex B 4)

Drill a hole to the required embedment depth.
Drill bit diameter according to Table B2, B3 or B4.
The hollow drilling system removes the dust and cleans the bore hole.
Proceed with Step 3.

Attention! Standing water in the bore hole must be removed before cleaning.

Manual Air Cleaning (MAC)

for bore hole diameter $d_0 \leq 20\text{mm}$ and bore hole depth $h_0 \leq 10d_{\text{nom}}$ (uncracked concrete only)

2a. Blow the bore hole clean minimum 4x from the bottom or back by hand pump (Annex B 4).

2b. Brush the bore hole minimum 4x with brush RB according to Table B5 over the entire embedment depth in a twisting motion (if necessary, use a brush extension RBL).

2c. Finally blow the bore hole clean minimum 4x from the bottom or back by hand pump (Annex B 4).

Compressed Air Cleaning (CAC):

All diameter in cracked and uncracked concrete, all drilling methods

2a. Blow the bore hole clean minimum 2x with compressed air (min. 6 bar) (Annex B 4) over the entire embedment depth until return air stream is free of noticeable dust. (If necessary, an extension shall be used.)

Chemofast Injection system UM-H for concrete

Intended use
Installation instructions

Annex B 6

Installation instructions (continuation)

2b. Brush the bore hole minimum 2x with brush RB according to Table B5 over the entire embedment depth in a twisting motion. (If necessary, a brush extension shall be used .RBL)

2c. Finally blow the bore hole clean minimum 2x with compressed air (min. 6 bar) (Annex B 4) over the entire embedment depth until return air stream is free of noticeable dust. (If necessary, an extension shall be used.)

Cleaned bore hole has to be protected against re-contamination in an appropriate way, If necessary, repeat cleaning process directly before dispensing the mortar. In-flowing water must not contaminate the bore hole again.

3. Screw on static-mixing nozzle PM-19E and load the cartridge into an appropriate dispensing tool.
For every working interruption longer than the maximum working time t_{work} (Annex B 5) as well as for new cartridges, a new static-mixer shall be used.

4. Mark embedment depth on the anchor rod. Consider t_{fix} in case of push through installations.
The anchor rod shall be free of dirt, grease, oil or other foreign material.

5. Not proper mixed mortar is not sufficient for fastening.
Dispense and discard mortar until an uniform grey colour is shown (at least 3 full strokes).

6. Piston plugs VS and mixer nozzle extensions VL shall be used according to Table B5 for the following applications:

- Horizontal and vertical downwards direction: Drill bit- $\varnothing d_0 \geq 18$ mm and embedment depth $h_{ef} > 250$ mm
- Vertical upwards direction: Drill bit- $\varnothing d_0 \geq 18$ mm

Assemble mixing nozzle, mixer extension and piston plug before injecting mortar.

Chemofast Injection system UM-H for concrete

Intended use
Installation instructions (continuation)

Annex B 7

Installation instructions (continuation)	
	<p>7a. Injecting mortar without piston plug VS Starting at bottom of the hole and fill the hole up to approximately two-thirds with mortar. (If necessary, a mixer nozzle extension shall be used.) Slowly withdraw of the static mixing nozzle avoid creating air pockets. Observe the temperature related working time t_{work} (Annex B 5).</p>
	<p>7b. Injecting mortar with piston plug VS Starting at bottom of the hole and fill the hole up to approximately two-thirds with mortar. (If necessary, a mixer nozzle extension shall be used.) During injection the piston plug is pushed out of the bore hole by the back pressure of the mortar. Observe the temperature related working time t_{work} (Annex B 5).</p>
	<p>8. Insert the anchor rod while turning slightly up to the embedment mark.</p>
	<p>9. Annular gap between anchor rod and base material must be completely filled with mortar. In case of push through installation the annular gap in the fixture must be filled with mortar also. Otherwise, the installation must be repeated starting from step 7 before the maximum working time t_{work} has expired.</p>
	<p>10. For application in vertical upwards direction the anchor rod shall be fixed (e.g. wedges).</p>
	<p>11. Temperature related curing time t_{cure} (Annex B 5) must be observed. Do not move or load the fastener during curing time.</p>
	<p>12. Install the fixture by using a calibrated torque wrench. Observe maximum installation torque (Table B2 or B4). In case of static requirements (e.g. seismic), fill the annular gap in the fixture with mortar (Annex A 2). Therefore replace the washer by the filling washer VFS and use the mixer reduction nozzle MR.</p>
