for construction products**

## European Technical Assessment

**ETA-17/0336  
of 29 August 2025**

English translation prepared by DIBt - Original version in German language

### General Part

Technical Assessment Body issuing the  
European Technical Assessment:

Deutsches Institut für Bautechnik

Trade name of the construction product

Anchor channels (HAC-C) with channel bolts (HBC)

Product family  
to which the construction product belongs

Anchor channels

Manufacturer

Hilti AG  
Feldkircherstraße 100  
9494 Schaan  
FÜRSTENTUM LIECHTENSTEIN

Manufacturing plant

Hilti Manufacturing Plants

This European Technical Assessment  
contains

53 pages including 3 annexes which form an integral part  
of this assessment

This European Technical Assessment is  
issued in accordance with Regulation (EU)  
No 305/2011, on the basis of

EAD 330008-04-0601, Edition 07/2024

This version replaces

ETA-17/0336 issued on 18 July 2024

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

## Specific Part

### 1 Technical description of the product

The anchor channels (HAC-C) with channel bolts (HBC) are a system consisting of C-shaped channel profile of carbon steel or stainless steel and at least two metal anchors non-detachably fixed to the channel back and channel bolts.

The anchor channel is embedded surface-flush in the concrete. Channel bolts (HBC) with appropriate hexagon nuts and washers are fixed to the channel.

The product description is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor channel is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor channel of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

| Essential characteristic                                                                               | Performance                                                               |
|--------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------|
| Characteristic resistance under tension load (static and quasi-static loading)                         |                                                                           |
| - Resistance to steel failure of anchors                                                               | $N_{Rk,s,a}$ see Annex C1 and C2                                          |
| - Resistance to steel failure of the connection between anchors and channel                            | $N_{Rk,s,c}$ see Annex C1 and C2                                          |
| - Resistance to steel failure of channel lips and subsequently pull-out of channel bolt                | $N_{Rk,s,l}^0 ; S_{l,N}$ see Annex C1 and C2                              |
| - Resistance to steel failure of channel bolt                                                          | $N_{Rk,s}$ see Annex C14                                                  |
| - Resistance to steel failure by exceeding the bending strength of the channel                         | $s_{max}$ see Annex B3 and B4<br>$M_{Rk,s,flex}$ see Annex C3             |
| - Maximum installation torque to avoid damage during installation                                      | $T_{inst,g} ; T_{inst,s}$ see Annex B5                                    |
| - Resistance to pull-out failure of the anchor                                                         | $N_{Rk,p}$ see Annex C4 to C6                                             |
| - Resistance to concrete cone failure                                                                  | $h_{ef}$ see Annex B3 and B4<br>$k_{cr,N} ; k_{ucr,N}$ see Annex C4 to C6 |
| - Minimum edge distances, spacing and member thickness to avoid concrete splitting during installation | $s_{min}$ see Annex B3 and B4<br>$c_{min} ; h_{min}$ see Annex B3 and B4  |
| - Characteristic edge distance and spacing to avoid splitting of concrete under load                   | $s_{cr,sp} ; c_{cr,sp}$ see Annex C4 to C6                                |
| - Resistance to blowout failure - bearing area of anchor head                                          | $A_h$ see Annex A6                                                        |

| Essential characteristic                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Performance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

### 3.2 Safety in case of fire (BWR 2)

| Essential characteristic | Performance                                              |
|--------------------------|----------------------------------------------------------|
| Reaction to fire         | Class A1                                                 |
| Resistance to fire       | $N_{Rk,s,fi}$ ; $V_{Rk,s,y,fi}$<br>see Annex C25 and C26 |

### 3.3 Aspects of durability linked with the Basic Works Requirements

| Essential characteristic | Performance  |
|--------------------------|--------------|
| Durability               | See Annex B1 |

## 4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with EAD No. 330008-04-0601, the applicable European legal act is: [2000/273/EC].

The system to be applied is: 1

## 5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

The following standards are referred to in this European Technical Assessment:

|                                         |                                                                                                                                                                                                        |

Müller

Product and installed condition  
(e.g. hot-rolled channel profile with a round anchor)

Key

- 1 channel bolt
- 2 hexagonal nut
- 3 washer
- 4 fixture
- 5 channel profile
- 6 anchor
- 7 concrete member

Hilti anchor channels (HAC-C) with channel bolts (HBC)

Product Description  
Installed condition

Annex A1

Channel profiles sealing

Channel without additional sealing

Channel with additional sealing (side sealing)

Channel with additional sealing (top sealing)

Hilti anchor channels (HAC-C) with channel bolts (HBC)

Product Description  
Sealing of the channel profile

Annex A2

Anchor channel types

Round anchor

HAC-C-T 29/20,  
HAC-C-T 40/22,  
HAC-C-T 40L,  
HAC-C-T 50/30,  
HAC-C-T 50L,  
HAC-C-T 53/34

Round anchor

HAC-C(-P) 40/22,  
HAC-C-P 40L,  
HAC-C(-P) 50/30,  
HAC-C-P 50L,  
HAC-C 52/34

with

Welded I-anchor

Round anchor

HAC-C 28/15,  
HAC-C 38/17,  
HAC-C 40/25,  
HAC-C 49/30,  
HAC-C 54/33

Hilti anchor channels (HAC-C) with channel bolts (HBC)

Product Description  
Anchor channel types

Annex A3

Marking of the Hilti anchor channel:  
HAC-C(-T)(-P)(-I) X W Z

|     |                                                                                               |
|-----|-----------------------------------------------------------------------------------------------|
| HAC | = Identifying mark of the manufacturer ( <u>H</u> ilti <u>A</u> ncor <u>C</u> hannel)         |
| T   | = Additional marking for serrated channels                                                    |
| P   | = Additional marking for premium line                                                         |
| I   | = Additional marking for I-anchors (no marking in case of round anchors)                      |
| X   | = Size of the channel                                                                         |
| W   | = Channel length                                                                              |
| Z   | = Corrosion protection/material (e.g. F for Hot dip galvanized, A4 or A2 for Stainless steel) |

a)

(sticker and/or ink printed mark e.g. on the back side of the channel e.g. HAC-C-T 40/22 300 F)

|                     |                                            |
|---------------------|--------------------------------------------|
| HAC-C-T             | = Serrated anchor channel                  |
| 40/22 <sup>1)</sup> | = Anchor channel size 40/22                |
| F                   | = Hot dip galvanized                       |
| 300                 | = 300 mm channel length (l <sub>ch</sub> ) |

b)

(stamp mark inside of the channel, e.g. HAC-C-T 40/22 F)

Note : <sup>1)</sup> Anchor channel HAC-C-T 40/22 can be produced as well with marking "38/23" without changes in the sizes of the product. The same performance parameters are applicable to 38/23 as they are for 40/22.

Marking of the Hilti channel bolt:  
HBC(-T) X (-N) Y Z

|     |                                                                                      |
|-----|--------------------------------------------------------------------------------------|
| HBC | = Identifying mark of the manufacturer ( <u>H</u> ilti <u>B</u> olt <u>C</u> hannel) |
| T   | = Additional marking for serrated bolt                                               |
| X   | = Size of the bolt                                                                   |
| N   | = Additional marking for notching bolt                                               |
| Y   | = Steel grade/strength class                                                         |
| Z   | = Corrosion protection/material (e.g. F)                                             |

(stamp mark on the back side of the bolt, e.g. HBC-T40 8.8F)

|       |                                                       |
|-------|-------------------------------------------------------|
| HBC-T | = Serrated bolt (for serrated anchor channel HAC-C-T) |
| 40    | = Size of the channel bolt (see Table 3)              |
| 8.8   | = Strength class 8.8                                  |
| F     | = Hot dip galvanized                                  |

Hilti anchor channels (HAC-C) with channel bolts (HBC)

Product Description  
Marking of anchor channel and channel bolts

Annex A4

## Channel profiles

**Table 1: Dimensions of channel profile**

| Anchor channel                                 | b <sub>ch</sub> | h <sub>ch</sub> <sup>1)</sup> | h <sub>ph</sub> <sup>1)</sup> | t <sub>ch</sub> | d <sub>ch</sub> | f <sup>2)</sup> | I <sub>y</sub>     |
|------------------------------------------------|-----------------|-------------------------------|-------------------------------|-----------------|-----------------|-----------------|--------------------|
|                                                | [mm]            |                               |                               |                 |                 |                 | [mm <sup>4</sup> ] |
| HAC-C-T (hot-rolled serrated) channel profiles |                 |                               |                               |                 |                 |                 |                    |

<sup>1)</sup> For hot-rolled serrated and smooth anchor channels – local increase of the channel height (height of the punched hole) in the area where the anchor is connected is not taken into account in the calculation of the h<sub>ch</sub>;

<sup>2)</sup> For hot-rolled serrated channels (HAC-C-T) height of channel lips includes height of the teeth;

<sup>1)</sup> In scope of delivery only for notched bolts

<sup>2)</sup> Anchors made of carbon steel according to column 2a may also be used if they are welded and their concrete cover is more than 50 mm and tempering colors are removed;

<sup>3)</sup> Anchor channels according to the Table 5 column 3 have marking "A2" and according to the column 4 marking "A4";

<sup>3)</sup> For HAC-C-T 29/20; HAC-C(-P) 40/22, 40L; HAC-C 28/15, 38/17, 40/25, 49/30, 54/33;

<sup>4)</sup> For HAC-C-T 53/34, 50/30, 50L, 40/22, 40L; HAC-C(-P) 50/30, 50L, 53/34.

**Hilti anchor channels (HAC-C) with channel bolts (HBC)**

**Product Description**  
Materials

Annex A8

## Specifications of intended use

### Working life:

The verification and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of anchor channel of at least:

- 50 years  
(anchor channels and channel bolts made of Carbon steel – according to Annex A8, columns 2a-2c)
- 100 years  
(anchor channels and channel bolts made of Stainless steel A4 – according to Annex A8, column 4)

### Anchor channels and channel bolts subject to:

- Static and quasi-static tension and shear perpendicular to the longitudinal axis of the channel
- Static and quasi-static shear in the direction of longitudinal axis  
(anchor channels HAC-C-P 40/22 and HAC-P 40L with notching channel bolts HBC 40/22-N; anchor channels HAC-C-P 50/30 and HAC-C-P 50L with notching channel bolts HBC 50/30-N and serrated anchor channels HAC-C-T with serrated channel bolts HBC-T)
- Fatigue cyclic tension loads  
(anchor channels and channel bolts according to Annex C17)
- Seismic tension, seismic shear perpendicular to the longitudinal axis of the channel and shear in the direction of the longitudinal axis of the channel (seismic performance category C1)  
(anchor channels with channel bolts according to Annex C19);
- Fire exposure only for concrete class C20/25 to C50/60 for tension and shear perpendicular to the longitudinal axis of the channel  
(anchor channels and channel bolts according to Annexes C23-C25)

### Base materials:

- Reinforced or unreinforced compacted normal weight concrete without fibers according to EN 206.
- Strength classes C12/15 to C90/105 according to EN 206.
- Cracked or uncracked concrete.

### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions  
(anchor channels and channel bolts according to Annex A8, Table 5, column 2 and 3).
- Structures subject to internal conditions with usual humidity (e.g. kitchen, bath and laundry in residential buildings, exceptional permanent damp conditions and application under water)  
(anchor channels and channel bolts according to Annex A8, Table 5, column 2c and 3).
- According to EN 1993-1-4 relating to corrosion resistance class CRC II  
(anchor channels and channel bolts made of stainless-steel number 1.4301, washers and nuts made of stainless-steel number 1.4401, 1.4404, 1.4571, 1.4362 and 1.4578 according to Annex A8, Table 5, column 3).
- According to EN 1993-1-4 relating to corrosion resistance class CRC III  
(anchor channels and channel bolts, washers and nuts made of stainless-steel number 1.4401, 1.4404, 1.4571, 1.4362 and 1.4578 according to Annex A8, Table 5, column 4).

**Hilti anchor channels (HAC-C) with channel bolts (HBC)**

**Intended Use  
Specifications**

Annex B1

**Design:**

- Anchor channels are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor channel and channel bolts are indicated on the design drawings (e.g. position of the anchor channel relative to the reinforcement or to supports).
- For static and quasi-static loading and fire exposure the anchor channels are designed in accordance with EN 1992-4 and EOTA TR 047.
- For fatigue loading the anchor channels are designed in accordance with TR 050.
- The characteristic resistances are calculated with the minimum effective embedment depth.

**Installation:**

- The installation of anchor channels is carried out by appropriately qualified personnel under the supervision of the person responsible for the technical matters on site.
- Use of the anchor channels only as supplied by the manufacturer - without any manipulations, repositioning or exchanging of channel components.
- Cutting of anchor channels is allowed only if pieces according to Annex B3, Table 6 and 7 as well as Annex B4, Table 8 are generated including end-spacing and minimum channel length and only to be used in dry internal conditions.
- Installation in accordance with the installation instructions given in Annexes B7-B11.
- The anchor channels are fixed on the formwork, reinforcement or auxiliary construction such that no movement of the channels will occur during the time of laying the reinforcement and of placing and compacting the concrete.
- The concrete under the head of the anchors is properly compacted. The channels are protected from penetration of concrete into the internal space of the channels.
- Washer may be chosen according to Annex A6 and provided separately by the user.
- Orientating the channel bolt (groove according to Annex B8, B9 and B10) rectangular to the channel axis.
- Hexagonal nut must be fastened by a calibrated torque wrench. The required installation torques given in Annex B5 must be applied and must not be exceeded.

Hilti anchor channels (HAC-C) with channel bolts (HBC)

<sup>1)</sup>  $T_{\text{inst}}$  must not be exceeded

<sup>2)</sup> According to the Table 3

<sup>3)</sup> Product not available

**Anchor channels (HAC-C) with channel bolts (HBC)**

**Intended Use**

Installation parameters for channel bolts (HBC)

Annex B5

**General:** The fixture is in contact with the channel profile and the concrete surface

**Steel-steel contact:** The fixture is fastened to the anchor channel by suitable steel part (e.g. washer). Fixture is in contact with the channel profile only.

- Key**
- 1 washer
  - 2 fixture
  - 3 gap
  - 4 suitable steel part

| Steel failure                                                                                                                                      |                            |      |                        |                  |                |                  |                |                |
| Characteristic fatigue limit resistance ( $n \rightarrow \infty$ ) for any steel failure without static preload ( $N_{Ed} = 0$ )                   | $\Delta N_{Rk,s;0;\infty}$ | [kN] | $n \rightarrow \infty$ | 1,8              | 3,2            | 5,5              |                |                |
| Concrete cone and pull-out failure                                                                                                                 |                            |      |                        |                  |                |                  |                |                |
| Reduction factor for fatigue limit resistance ( $n \rightarrow \infty$ ) for concrete cone/pullout failure without static preload ( $N_{Ed} = 0$ ) | $\eta_{c,fat}$             | [-]  | $n \rightarrow \infty$ | 0,5              |                |                  |                |                |

For the reduction of the characteristic resistances given in Tables 41, 42, 45 and 46 in the transition zone from the static resistance to the fatigue limit resistance the partial factors are calculated as follows:

$$\gamma_{M,fat,n} = \gamma_{M,fat} + (\gamma_M - \gamma_{M,fat}) \cdot (\Delta N_{Rk,n} - \Delta N_{Rk,\infty}) / (N_{Rk} - \Delta N_{Rk,\infty})$$

In absence of other national regulations, the following partial factors  $\gamma_M$  and  $\gamma_{M,fat}$  are recommended for design method I according to EOTA TR 050:

$\gamma_M$  according to Annex C1

$$\gamma_{M,fat} = 1,35$$

In absence of other national regulations, the following safety factor  $\gamma_{M,fat}$  is recommended for design method II (Table 34) according to EOTA TR 050:

$$\gamma_{M,fat} = 1,35$$

#### Hilti anchor channels (HAC-C) with channel bolts (HBC)

##### Performance

Characteristic resistances under fatigue cyclic tension load according to assessment method A1, A2 and B

Annex C20

**Table 47: Combination of anchor channels and channel bolts under seismic load  
(seismic performance category C1)**

| Anchor channel  | Channel bolt |          |             |                                    |

**Fire exposure from one side only**

**Fire exposure from more than one side**

Hilti anchor channels (HAC-C) with channel bolts (HBC)

**Performance**

Characteristic resistances of anchor channels and channel bolts under fire exposure

Annex C27
