This European Technical Assessment
contains

19 pages including 3 annexes which form an integral part
of this assessment

This European Technical Assessment is
issued in accordance with Article 95(4) of
Regulation (EU) No 2024/3110, on the basis of

EAD 330087-01-0601

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 36(3) of Regulation (EU) No 2024/3110.

Specific Part

1 Technical description of the product

The subject of this European Technical Assessment is the post-installed connection, by anchoring or overlap connection joint, of reinforcing bars (rebars) in existing structures made of normal weight concrete, using the "Rebar connection with injection system BigFix Pro" in accordance with the regulations for reinforced concrete construction.

Reinforcing bars made of steel with a diameter ϕ from 10 to 25 mm according to Annex A and injection mortar BigFix Pro are used for rebar connections. The rebar is placed into a drilled hole filled with injection mortar and is anchored via the bond between rebar, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European assessment Document

The performances given in Section 3 are only valid if the rebar connection is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the rebar connections of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

| Essential characteristic | Performance |
|---|-------------------------|
| Characteristic resistance under static and quasi-static loading | See Annex C1 |
| Characteristic resistance under seismic loading | No performance assessed |

3.2 Safety in case of fire (BWR 2)

| Essential characteristic | Performance |
|--------------------------|-------------------------|
| Reaction to fire | Class A1 |
| Resistance to fire | No performance assessed |

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with European Assessment Document EAD No. 330087-01-0601, the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Issued in Berlin on 9 February 2026 by Deutsches Institut für Bautechnik

Annex A3

Properties of reinforcing bars (rebar)

Figure A4.1:

- The minimum value of related rib area $f_{R,min}$ according to EN 1992-1-1:2011
- The maximum outer rebar diameter over the ribs shall be:
 - The nominal diameter of the bar with rib $\phi + 2 \cdot h$ ($h \leq 0,07 \cdot \phi$)
 - (ϕ : Nominal diameter of the bar; h_{rib} = rib height of the bar)

Table A4.1: Installation conditions for rebars

| Nominal diameter of the bar | | ϕ | 10 ¹⁾ | | 12 ¹⁾ | | 14 | 16 | 20 | 25 ¹⁾ | | |
|--------------------------------------|-----------|--------|------------------------------|----|------------------|----|--------------|----|----|------------------|----|--|
| Nominal drill hole diameter | d_0 | [mm] | 12 | 14 | 14 | 16 | 18 | 20 | 25 | 30 | 35 | |
| Drill hole depth | h_0 | | $h_0 = l_v$ | | | | | | | | | |
| Effective embedment depth | l_v | | acc. to static calculation | | | | | | | | | |
| Minimum thickness of concrete member | h_{min} | | $l_v + 30$ (≥ 100) | | | | $l_v + 2d_0$ | | | | | |

¹⁾ Both drill hole diameters can be used.

Specifications of intended use part 2

Anchorage subject to:

- Static and quasi-static loading: reinforcing bar (rebar) size 10 mm to 25 mm;

Base materials:

- Compacted reinforced or unreinforced normal weight concrete without fibres according to EN 206:2013+A2:2021
- Concrete strength classes C20/25 to C35/45 according to EN 206:2013+A2:2021
- Maximum chloride content of 0,40 % (CL 0.40) related to the cement content according to EN 206:2013+A2:2021
- Non-carbonated concrete

Note: In case of a carbonated surface of the existing concrete structure the carbonated layer shall be removed in the area of the post-installed rebar connection with a diameter of $\phi + 60$ mm prior to the installation of the new rebar. The depth of concrete to be removed shall correspond to at least the minimum concrete cover in accordance with EN 1992-1-1:2011. The foregoing may be neglected if building components are new and not carbonated and if building components are in dry conditions.

Design:

- The structural design according to EN 1992-1-1:2011 and Annex B3 are conducted under responsibility of a designer experienced in the field of anchorages and concrete works.
- Verifiable calculation notes and drawings are prepared taking account of the forces to be transmitted.
- The actual position of the reinforcement in the existing structure shall be determined on the basis of the construction documentation and taken into account when designing.

Installation:

- The installation of post-installed rebar shall be done only by suitable trained installer and under Supervision on site; the conditions under which an installer may be considered as suitable trained and the conditions for Supervision on site are up to the Member States in which the installation is done.
- Check the position of the existing rebars (if the position of existing rebars is not known, it shall be determined using a rebar detector suitable for this purpose as well as on the basis of the construction documentation and then marked on the building component for the overlap joint).

Rebar connection with injection system BigFix Pro

Intended use
Specifications part 2

Annex B2

General construction rules for post-installed rebars

Figure B3.1:

- Only tension forces in the axis of the rebar may be transmitted.
- The transfer of shear forces between new concrete and existing structure shall be designed additionally according to EN 1992-1-1:2011.
- The joints for concreting must be roughened to at least such an extent that aggregate protrude.

¹⁾ If the clear distance between lapped bars exceeds 4ϕ or 50 mm then the lap length shall be increased by the difference between the clear bar distance and the smaller 4ϕ or 50 mm.

- c** concrete cover of post-installed rebar
c₁ concrete cover at end-face of existing rebar
c_{min} minimum concrete cover according to **Table B4.1** and to EN 1992-1-1:2011, Section 4.4.1.2
φ nominal diameter of reinforcing bar
l₀ lap length, according to EN 1992-1-1:2011 for static loading
l_v effective embedment depth, $\geq l_0 + c_1$
d₀ nominal drill bit diameter, see **Annex B5**

Intended use

Working times and curing times;
Installation tools for drilling and cleaning the bore hole and injection of the mortar

Annex B5

Safety regulations

Review the Safety Data Sheet (SDS) before use for proper and safe handling!
Wear well-fitting protective goggles and protective gloves when working with mortar BigFix Pro.
Important: Observe the instructions for use provided with each cartridge.

Installation instruction part 1; Installation with BigFix Pro

Hole drilling

Note: Before drilling, remove carbonized concrete; clean contact areas (see **Annex B2**)
In case of aborted drill holes the drill hole shall be filled with mortar.

1a Hammer drilling or compressed air drilling

Drill the hole to the required embedment depth using a hammer drill with carbide drill bit set in rotation hammer mode or a pneumatic drill.
Drill bit sizes see **Table B5.2**.

1b Hammer drilling with hollow drill bit

Drill the hole to the required embedment depth using a hammer drill with hollow drill bit in rotation hammer mode.
Dust extraction conditions see drill hole cleaning **Annex B7**.
Drill bit sizes see **Table B5.2**.

2

Measure and control concrete cover c
($c_{\text{drill}} = c + \text{Ø} / 2$)
Drill parallel to surface edge and to existing rebar.
Where applicable use drilling aid.

For holes $l_v > 20$ cm use drilling aid.
Three different options can be considered:
A) drilling aid
B) Slat or spirit level
C) Visual check

Minimum concrete cover c_{min} see **Table B4.1**.

Annex B6

Installation instruction part 2; Installation with BigFix Pro

Drill hole cleaning

| | | | | |
|--|---|--|---|--|
| | | Hammer or compressed air drilling | |  |
| 3a |  | Clean the drill hole: For $d_0 < 18$ mm and depths l_v resp. $l_{e,ges} \leq 12 \cdot \phi$ blow out the hole three times by hand. |  | For $d_0 > 18$ mm and depths l_v resp. $l_{e,ges} > 12 \cdot \phi$ blow out the hole three times with oil-free compressed air ($p \geq 6$ bar). Use suitable compressed-air nozzle (see Table B5.2). |
| |  | Brush drill hole three times; for drill hole diameters $d_0 \geq 30$ mm attach brush to a power tool and brush hole with a speed of max. 550 revolutions per minute. For deep holes a brush extension is mandatory. Use suitable brushes (see Table B5.2). | | |
| |  | Clean the drill hole: For $d_0 < 18$ mm and depths l_v resp. $l_{e,ges} \leq 12 \cdot \phi$ blow out the hole three times by hand. |  | For $d_0 > 18$ mm and depths l_v resp. $l_{e,ges} > 12 \cdot \phi$ blow out the hole three times with oil-free compressed air ($p \geq 6$ bar) Use suitable compressed-air nozzle (see Table B5.2). |
| | | Hammer drilling with hollow drill bit | |  |
| 3b |  | Use a suitable dust extraction system, e. g. fischer FVC 35 M or a comparable dust extraction system with equivalent performance data. Drill the hole with hollow drill bit. The dust extraction system has to extract the drill dust nonstop during the drilling process and must be adjusted to maximum power. No further drill hole cleaning necessary. | | |
| Rebar connection with injection system BigFix Pro | | | | Annex B7 |
| Intended use Installation instruction part 2, drill hole cleaning | | | | |

Installation instruction part 3; Installation with BigFix Pro

reinforcing bars (rebar) and cartridge preparation

| | | |
|---|---|--|
| 4 |  | <p>Before use, make asure that the rebar is dry and free of oil or other residue. Mark the embedment depth l_v (e.g. with tape) Insert rebar in borehole, to verify drill hole depth and setting depth l_v resp. $l_{e,ges}$.</p> |
| 5 |  | <p>Twist off the sealing cap Twist on the static mixer (the spiral in the static mixer must be clearly visible).</p> |
| 6 |  | <p>Place the cartridge into a suitable dispenser.</p> |
| 7 |  | <p>Press out approximately 10 cm of mortar until the resin is permanently grey in colour. Mortar which is not grey in colour will not cure and must be disposed.</p> |

Rebar connection with injection system BigFix Pro

Intended use
Installation instruction part 3,
reinforcing bars (rebar) and cartridge preparation

Annex B8

Installation instruction part 4; Installation with BigFix Pro

Injection of the mortar without extension tube

8a

Inject the mortar from the back of the hole towards the front and slowly withdraw the static mixer step by step with each trigger pull. Avoid bubbles. Fill holes approximately 2/3 full, to ensure that the annular gap between the rebar and the concrete will be completely filled with adhesive over the entire embedment length. The conditions for mortar injection without extension tube can be found in **Table B4.3**.

After injecting, release the dispenser. This will prevent further mortar discharge from the static mixer.

Injection of the mortar with extension tube

8b

Assemble static mixer FIS MR Plus or FIS JMR, extension tube and appropriate injection adapter (see **Table B5.2**).

Mortar level mark

Mark the required mortar level l_m and embedment depth l_v resp. $l_{e,ges}$ with tape or marker on the injection extension tube.

a) Estimation:

$$l_m = \frac{1}{3} \cdot l_v \text{ resp. } l_m = \frac{1}{3} \cdot l_{e,ges} \text{ [mm]}$$

b) Precise equation for optimum mortar volume:

$$l_m = l_v \text{ resp. } l_{e,ges} \left(\left(1,2 \cdot \frac{d_s^2}{d_0^2} - 0,2 \right) \right) \text{ [mm]}$$

Mortar level mark

Insert injection adapter to back of the hole. Begin injection allowing the pressure of the injected adhesive mortar to push the injection adapter towards the front of the hole. Do not actively pull out! Fill holes approximately 2/3 full, to ensure that the annular gap between the rebar and the concrete will be completely filled with adhesive over the embedment length. When using an injection adapter continue injection until the mortar level mark l_m becomes visible. Maximum embedment depth see **Table B4.2**.

After injecting, release the dispenser. This will prevent further mortar discharge from static mixer.

Rebar connection with injection system BigFix Pro

Intended use

Installation instruction part 4, mortar injection

Annex B9

Installation instruction part 5; Installation with BigFix Pro

Insert rebar

| | | |
|----|---|--|
| 9 |  | <p>Insert the rebar slowly twisted into the borehole until the embedment mark is reached. Recommendation: Rotation back and forth of the reinforcement bar makes pushing easy.</p> |
| 10 |  | <p>For overhead installation, support the rebar and secure it from falling till mortar started to harden, e.g. using wedges.</p> |
| 11 |  | <p>After installing the rebar the annular gap must be completely filled with mortar.</p> <p>Proper installation</p> <ul style="list-style-type: none"> • Desired embedment depth is reached l_v, resp. $l_{e,ges}$: embedment mark at concrete surface • Excess mortar flows out of the borehole after the rebar has been fully inserted up to the embedment mark. |
| 12 |  | <p>Observe the working time "t_{work}" (see Table B5.1), which varies according to temperature of base material. Minor adjustments to the rebar position may be performed during the working time</p> <p>Full load may be applied only after the curing time "t_{cure}" has elapsed (see Table B5.1).</p> |

Rebar connection with injection system BigFix Pro

Intended use
Installation instruction part 5, insert rebar

Annex B10

Minimum anchorage length and minimum lap length

The minimum anchorage length $l_{b,min}$ and the minimum lap length $l_{0,min}$ according to EN 1992-1-1:2011 shall be multiplied by the relevant amplification factor α_{lb} according to **Table C1.1**.

Table C1.1: Amplification factor α_{lb} related to concrete strength class and drilling method

| Hammer drilling, hollow drilling and compressed air drilling | | | | |
|--|------------------------------------|--------|--------|--------|
| Rebar ϕ [mm] | Amplification factor α_{lb} | | | |
