European Technical Assessment Body for construction products

Designated in accordance with Article 39 of Regulation (EU) No 2024/3110 and member of EOTA (European Organisation for Technical Assessment)

European Technical Assessment ETA-20/1287 of 27 May 2026

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the European Technical Assessment:	Deutsches Institut für Bautechnik
Trade name of the construction product	Injection system PURE500+ for concrete
Product family to which the construction product belongs	Bonded fasteners and bonded expansion fasteners for use in concrete (Alternative drilling methods, seismic and fire in steel fibre reinforced concrete, variable working life, time-to-failure assessment)
Manufacturer	Stanley Black & Decker Deutschland GmbH Richard-Klinger-Straße 11 65510 Idstein DEUTSCHLAND
Manufacturing plant	Plant 1
This European Technical Assessment contains	49 pages including 3 annexes which form an integral part of this assessment
This European Technical Assessment is issued in accordance with Article 95(4) of Regulation (EU) 2024/3110, on the basis of	EAD 330499-02-0601-v01
This version replaces	ETA-20/1287 issued on 12 May 2021

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 36(3) of Regulation (EU) No 2024/3110.

Specific Part

1 Technical description of the product

The "Injection system PURE500+ for concrete" is a bonded anchor consisting of a cartridge with injection mortar Injection mortar PURE500+ and a steel element according to Annex A 3 to Annex A 5.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life according to Annex B2, use conditions. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex C 1 to C 6, C 8 to C 11, C 13 to C 16, B 3
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C 1, C 7, C 12, C 17
Displacements under short-term and long-term loading	See Annex C 18 to C 20
Characteristic resistance and displacements for seismic performance categories C1 and C2	See Annex C 21 to C 28

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C 29 to C 31

3.3 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330499-02-0601-v01 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 27 May 2026 by Deutsches Institut für Bautechnik

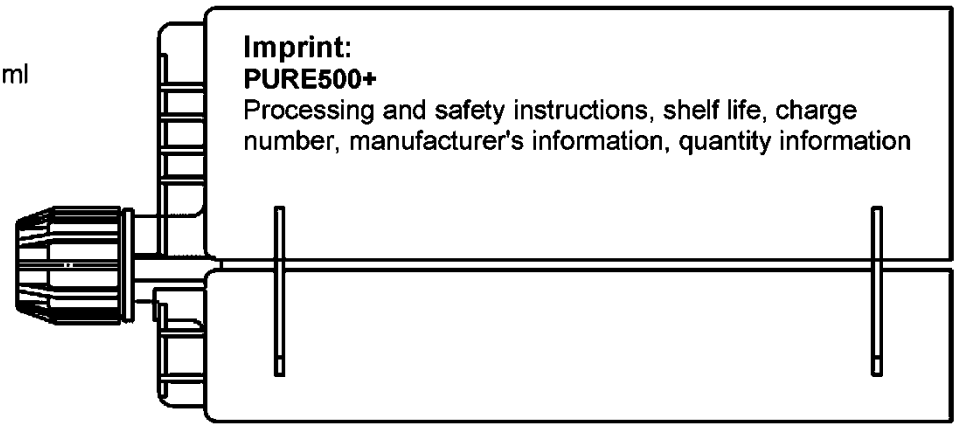
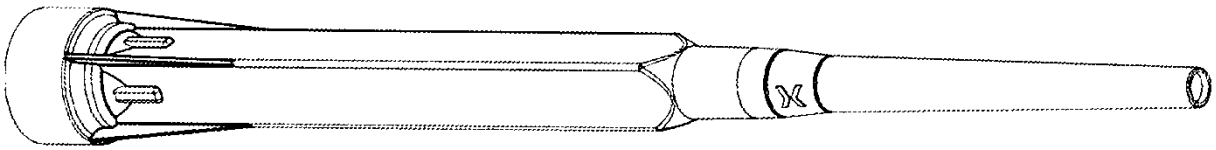
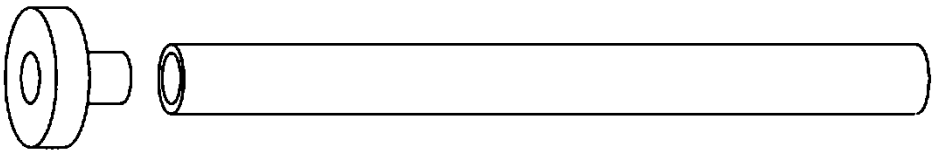
440 ml, 500 ml up to 540 ml, 585 ml and 1400 ml



Static mixer PM-19E

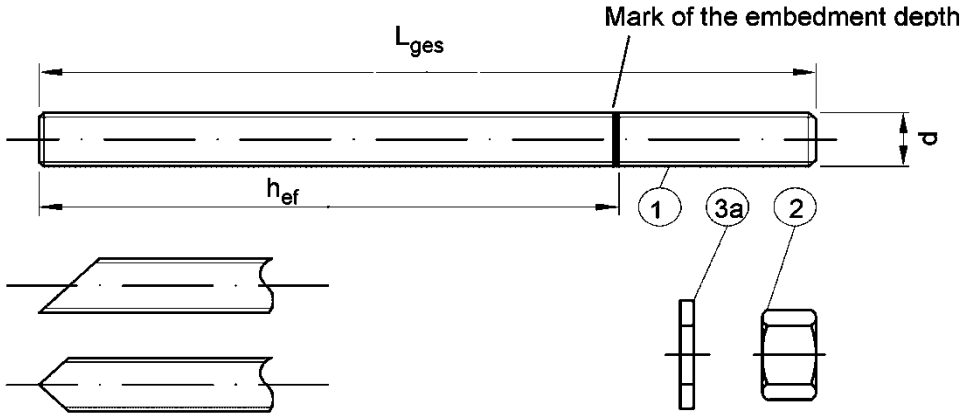


Piston plug VS and mixer extension VL



Injection system PURE500+ for concrete	**Annex A 2**
Product description Injection system	

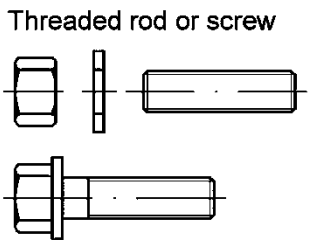
Threaded rod M8 up to M30 with washer and hexagon nut

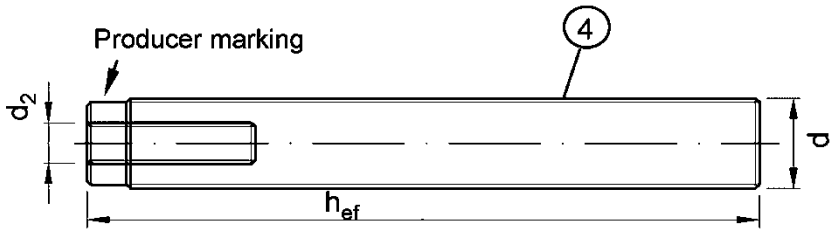


Commercial standard rod with:
- Materials, dimensions and mechanical properties acc. to Table A1
- Inspection certificate 3.1 acc. to EN 10204:2004. The document shall be stored.
- Marking of embedment depth

For hot dip galvanized elements, the requirements with regards to the combination of nuts and rods according to EN ISO 10684:2004+AC:2009 Annex F shall be considered.

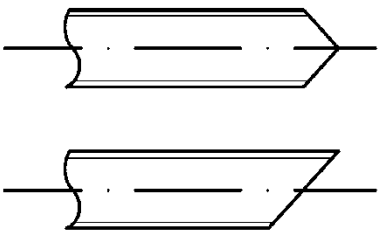
Internal threaded rod IG-M6 to IG-M20



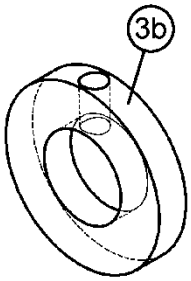


Producer marking: e.g.  M8

I	Marking Internal thread (optional)
	Mark
M8	Thread size (Internal thread)
A4	additional mark for stainless steel
HCR	additional mark for high-corrosion resistance steel
-8	additional mark for property class 8.8



Filling washer VFS



Mixer reduction nozzle MR

Temperature Range:	I: - 40°C to +40°C[1] II: - 40°C to +72°C[2] III: - 40°C to +80°C[3]

[1] (max. long-term temperature +24°C and max. short-term temperature +40°C)
[2] (max. long-term temperature +50°C and max. short-term temperature +72°C)
[3] (max. long-term temperature +60°C and max. short-term temperature +80°C)
[4] only C20/25 to C50/60 and without fibers
[5] with fibers only by hammer (HD), hollow (HDB) or compressed air drilling mode (CD)

Injection system PURE500+ for concrete	**Annex B 1**
Intended use Specifications	

Deutsches Institut für Bautechnik DIBt

Base materials:

- Compacted, reinforced or unreinforced normal weight concrete with strength classes C20/25 to C90/105 according to EN 206:2013 + A2:2021.
- Steel fiber reinforced concrete according to EN 206:2013 + A2:2021 with steel fibers according to EN 14889-1:2006, section 5, group 1, with a maximum fiber content of 80kg/m³.

Use conditions (Environmental conditions):

For working life for at least 50 and / or 100 years

- Structures subject to dry internal conditions (all materials).
- For all other conditions according to EN 1993-1-4:2006 + A1:2015 corresponding to corrosion resistance class:
  - Stainless steel A2 according to Annex A 4, Table A1: CRC II
  - Stainless steel A4 according to Annex A 4, Table A1: CRC III
  - High corrosion resistance steel HCR according to Annex A 4, Table A1: CRC V

For variable working life

- Structures subject to internal and external conditions: Classification of atmospheric corrosivity, determination and estimation C1-CX according to EN ISO 9223:2012 Table C.1 for a variable working life according to Table B1.
  - Carbon steel, hot dip galvanized according to EN ISO 10684:2004 + AC:2009 with mean thickness ≥ 50 µm

Table B1: Variable working life

Corrosivity category[1)]	Corrosivity	Working life (years)
C1	Very low	50
C2	Low	50
C3	Medium	25
C4	High	12,5
C5	Very High	5
CX	Extreme	2

1) Corrosivity categories according to EN ISO 9223:2012, Table C.1

Design:

- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e. g. position of the fastener relative to reinforcement or to supports, etc.).
- Fasteners are designed under the responsibility of an engineer experienced in fasteners and concrete work.
- The fasteners are designed in accordance to EN 1992-4:2018 and Technical Report TR 055, Edition February 2018.
- Fasteners in steel fiber reinforced concrete may be designed in accordance with EN 1992-4:2018. All performance parameters are to be applied as for normal concrete of strength classes C20/25 to C50/60 without fibers.
- The fasteners under fire exposure are designed in accordance to Technical Report TR 082, Edition June 2023.

Installation:

- Dry, wet concrete or flooded bore holes (not sea-water).
- Hole drilling by hammer (HD), hollow (HDB), compressed air (CD) or diamond drill mode (DD).
- Overhead installation allowed.
- Fastener installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.

+ 10 °C	to	+ 14 °C	60 min	28 h
+ 15 °C	to	+ 19 °C	40 min	18 h
+ 20 °C	to	+ 24 °C	30 min	12 h
+ 25 °C	to	+ 34 °C	12 min	9 h
+ 35 °C	to	+ 39 °C	8 min	6 h
+ 40 °C			8 min	4 h
Cartridge temperature			+5°C to +40°C	

[1)] The minimum curing time is only valid for dry base material.
In wet base material the curing time must be doubled.

Injection system PURE500+ for concrete

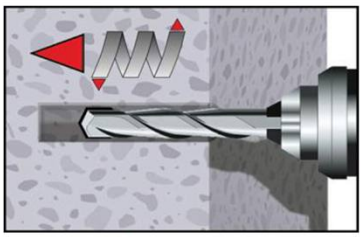
Intended use
Parameter Centring aid
Working time and curing time

Annex B 5

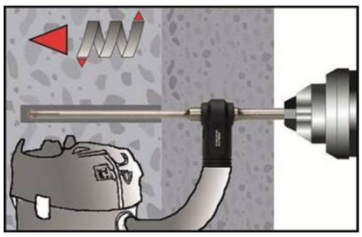
Deutsches Institut für Bautechnik DIBt

Installation instructions

Drilling of the bore hole (HD, HDB, CD)



1a. **Hammer drilling (HD) / Compressed air drilling (CD)**
Drill a hole to the required embedment depth.
Drill bit diameter according to Table B2, B3 or B4.
Aborted drill holes shall be filled with mortar.
Proceed with Step 2.

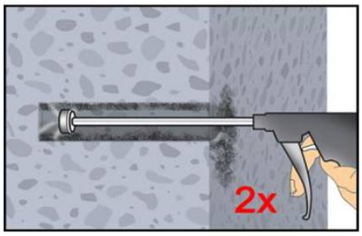


1b. **Hollow drill bit system (HDB) (see Annex B 4)**
Drill a hole to the required embedment depth.
Drill bit diameter according to Table B2, B3 or B4.
The hollow drilling system removes the dust and cleans the bore hole.
Proceed with Step 3.

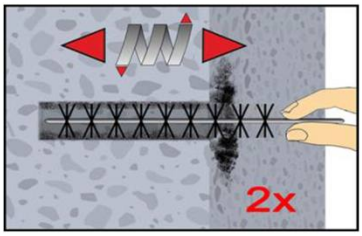
Attention! Standing water in the bore hole must be removed before cleaning.

Compressed Air Cleaning (CAC):

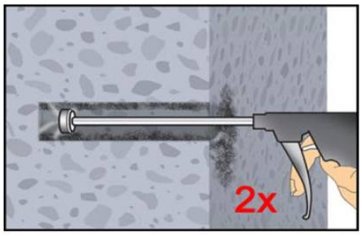
All diameter in cracked and uncracked concrete



2a. Blow the bore hole clean minimum 2x with compressed air (min. 6 bar, oil-free) (Annex B 4) over the entire embedment depth until return air stream is free of noticeable dust. (If necessary, an extension shall be used.)



2b. Brush the bore hole minimum 2x with brush RB according to Table B5 over the entire embedment depth in a twisting motion. (If necessary, a brush extension RBL shall be used.)



2c. Finally blow the bore hole clean minimum 2x with compressed air (min. 6 bar, oil-free) (Annex B 4) over the entire embedment depth until return air stream is free of noticeable dust. (If necessary, an extension shall be used.)

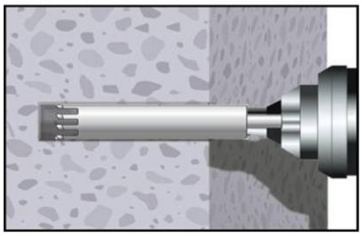
Cleaned bore hole has to be protected against re-contamination in an appropriate way,
If necessary, repeat cleaning process directly before dispensing the mortar. In-flowing water must not contaminate the bore hole again.

Injection system PURE500+ for concrete	**Annex B 6**
Intended use Installation instructions	

Deutsches Institut für Bautechnik DIBt

Installation instructions (continuation)

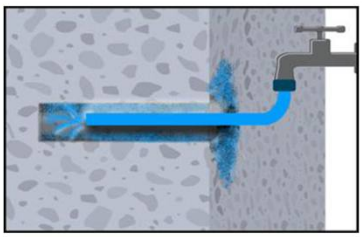
Drilling of the bore hole (DD)



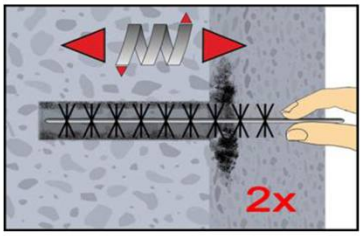
1a. Diamond drilling (DD)
Drill a hole to the required embedment depth required
Drill bit diameter according to Table B2, B3 or B4.
Aborted drill holes shall be filled with mortar.
Proceed with Step 2.

Flush & Compressed Air Cleaning (SPCAC):

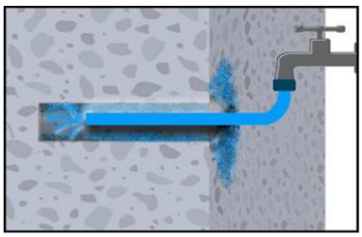
All diameter in uncracked concrete



2a. Flushing with water until clear water comes out.

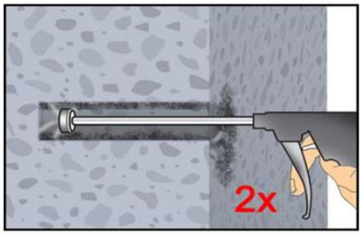


2b. Brush the bore hole minimum 2x with brush RB according to Table B5 over the entire embedment depth in a twisting motion. (If necessary, a brush extension RBL shall be used.)

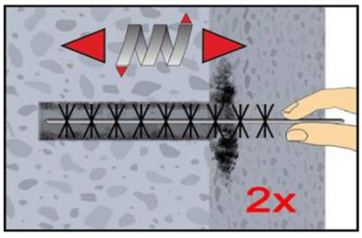


2c. Flushing again with water until clear water comes out.

Attention! Standing water in the bore hole must be removed before proceeding.



2d. Blow the bore hole clean minimum 2x with compressed air (min. 6 bar, oil-free) (Annex B 4) over the entire embedment depth until return air stream is free of noticeable dust. (If necessary, an extension shall be used.)

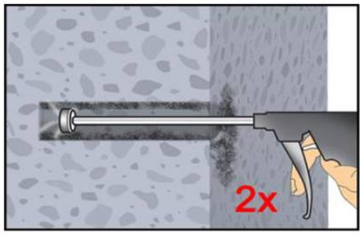


2e. Brush the bore hole minimum 2x with brush RB according to Table B5 over the entire embedment depth in a twisting motion. (If necessary, a brush extension RBL shall be used.)

Injection system PURE500+ for concrete	**Annex B 7**
Intended use Installation instructions (continuation)	

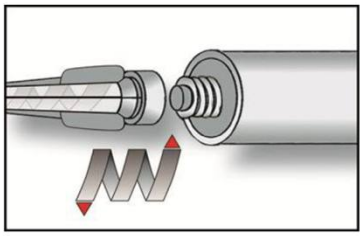
Deutsches Institut für Bautechnik DIBt

Installation instructions (continuation)

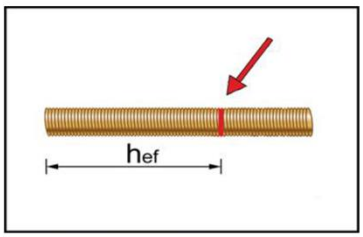


2f. Finally blow the bore hole clean minimum 2x with compressed air (min. 6 bar, oil-free) (Annex B 4) over the entire embedment depth until return air stream is free of noticeable dust. (If necessary, an extension shall be used.)

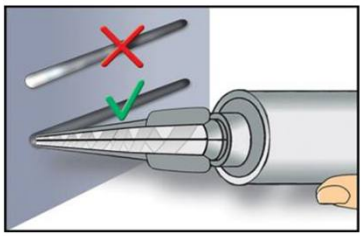
Cleaned bore hole has to be protected against re-contamination in an appropriate way, If necessary, repeat cleaning process directly before dispensing the mortar. In-flowing water must not contaminate the bore hole again.



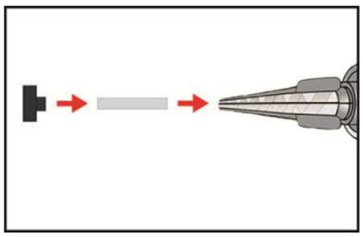
3. Screw on static-mixing nozzle PM-19E and load the cartridge into an appropriate dispensing tool.
For every working interruption longer than the maximum working time t_{work} (Annex B 5) as well as for new cartridges, a new static-mixer shall be used.



4. Mark embedment depth on the anchor rod.
The anchor rod shall be free of dirt, grease, oil or other foreign material.

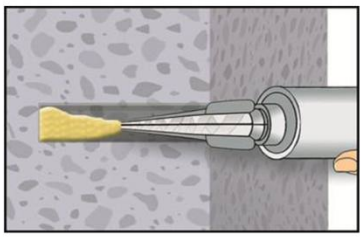


5. Not proper mixed mortar is not sufficient for fastening.
Dispense and discard mortar until an uniform grey or red colour is shown (at least 3 full strokes).



6. Piston plugs VS and mixer nozzle extensions VL shall be used according to Table B5 for the following applications:
- Horizontal and vertical downwards direction: Drill bit-Ø $d_0 \geq 18$ mm and embedment depth $h_{ef} > 250$mm
- Vertical upwards direction: Drill bit-Ø $d_0 \geq 18$ mm

Assemble mixing nozzle, mixer extension and piston plug before injecting mortar.

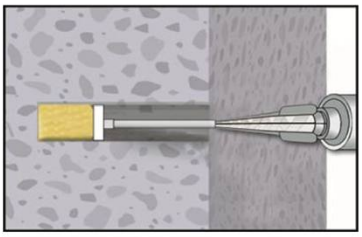


7a. **Injecting mortar without piston plug VS:**
Starting at bottom of the hole and fill the hole up to approximately two-thirds with adhesive. (If necessary, a mixer nozzle extension shall be used.)
Slowly withdraw of the static mixing nozzle avoid creating air pockets
Observe the temperature related working time t_{work} (Annex B 5).

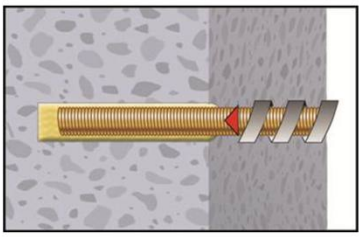
Injection system PURE500+ for concrete	**Annex B 8**
Intended use Installation instructions (continuation)	

Deutsches Institut für Bautechnik DIBt

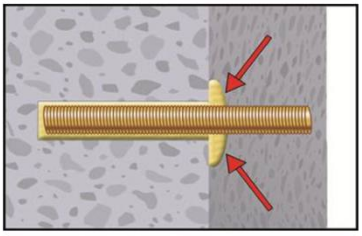
Installation instructions (continuation)



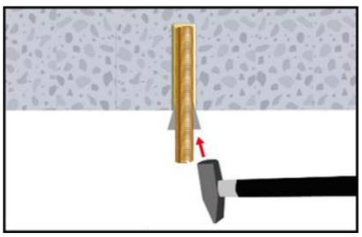
7b. **Injecting mortar with piston plug VS:**
Starting at bottom of the hole and fill the hole up to approximately two-thirds with adhesive. (If necessary, a mixer nozzle extension shall be used.)
During injection the piston plug is pushed out of the bore hole by the back pressure of the mortar.
Observe the temperature related working time t_{work} (Annex B 5).



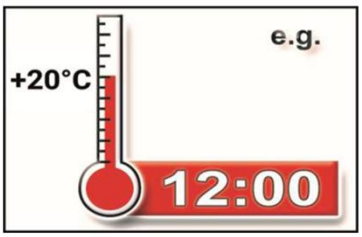
8. Insert the anchor rod while turning slightly up to the embedment mark.



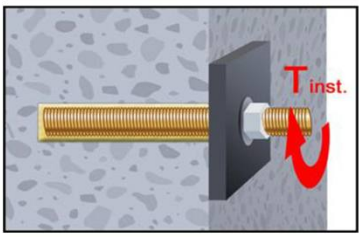
9. Annular gap between anchor rod and base material must be completely filled with mortar. In case of push through installation the annular gap in the fixture must be filled with mortar also.
Otherwise, the installation must be repeated starting from step 7 before the maximum working time t_{work} has expired.



10. For application in vertical upwards direction the anchor rod shall be fixed (e.g. wedges).



11. Temperature related curing time t_{cure} (Annex B 5) must be observed.
Do not move or load the fastener during curing time.



12. Install the fixture by using a calibrated torque wrench. Observe maximum installation torque (Table B2 or B4).
In case of static requirements (e.g. seismic), fill the annular gab in the fixture with mortar (Annex A 2). Therefore replace the washer by the filling washer VFS and use the mixer reduction nozzle MR.

Threaded rod					**M8**	**M10**	**M12**	**M16**	**M20**	**M24**	**M27**	**M30**
Steel failure												
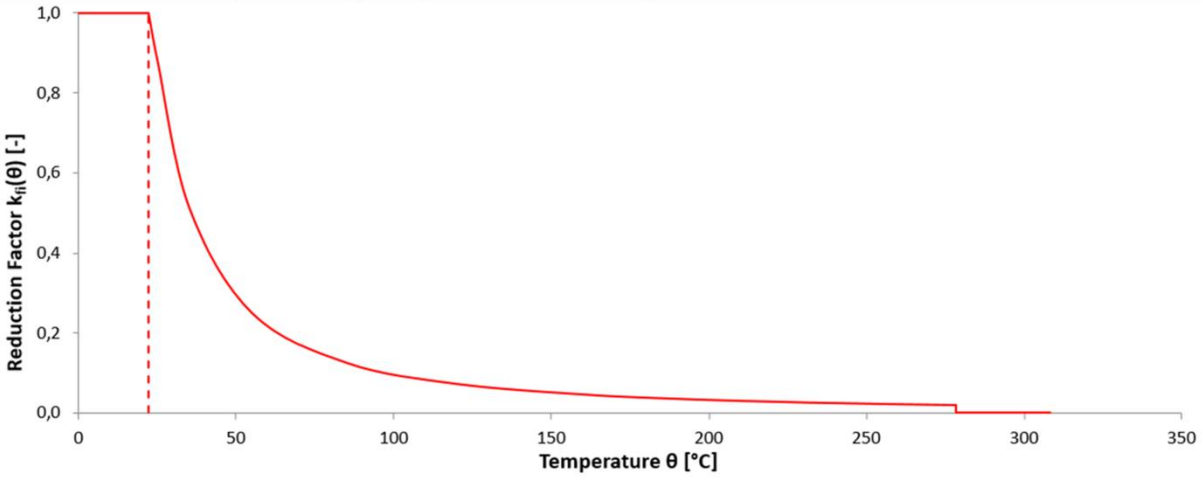
Characteristic tension resistance; Steel, Stainless Steel A2, A4 and HCR, strength class 5.8 resp. 50 and higher	$N_{Rk,s,fi}$	[kN]	Fire exposure time [min]	30	1,1	1,7	3,0	5,7	8,8	12,7	16,5	20,2
				60	0,9	1,4	2,3	4,2	6,6	9,5	12,4	15,1
				90	0,7	1,0	1,6	3,0	4,7	6,7	8,7	10,7
				120	0,5	0,8	1,2	2,2	3,4	4,9	6,4	7,9
Characteristic bond resistance in cracked and uncracked concrete C20/25 up to C50/60 under fire conditions for a given temperature θ												
Temperature reduction factor	$k_{fi,p}(\theta)$	[-]	$\theta < 23°C$		1,0							
			$23°C \leq \theta \leq 278°C$		$150{,}28 \cdot \theta^{-1{,}598} \leq 1{,}0$							
			$\theta > 278°C$		0,0							



Characteristic bond resistance for a given temperature (θ)	$\tau_{Rk,fi}(\theta)$	[N/mm²]	$k_{fi,p}(\theta) \cdot \tau_{Rk,cr,(C20/25)}$ [1)]
Steel failure without lever arm			
Characteristic shear resistance; Steel, Stainless Steel A2, A4 and HCR, strength class 5.8 resp. 50 and higher	$V_{Rk,s,fi}$	[kN]	Fire exposure time [min]
Steel failure with lever arm			
Characteristic bending moment; Steel, Stainless Steel A2, A4 and HCR, strength class 5.8 resp. 50 and higher	$M^0_{Rk,s,fi}$	[Nm]	Fire exposure time [min]

	M8	**M10**	**M12**	**M16**	**M20**	**M24**	**M27**	**M30**
30	1,1	1,7	3,0	5,7	8,8	12,7	16,5	20,2
60	0,9	1,4	2,3	4,2	6,6	9,5	12,4	15,1
90	0,7	1,0	1,6	3,0	4,7	6,7	8,7	10,7
120	0,5	0,8	1,2	2,2	3,4	4,9	6,4	7,9
30	1,1	2,2	4,7	12,0	23,4	40,4	59,9	81,0
60	0,9	1,8	3,5	9,0	17,5	30,3	44,9	60,7
90	0,7	1,3	2,5	6,3	12,3	21,3	31,6	42,7
120	0,5	1,0	1,8	4,7	9,1	15,7	23,3	31,5

1) $\tau_{Rk,cr,(C20/25)}$ characteristic bond resistance for cracked concrete for concrete strength class C20/25 for the relevant temperature range and working life.

Injection system PURE500+ for concrete

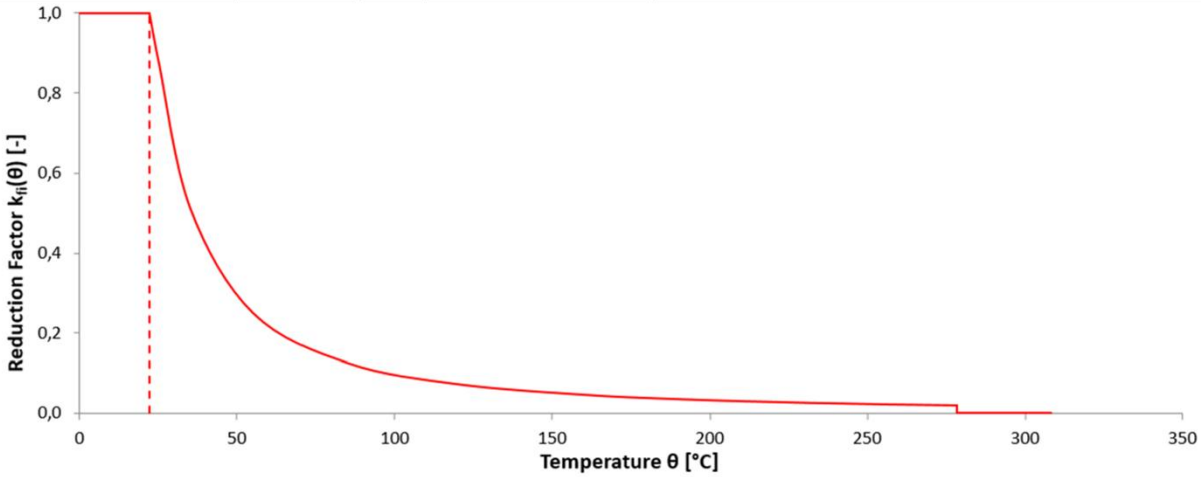
Performances
Characteristic values of tension and shear loads under fire exposure (threaded rod)

Annex C 29

Deutsches Institut für Bautechnik DIBt

Table C38: Characteristic values of tension and shear loads under fire exposure in hammer drilled holes (HD), compressed air drilled holes (CD) and in hammer drilled holes with hollow drill bit (HDB)

Internal threaded anchor rods					**IG-M6**	**IG-M8**	**IG-M10**	**IG-M12**	**IG-M16**	**IG-M20**
Steel failure										
Characteristic tension resistance; Steel, Stainless Steel A4 and HCR, strength class 5.8 and 8.8 resp. 70	$N_{Rk,s,fi}$	[kN]	Fire exposure time [min]	30	0,3	1,1	1,7	3,0	5,7	8,8
				60	0,2	0,9	1,4	2,3	4,2	6,6
				90	0,2	0,7	1,0	1,6	3,0	4,7
				120	0,1	0,5	0,8	1,2	2,2	3,4
Characteristic bond resistance in cracked and uncracked concrete C20/25 up to C50/60 under fire conditions for a given temperature θ										
Temperature reduction factor	$k_{fi,p}(\theta)$	[-]	$\theta < 23°C$		1,0					
			$23°C \leq \theta \leq 278°C$		$150{,}28 \cdot \theta^{-1{,}598} \leq 1{,}0$					
			$\theta > 278°C$		0,0					



Characteristic bond resistance for a given temperature (θ)	$\tau_{Rk,fi}(\theta)$	[N/mm²]	$k_{fi,p}(\theta) \cdot \tau_{Rk,cr,(C20/25)}$ [1)]

Steel failure without lever arm										
Characteristic shear resistance; Steel, Stainless Steel A4 and HCR, strength class 5.8 and 8.8 resp. 70	$V_{Rk,s,fi}$	[kN]	Fire exposure time [min]	30	0,3	1,1	1,7	3,0	5,7	8,8
				60	0,2	0,9	1,4	2,3	4,2	6,6
